

**PORTFOLIO**

## Döngü Desktop & Mobile Application Design

This application brings delicious and fresh foods that cannot be sold on time in food businesses to the user at an affordable price. Döngü, offers innovative and environmentally friendly solution to prevent the waste of food to 26 million tons in Turkey.

### Döngü

In our project that we started by making benchmarks, we went to the field to analyze the user needs. In the light of the data we obtained, we created our visual language, including flows and branding studies.

Research

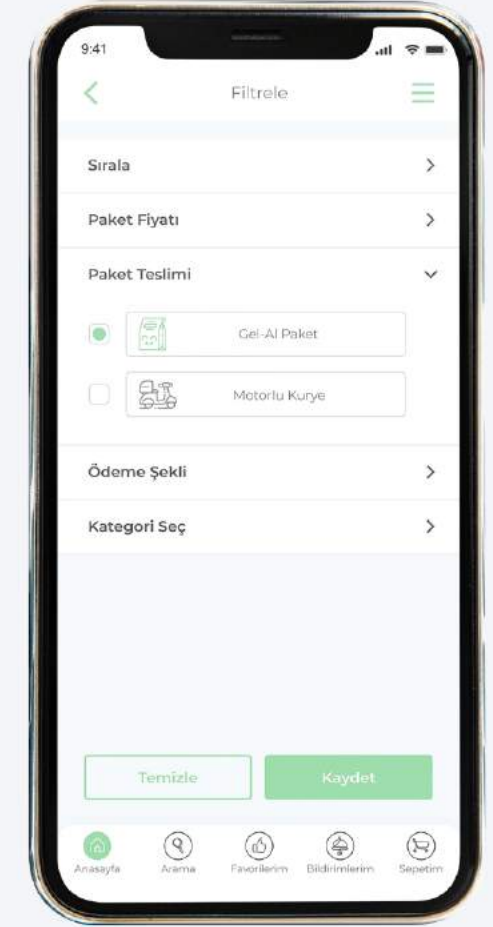

Wireframe

Interface Design

Information  
Architecture

Problem Detection

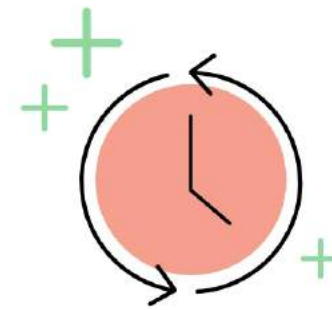

Solution Proposal

### Pay less

Get your favorite food with at least 50% discount.

### Save Time

Pick-up your delicious food or we deliver it to you

### Protect the Planet

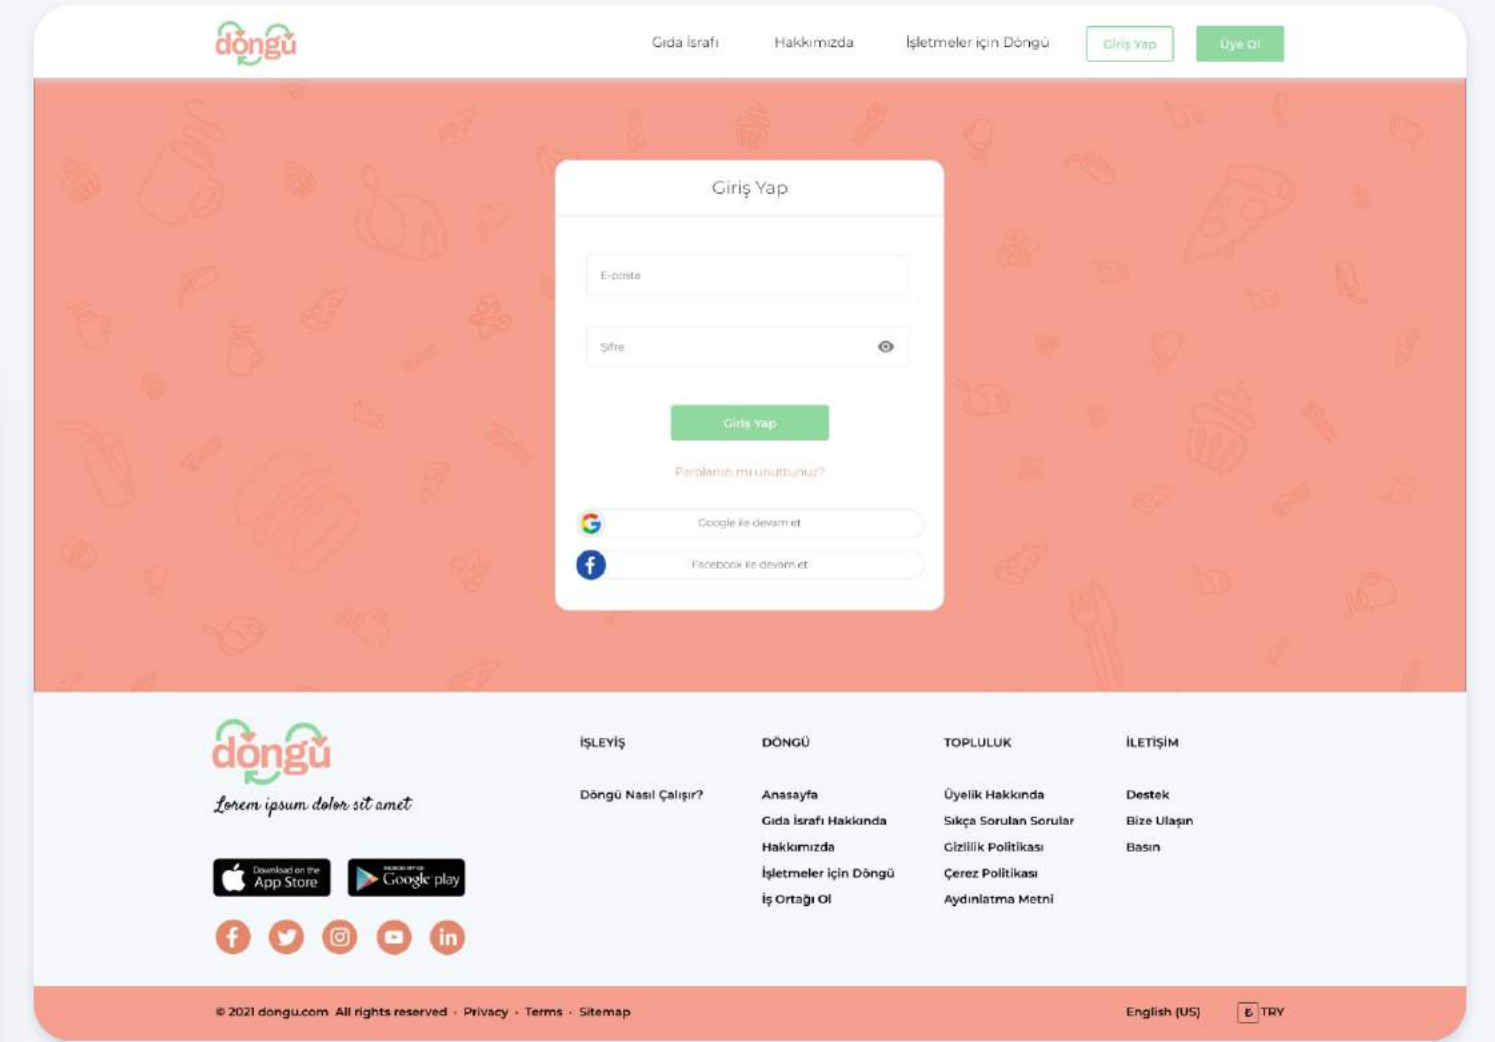

Let each bite help a greener world with less food waste.

# Döngü

## Sign-up

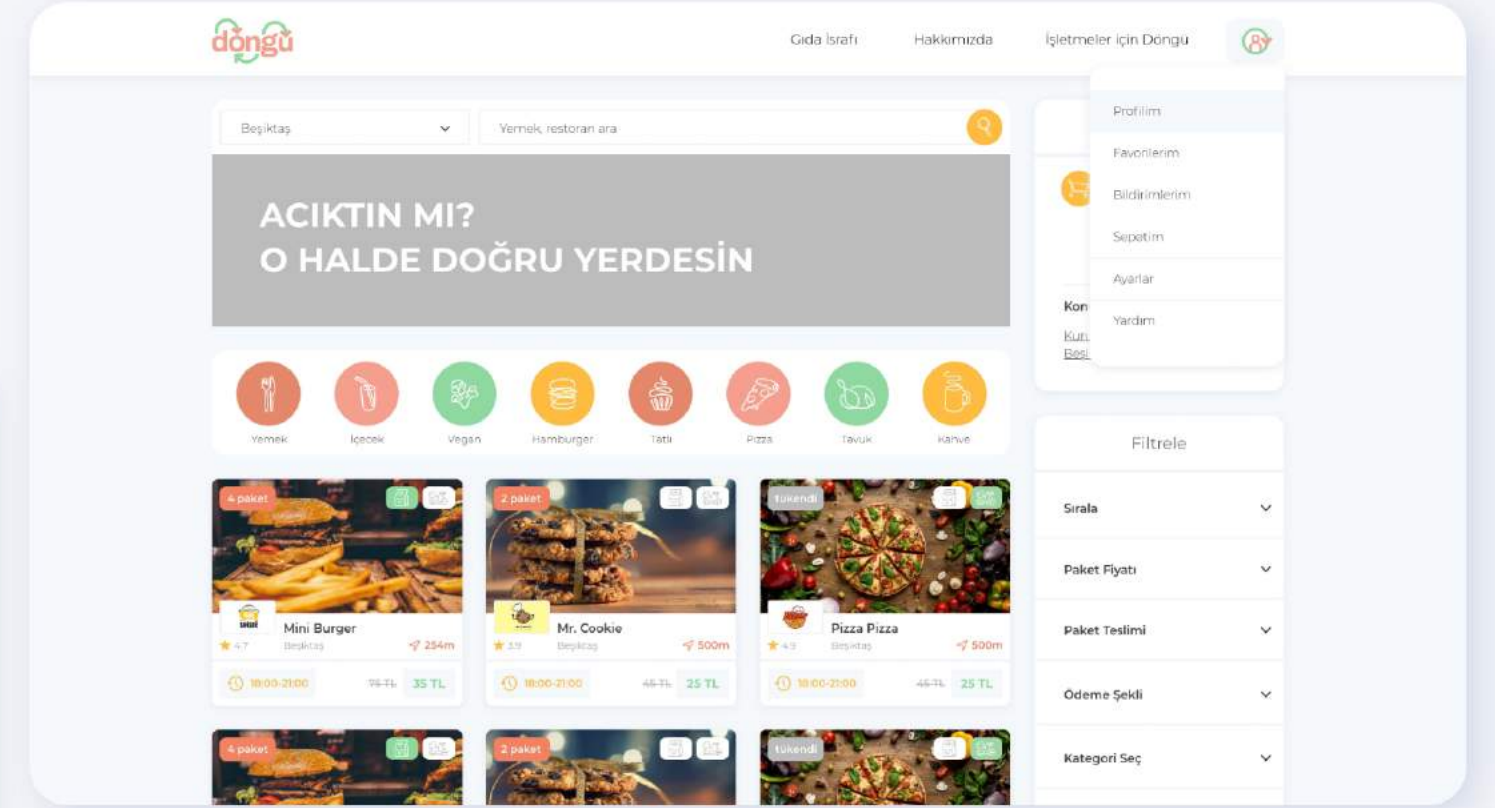

When the application is downloaded, you can browse directly on the pages and view the restaurants around. By creating membership, addresses and payment methods can be added, and the user can easily create their order.

# Döngü

## Meals / Businesses

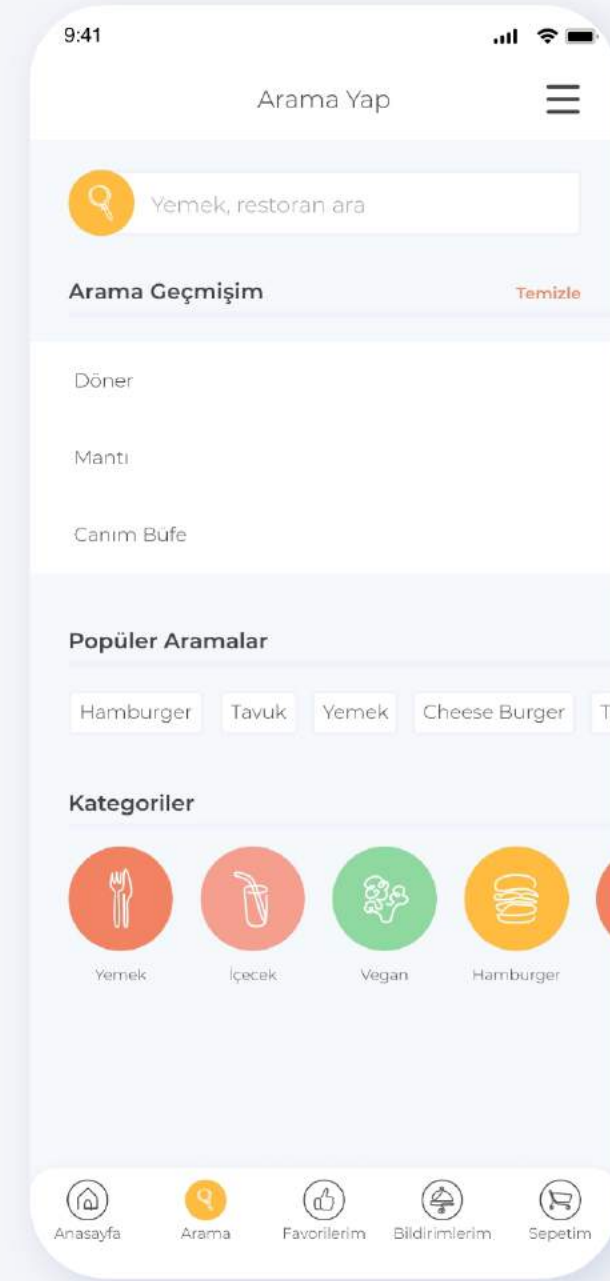

Business partners offer the usual quality and taste of their products -which they cannot sell during the day due to time constraints- as packages. Users, on the other hand, can find businesses in the surrounding area according to their location, add the businesses they like to their favorites, receive notifications about the foods that can be saved and buy from the packages offered by the business.

### Döngü

### What is in it?

Users can view the businesses around them according to the location and the average distance, choose from the food categories or search for the product they want.

## Döngü

### Store Management

Döngü partners can add packages to the system at any time and edit package settings. They can check the received orders and business ratings on the panel. They can follow the orders placed by their customers with the code defined during the order.

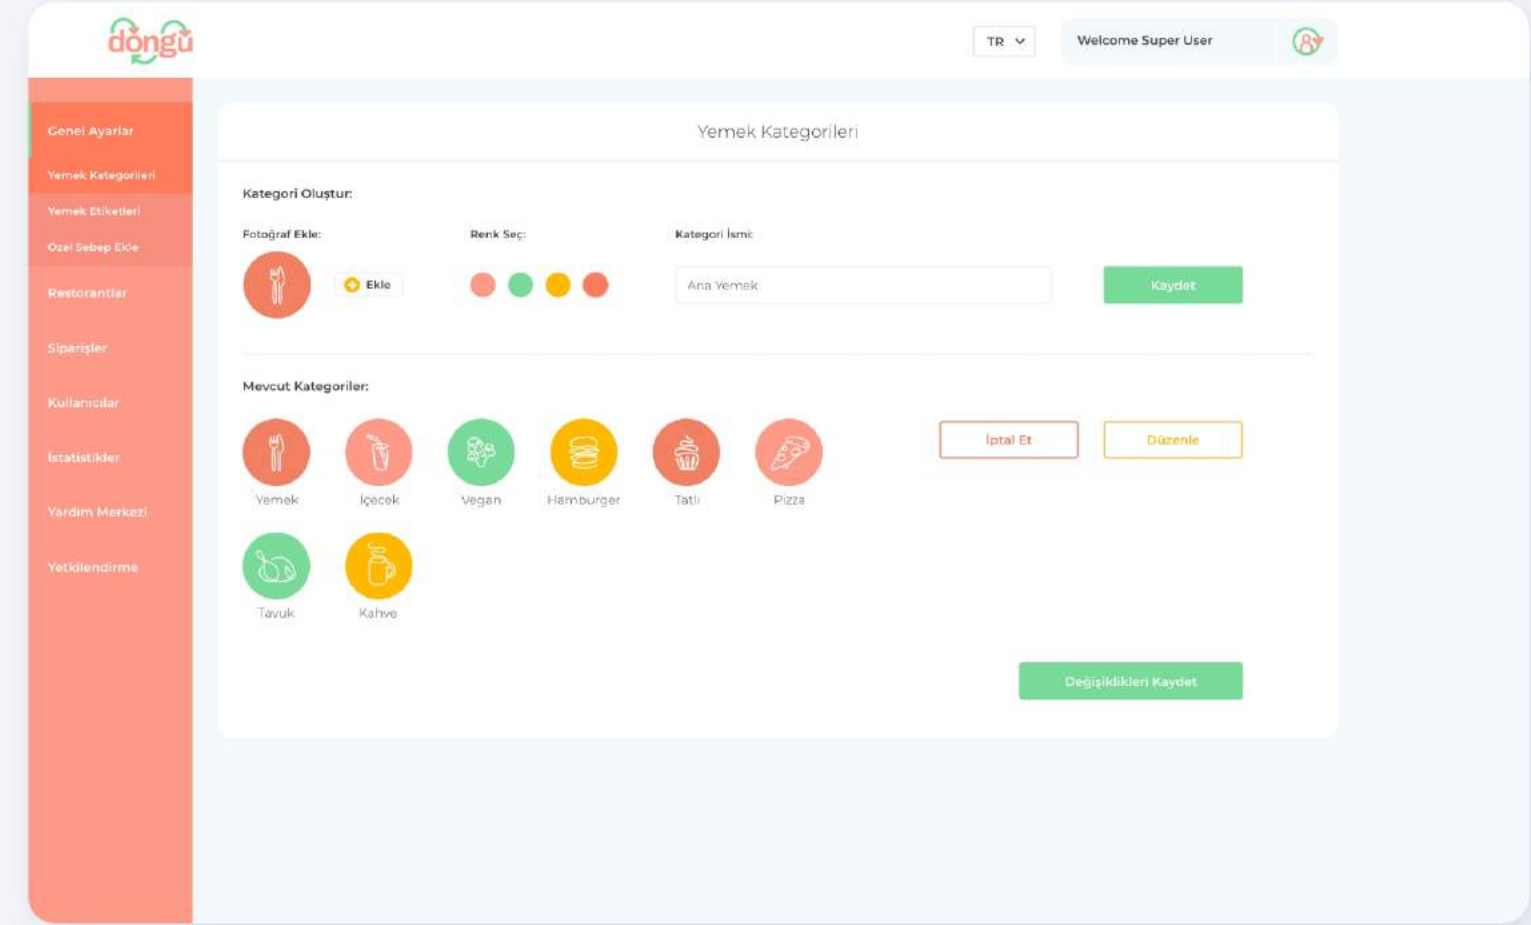

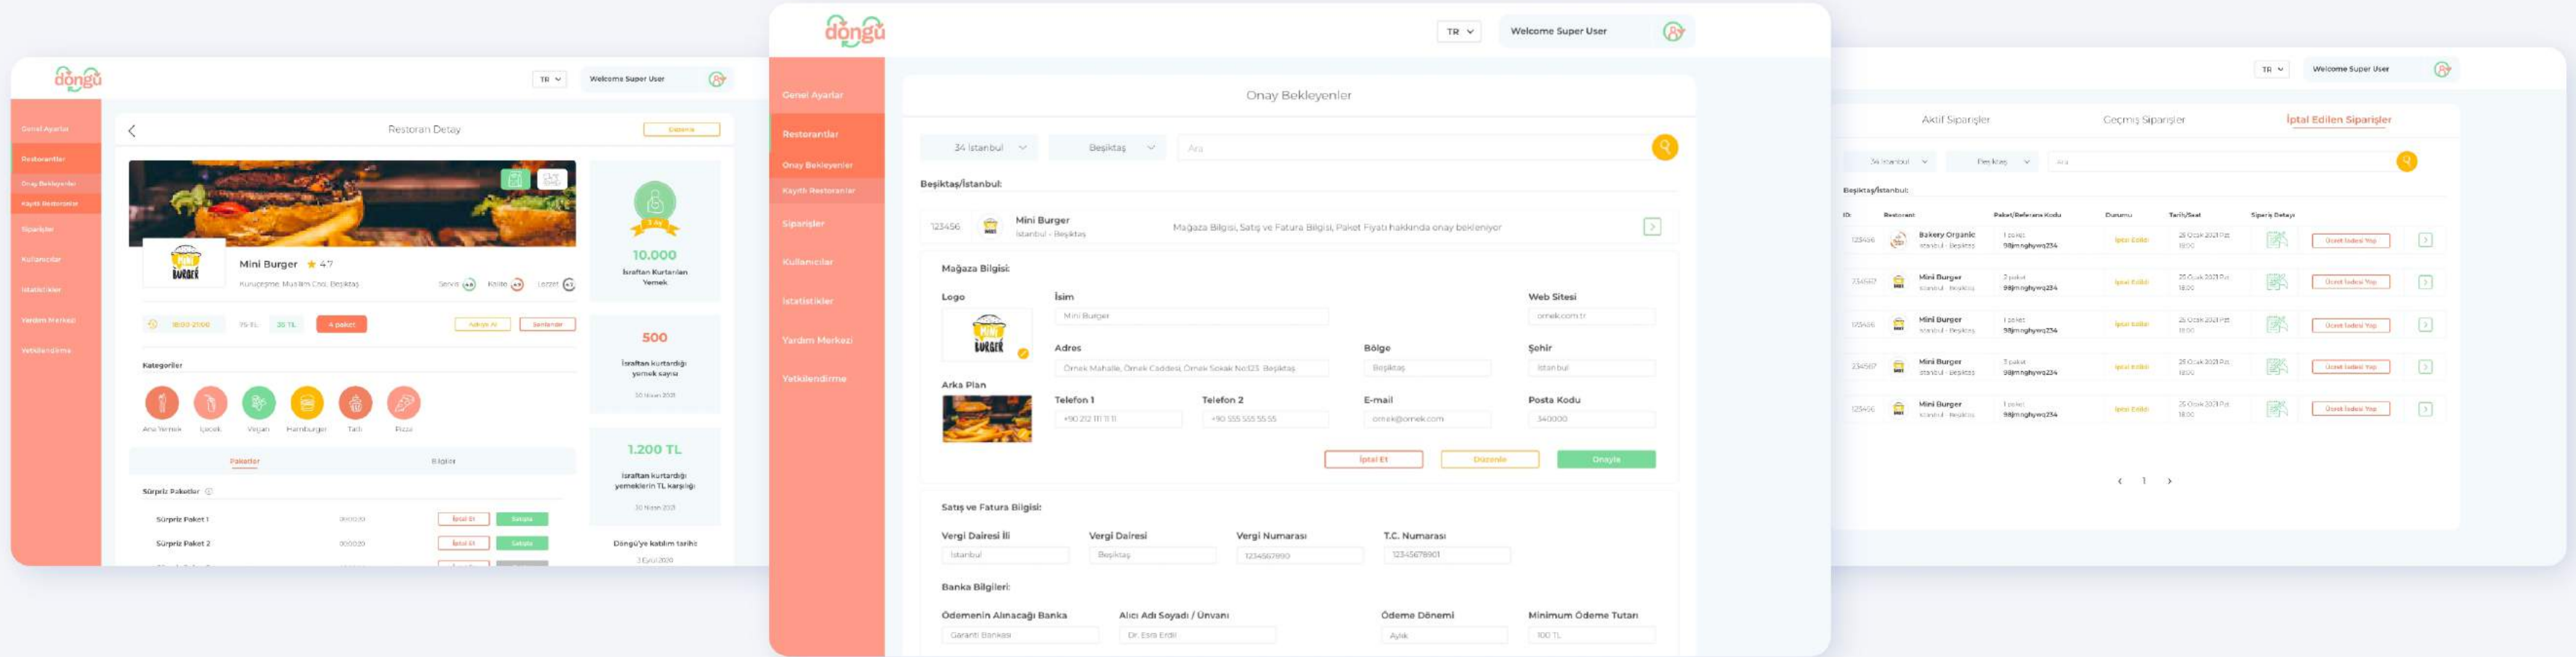

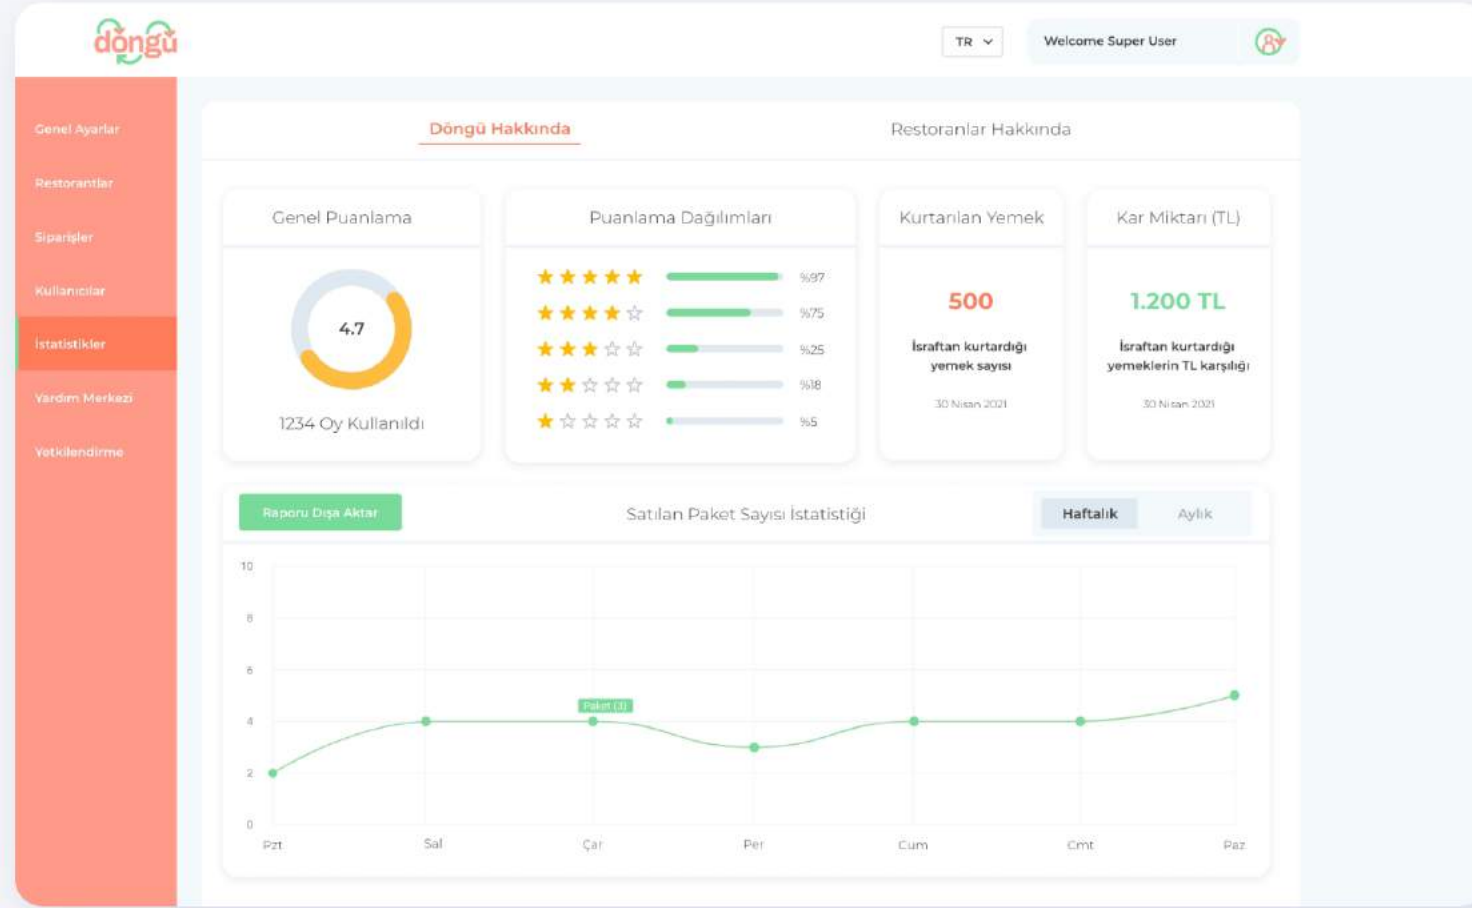

# Döngü

## Super Admin Management

It is aimed to provide the best experience to the customers by monitoring menu contents, order status, menu comments and user satisfaction through this admin control panel.

The form is titled 'Restoran Paneli İçerik Oluşturma' and includes the following sections:

- Kategori Seç:** Four buttons for selecting a category: S.S.S., Finansal, Paylaş, and Günlük İşler.
- İletişim:** Fields for 'Telefon Numarası' (+90 500 111 00 00) and 'Mail' (destek@dongu.com), with 'Kaydet' and 'Düzenle' buttons.
- İçerik Oluştur:** A section for creating content, including a 'Soru' (Question) field and a 'Cevap' (Answer) text area.
- Mevcut Sorular/Cevaplar:** A section for existing questions and answers.

Download the DÖNGÜ mobile app,  
save both the environment  
and your budget!

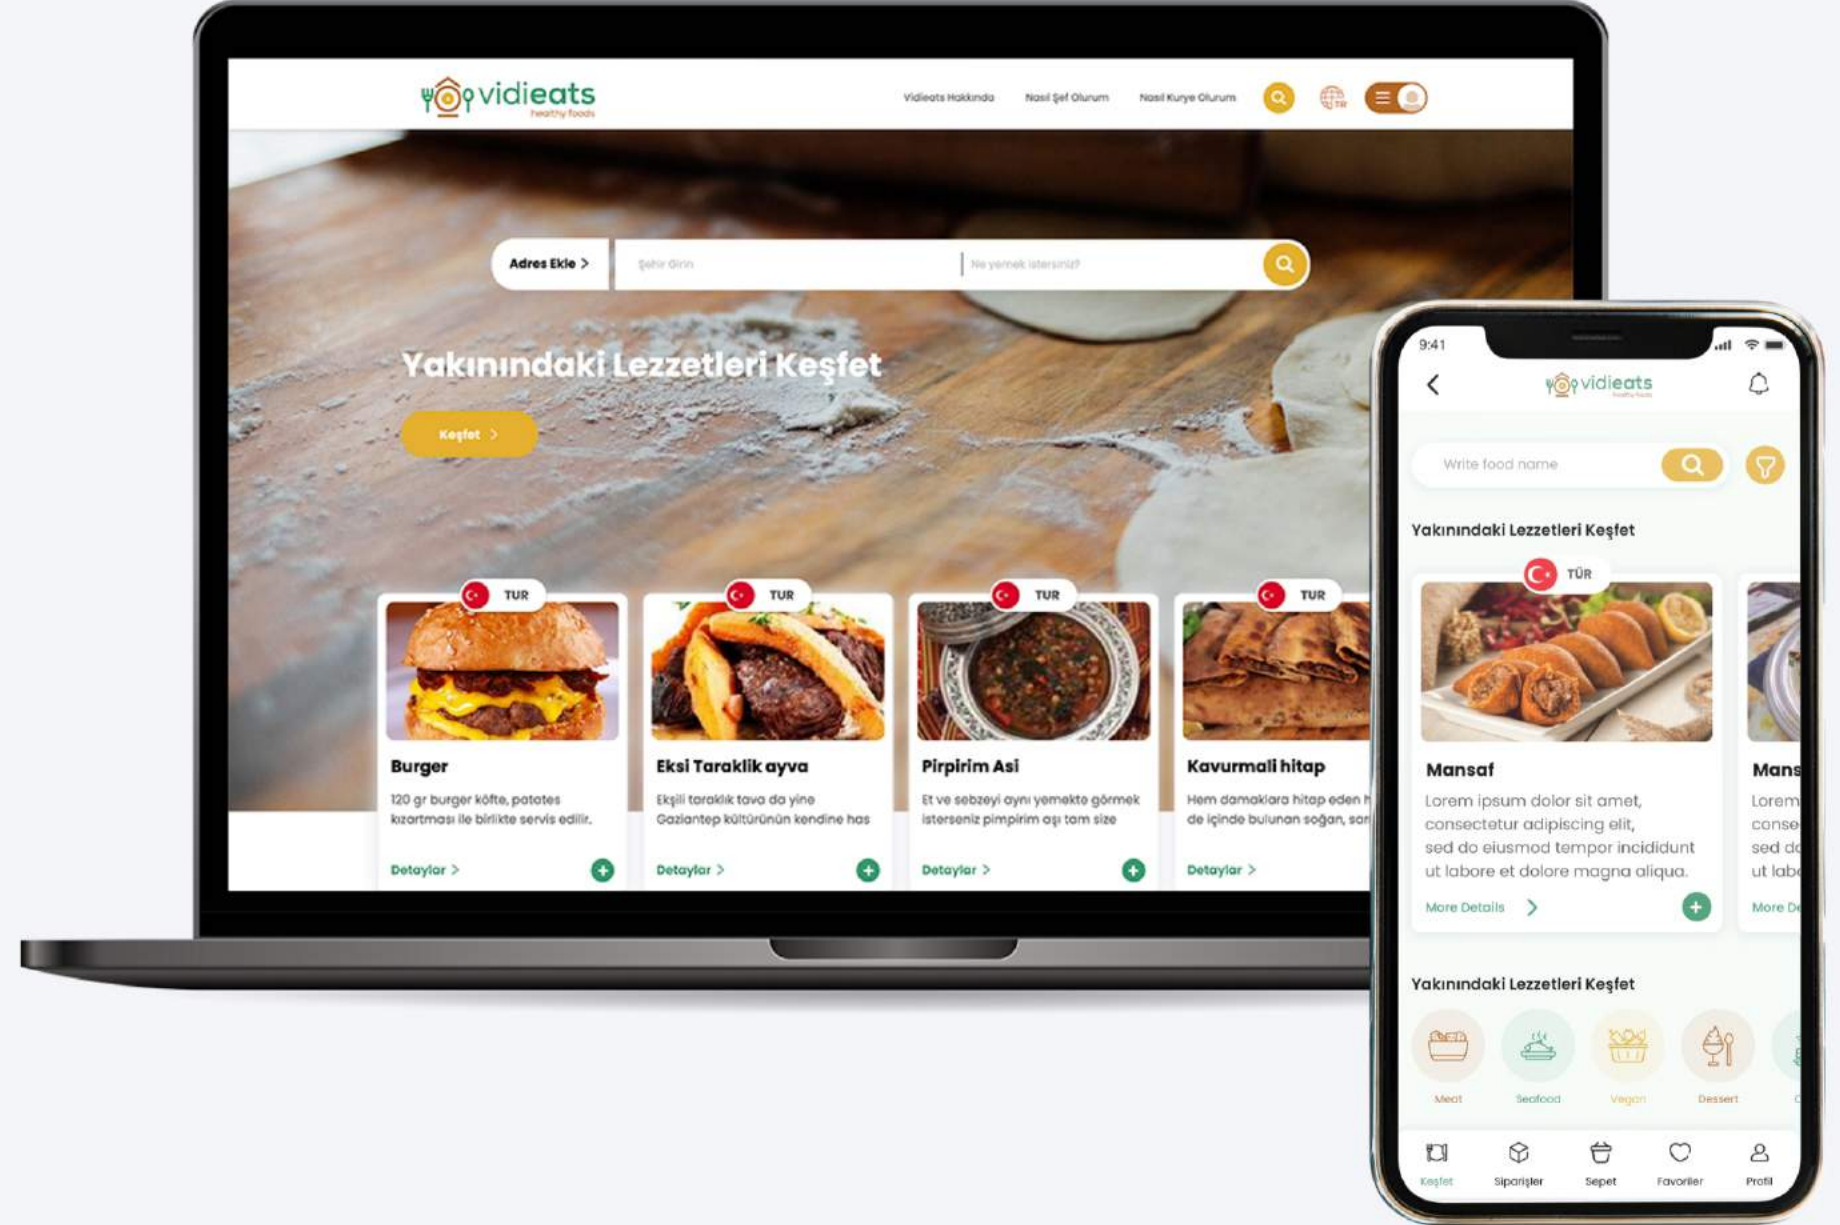

## Vidieats Desktop & Mobile Application Design

It is an online platform that offers the meals prepared by the chefs who can cook healthy and delicious meals in their own homes, to people who work or do not want to spend time for preparing meals. Users can have their foods, whenever they want, ready in their homes with a few clicks.

# Vidieats

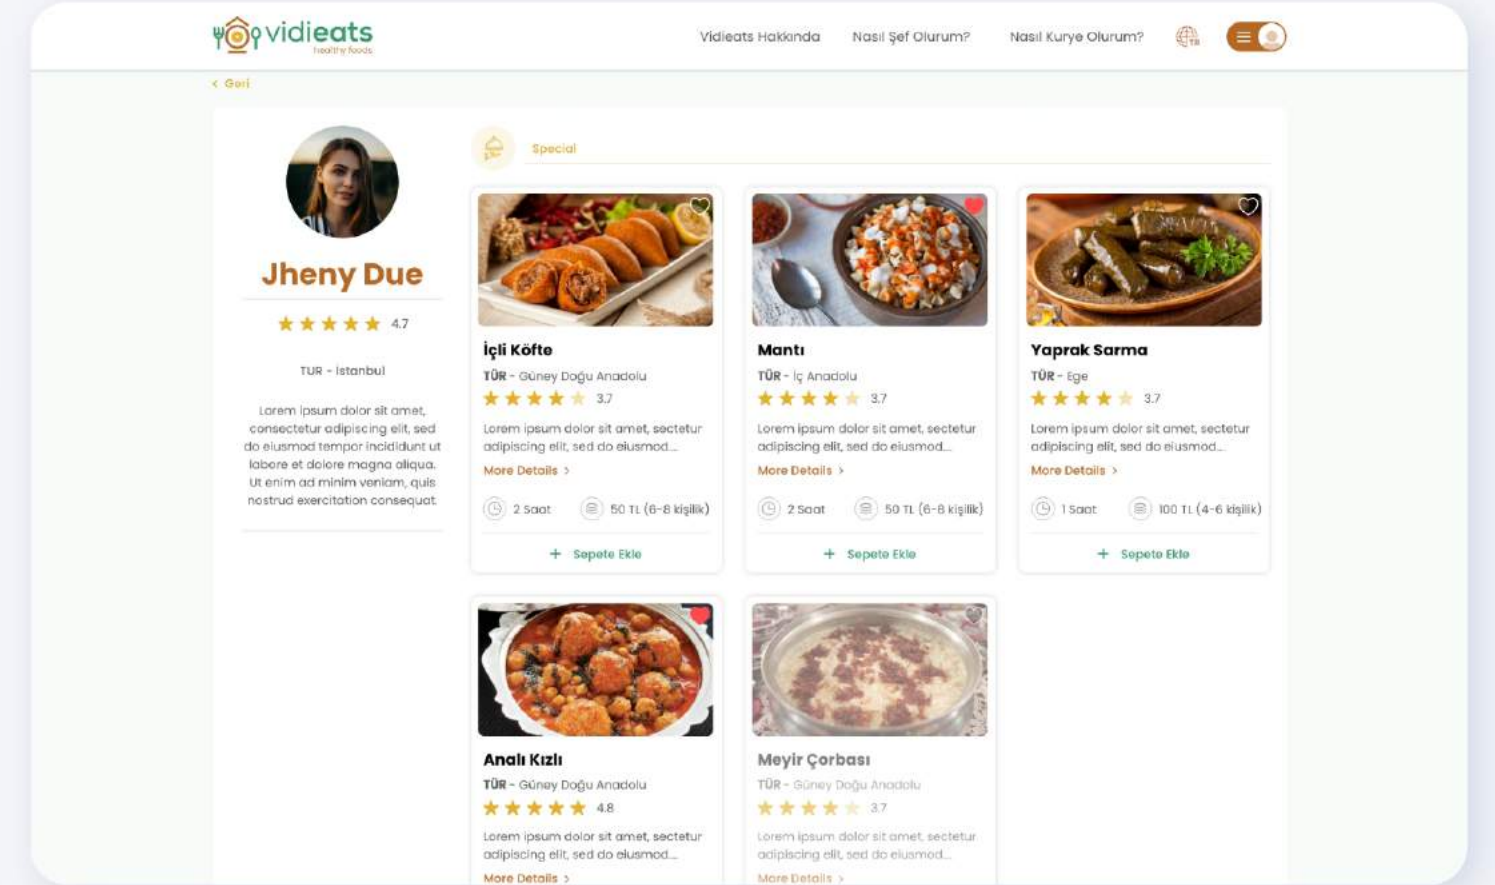

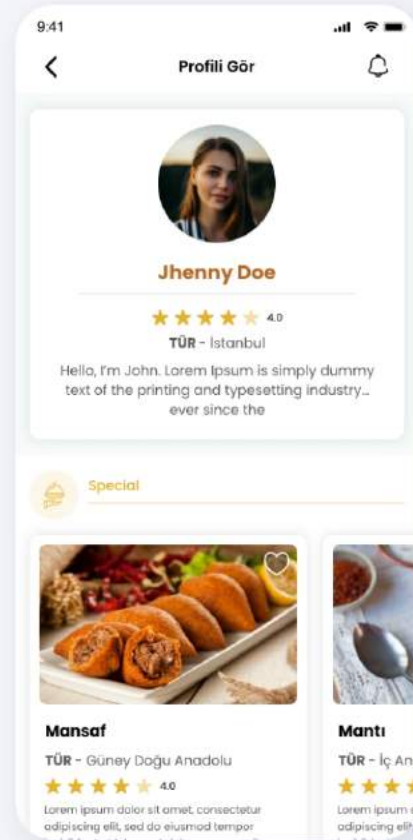

We started the design process by understanding where the users had problems, what they did not want, what they liked more or simply their needs and behaviors. After designing the information architecture and flows, we designed stylish interfaces that support the brand, in line with current trends.

Research

Wireframe

Interface Design

Information  
Architecture

You can find global and local food wherever you are.

Once you've decided on your favorite dish, create an order to be delivered at the time you want to your place.

You can also contact our chefs for your special requests.

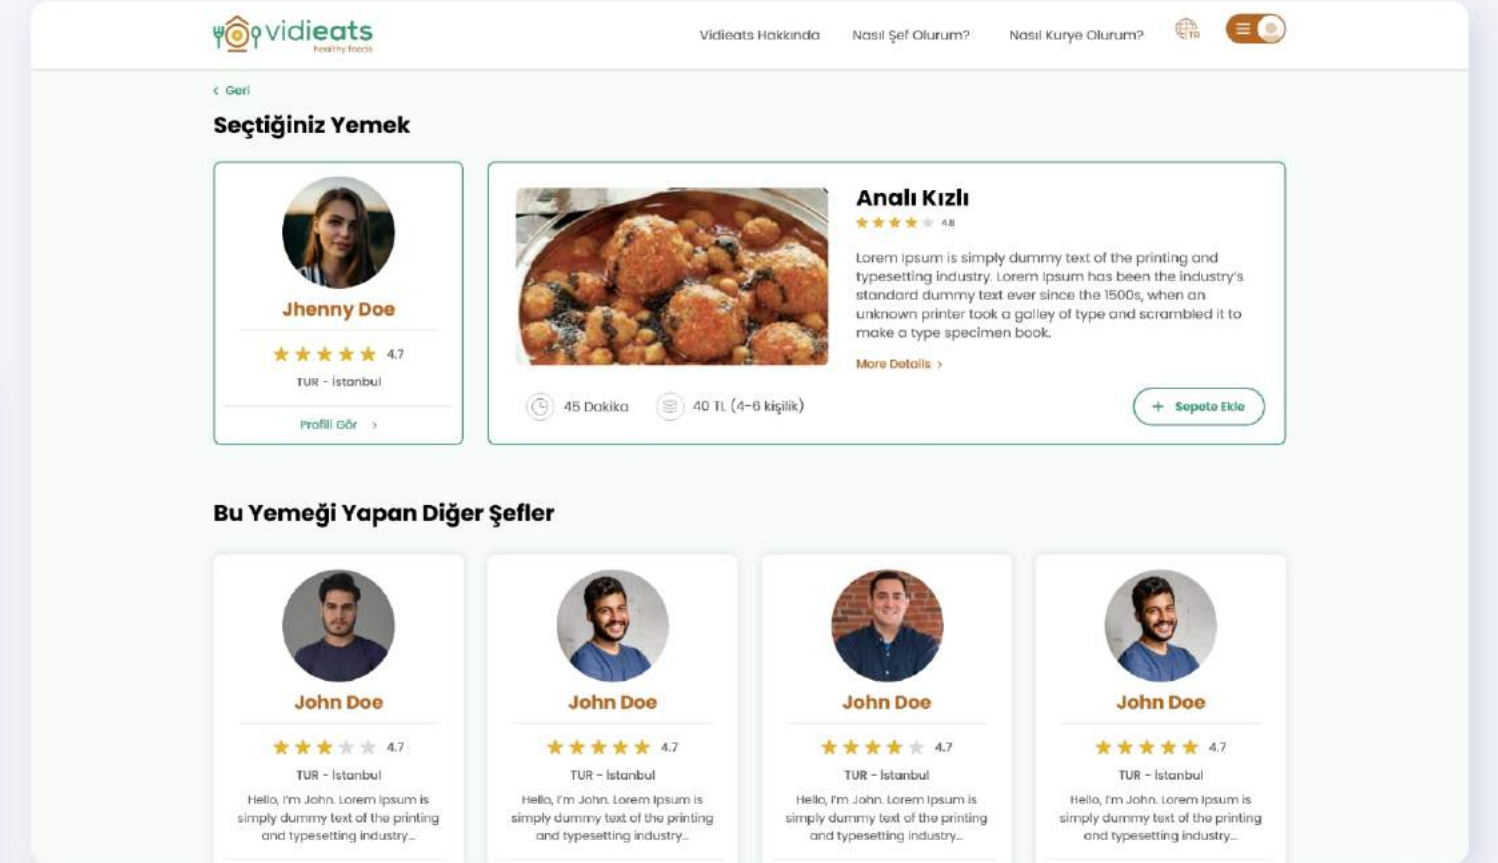

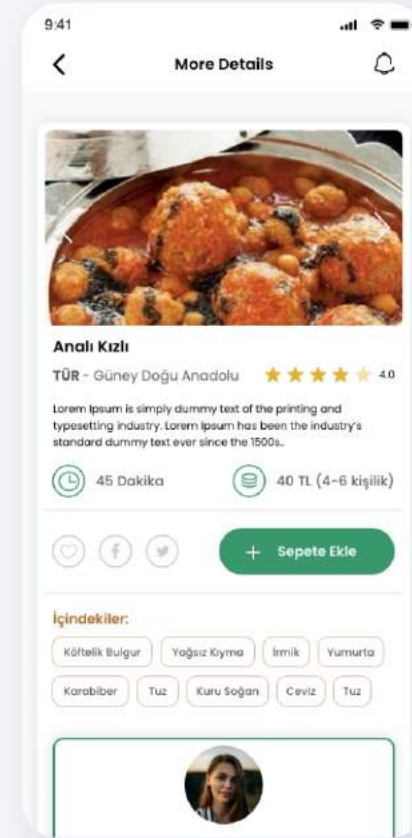

The chefs cook the food you want, the couriers deliver it to you, and you can follow the whole process.

# Vidieats

## Meal Selection

The user can select the desired food by filtering on the map showing the chefs in the region. Users can view and order the selected dish from the recommended chef and complete their order.

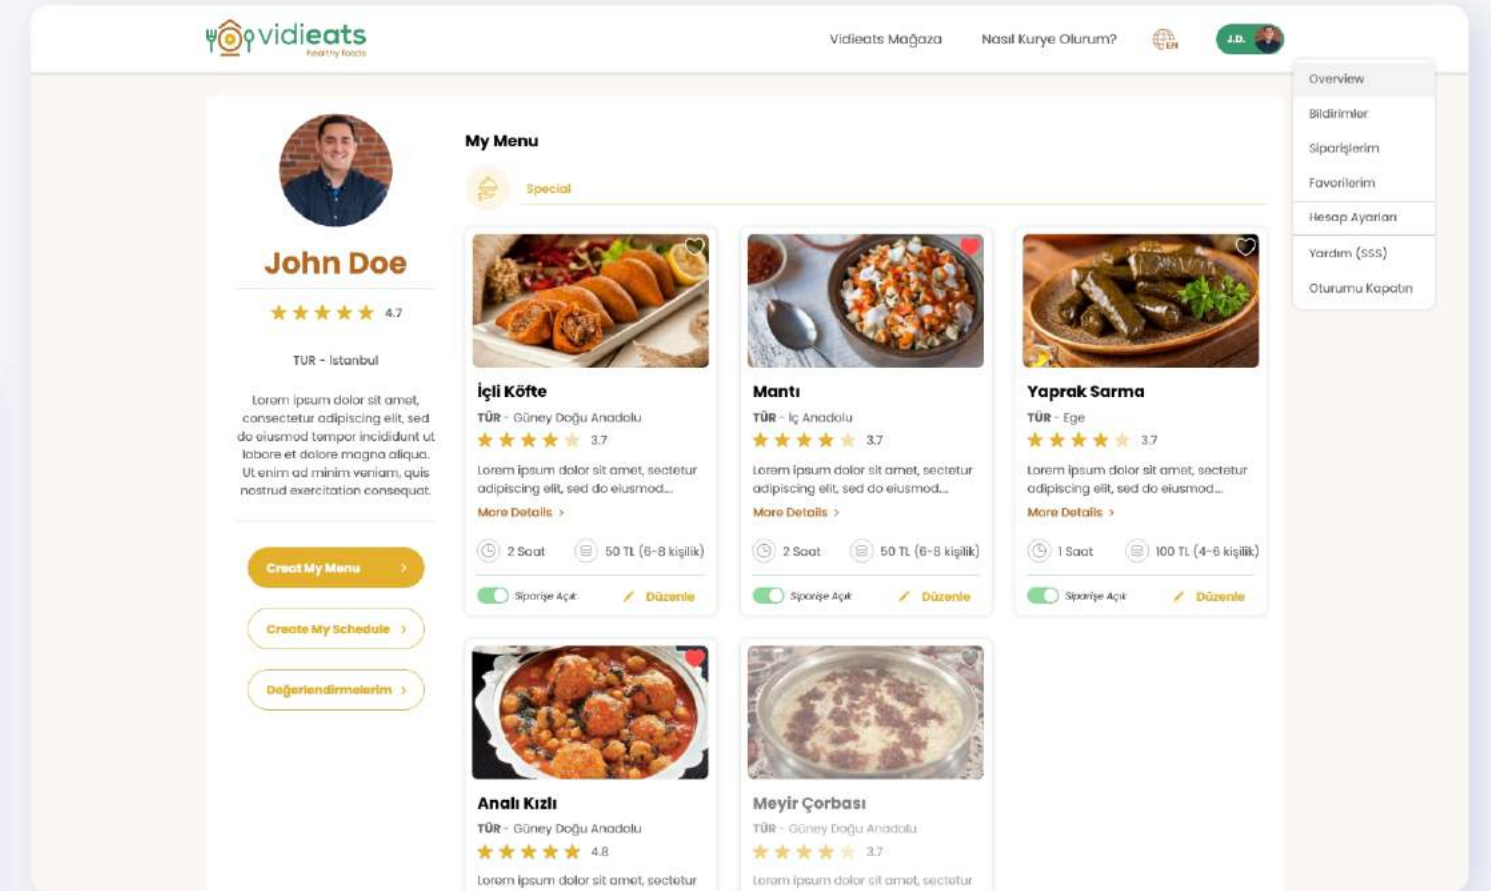

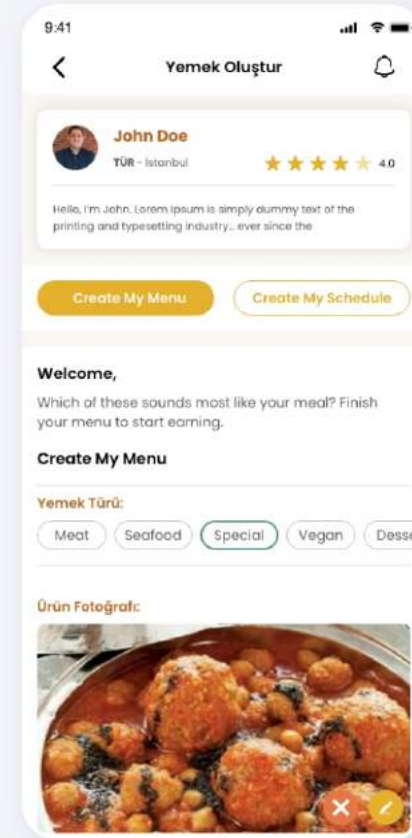

# Vidieats

## Chef's Menu Panel

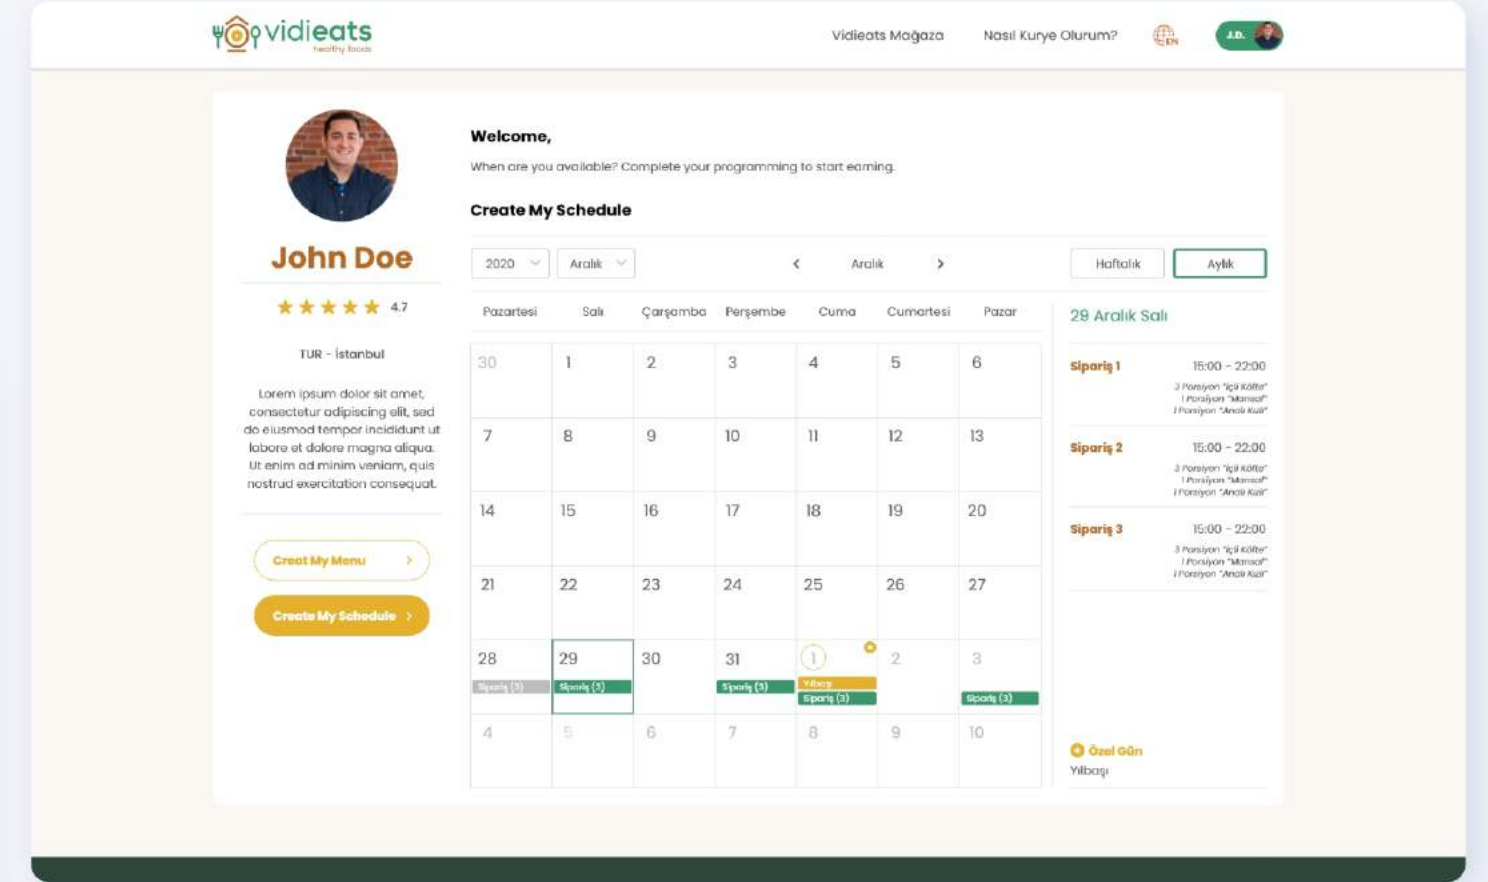

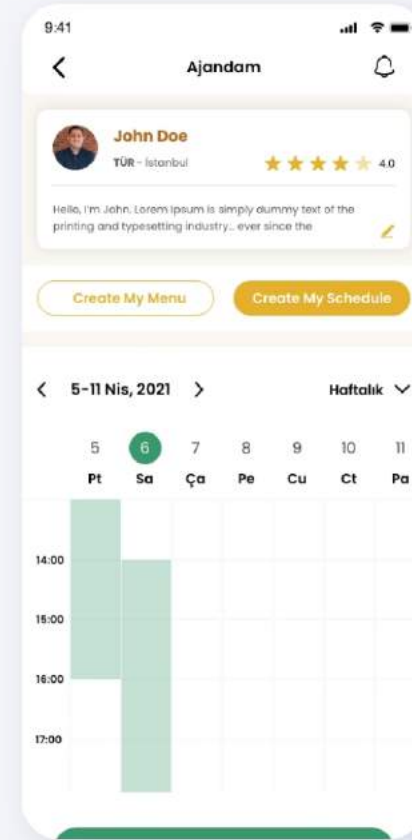

Corporate or individual users can purchase any food from the chef's menu, instantly or on a later date. They can order a meal to the chef on a certain day and portion, and send the details to the chef via direct message. Orders are delivered by courier closest to the home / workplace on the desired day and time.

# Vidieats

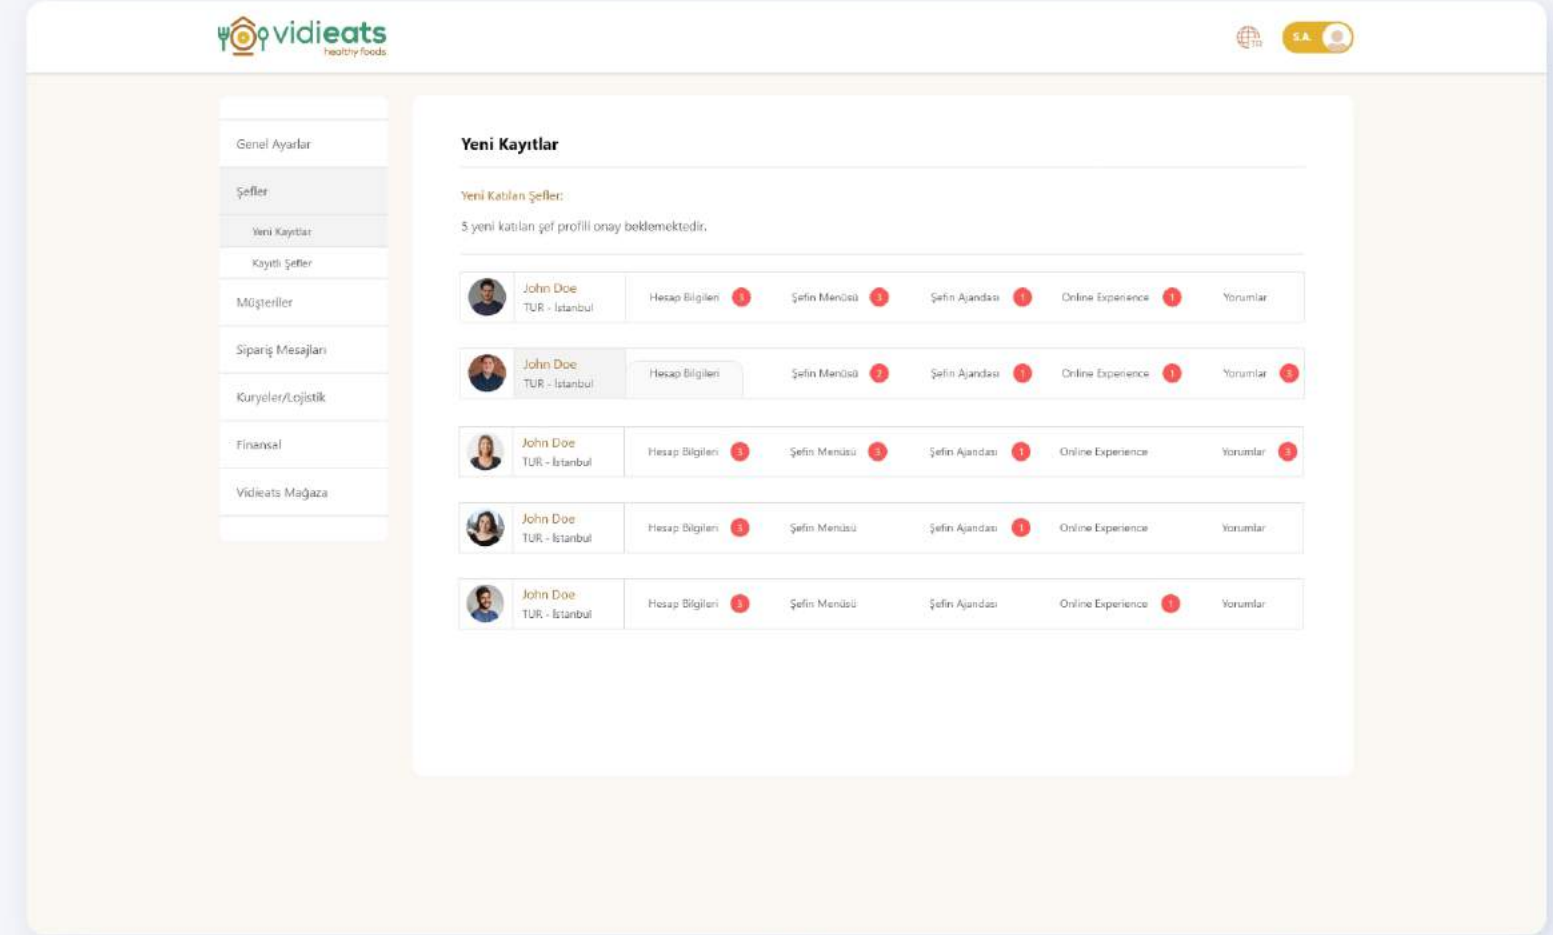

## Chef's Agenda

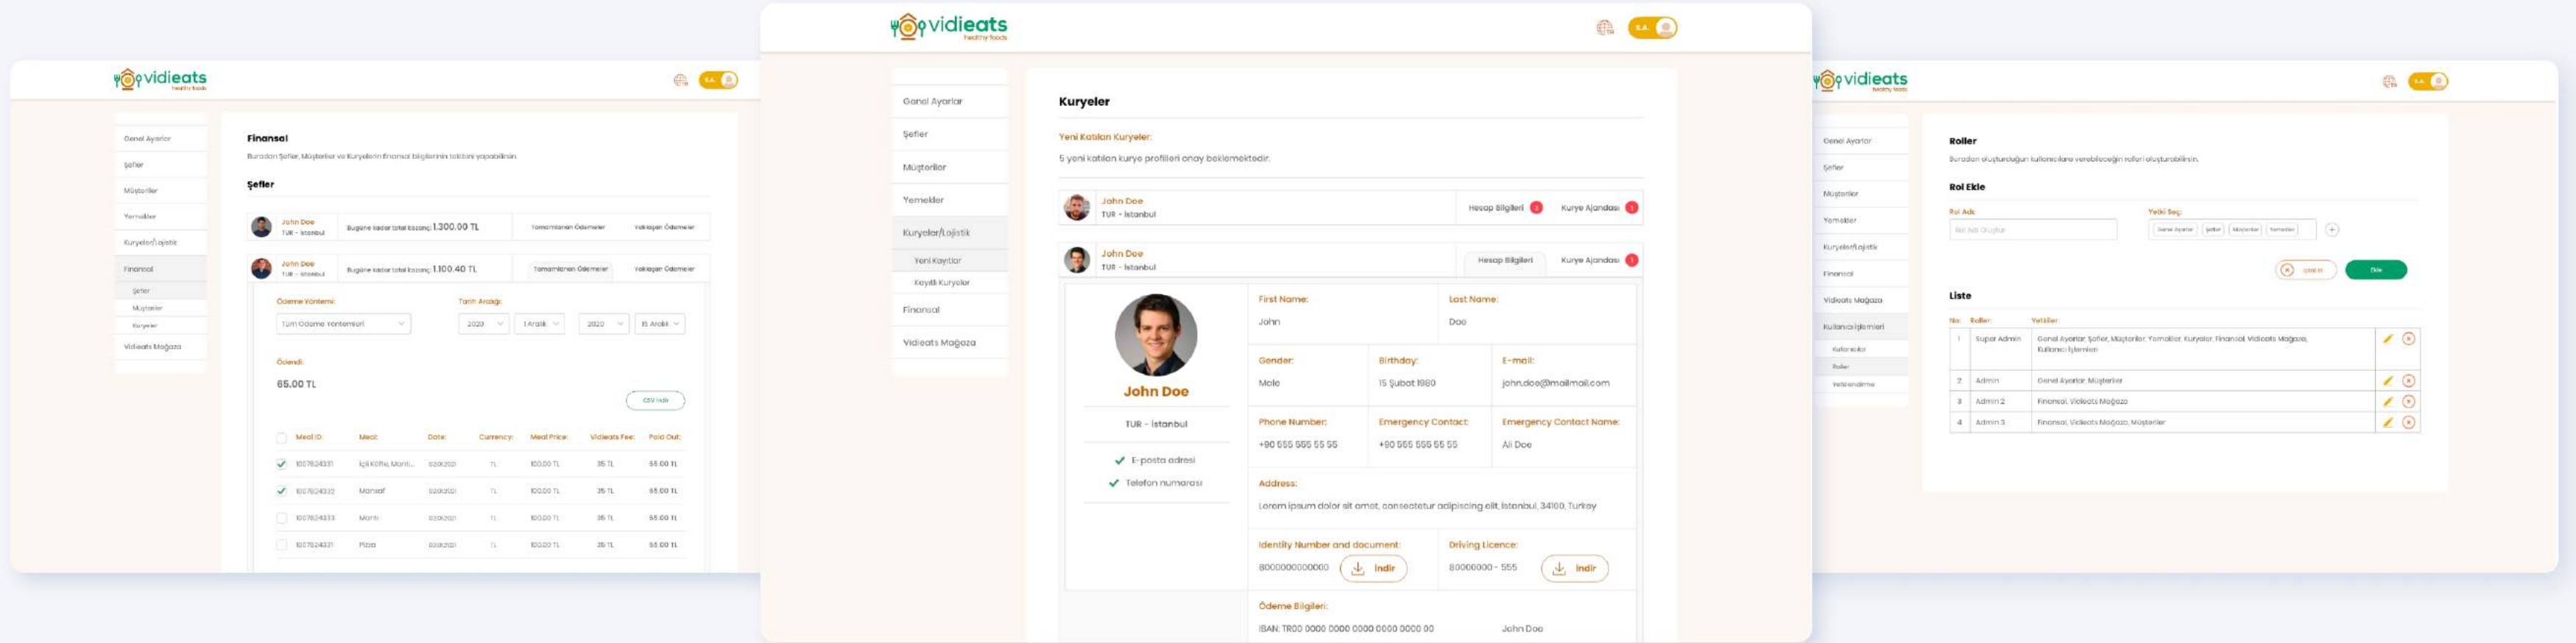

Chefs can plan the days they will work and receive orders on the monthly or weekly calendar according to their availability. They can also view all their past / future orders on this calendar.

### Vidieats

It is aimed to provide the best experience to the customers by monitoring the certificates of the chefs, menu contents, order status, menu comments and user satisfaction through this admin control panel.

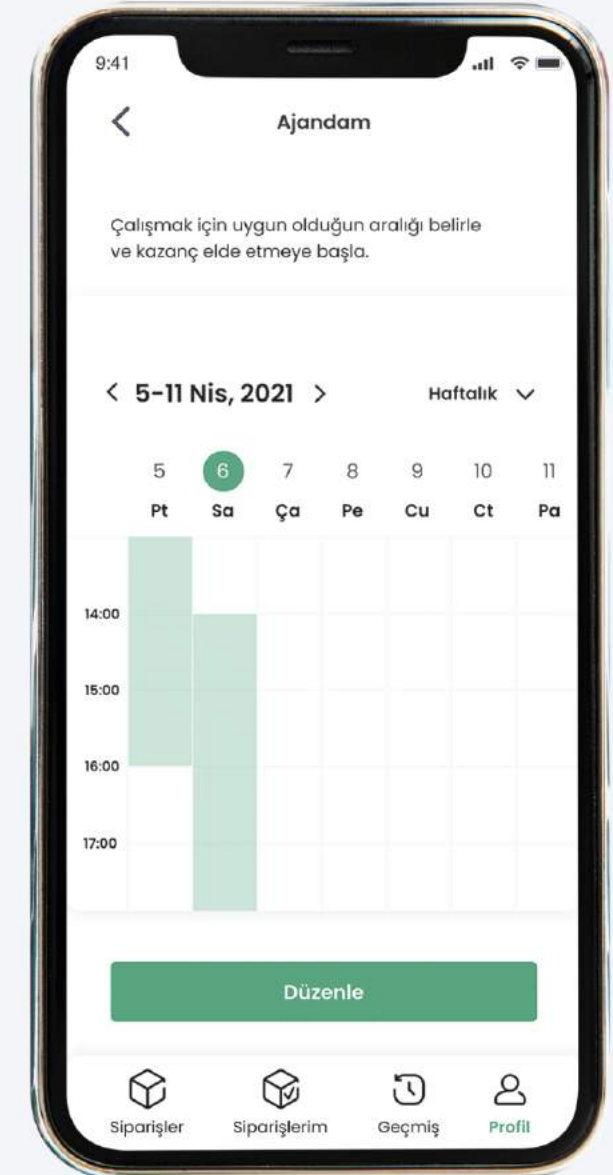

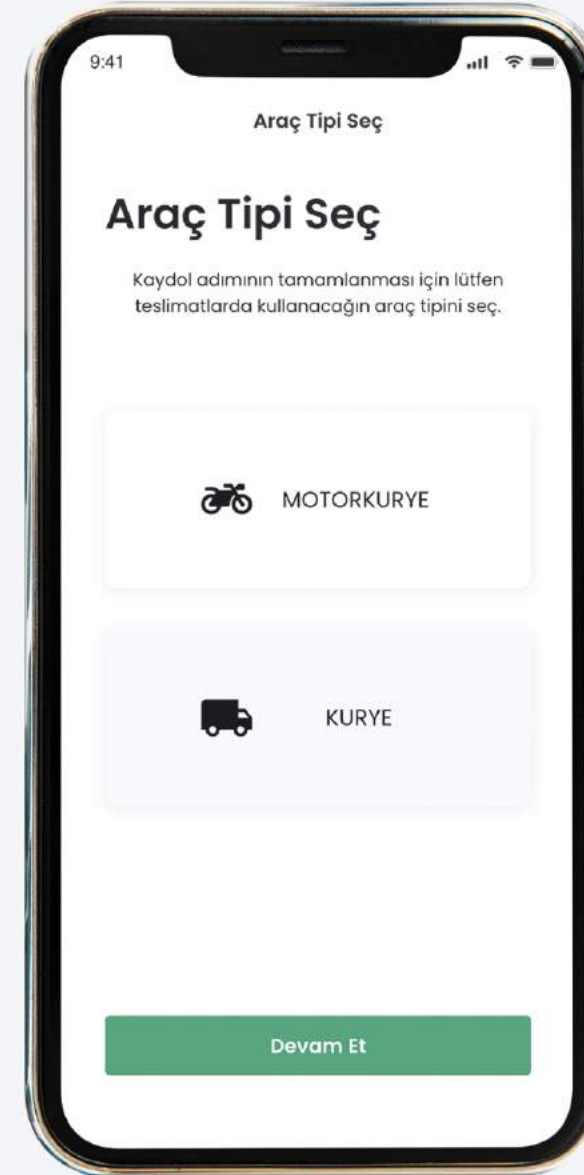

### Vidieats Kurye App

### Select Vehicle Type / Agenda Section

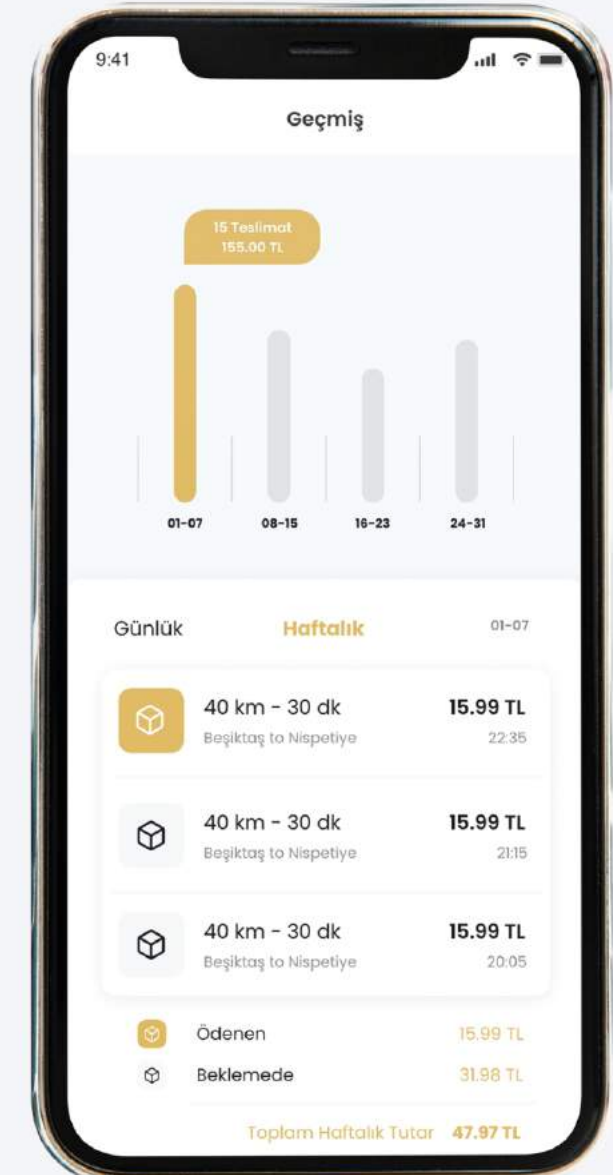

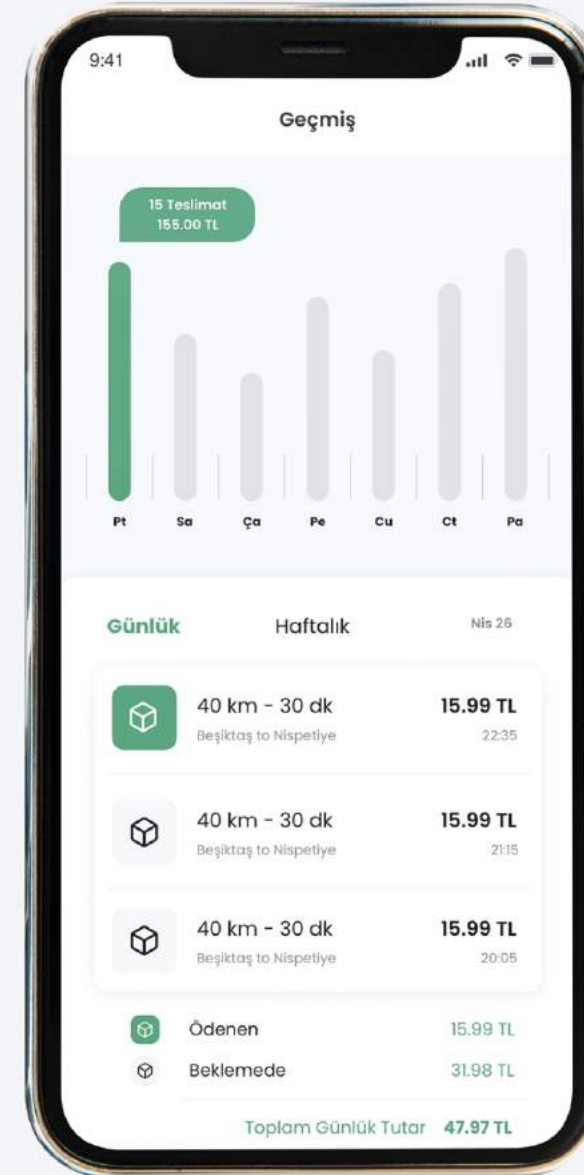

Users and chefs can work in Vidieats as courier, either with their motors or their cars. Couriers can set their working hours and days on the agenda. In this way, the couriers earn profits at the times they determine.

# Vidieats

## Delivery History Section

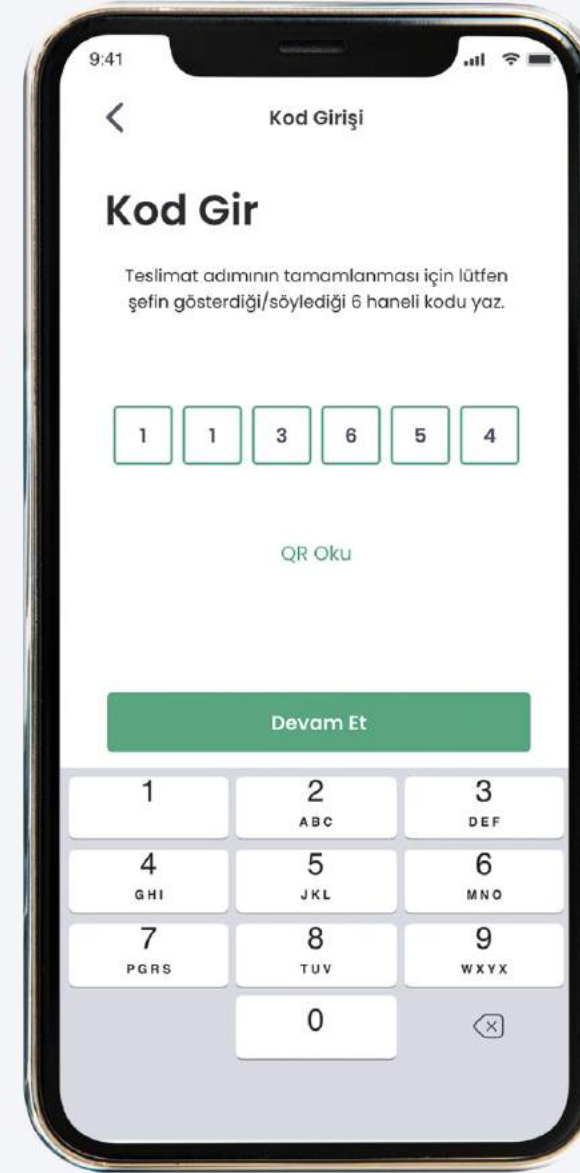

Couriers can view the summary of the packages they have delivered on a daily and weekly basis from the history section.

## Vidieats

### Couriers Receiving Packages From Chefs

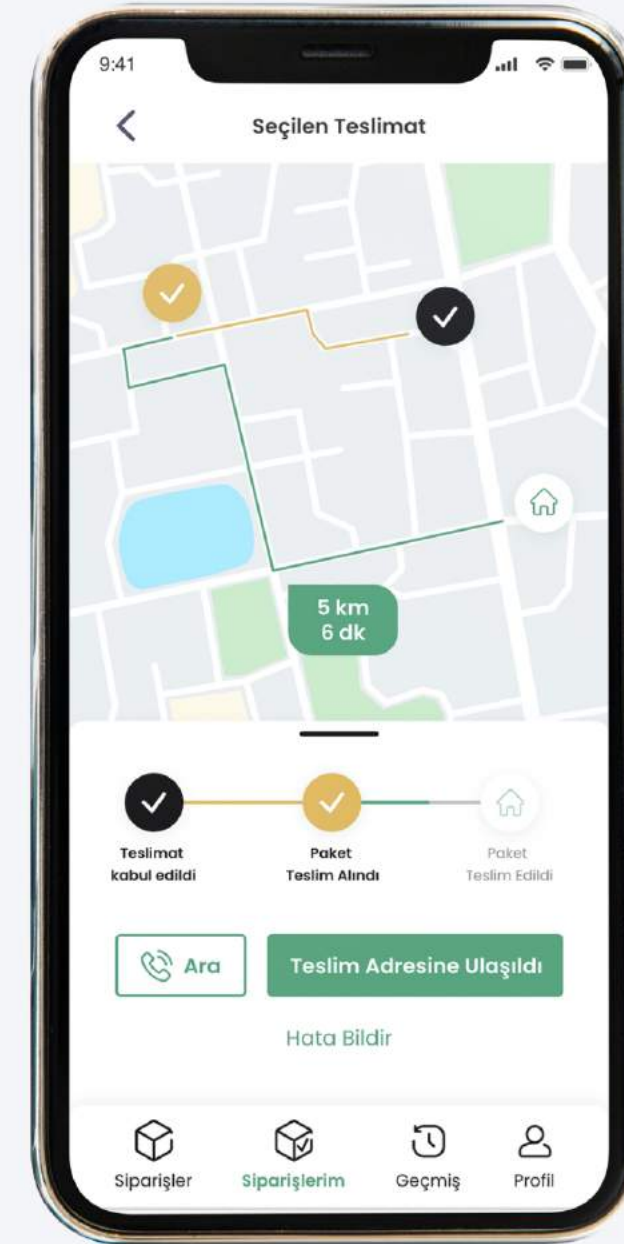

Couriers pick up the order from the chefs with a special code and deliver it to the relevant address.

# Vidieats

## Delivery Detail

Couriers send orders prepared by chefs as “delivery accepted, package received and package delivered”.

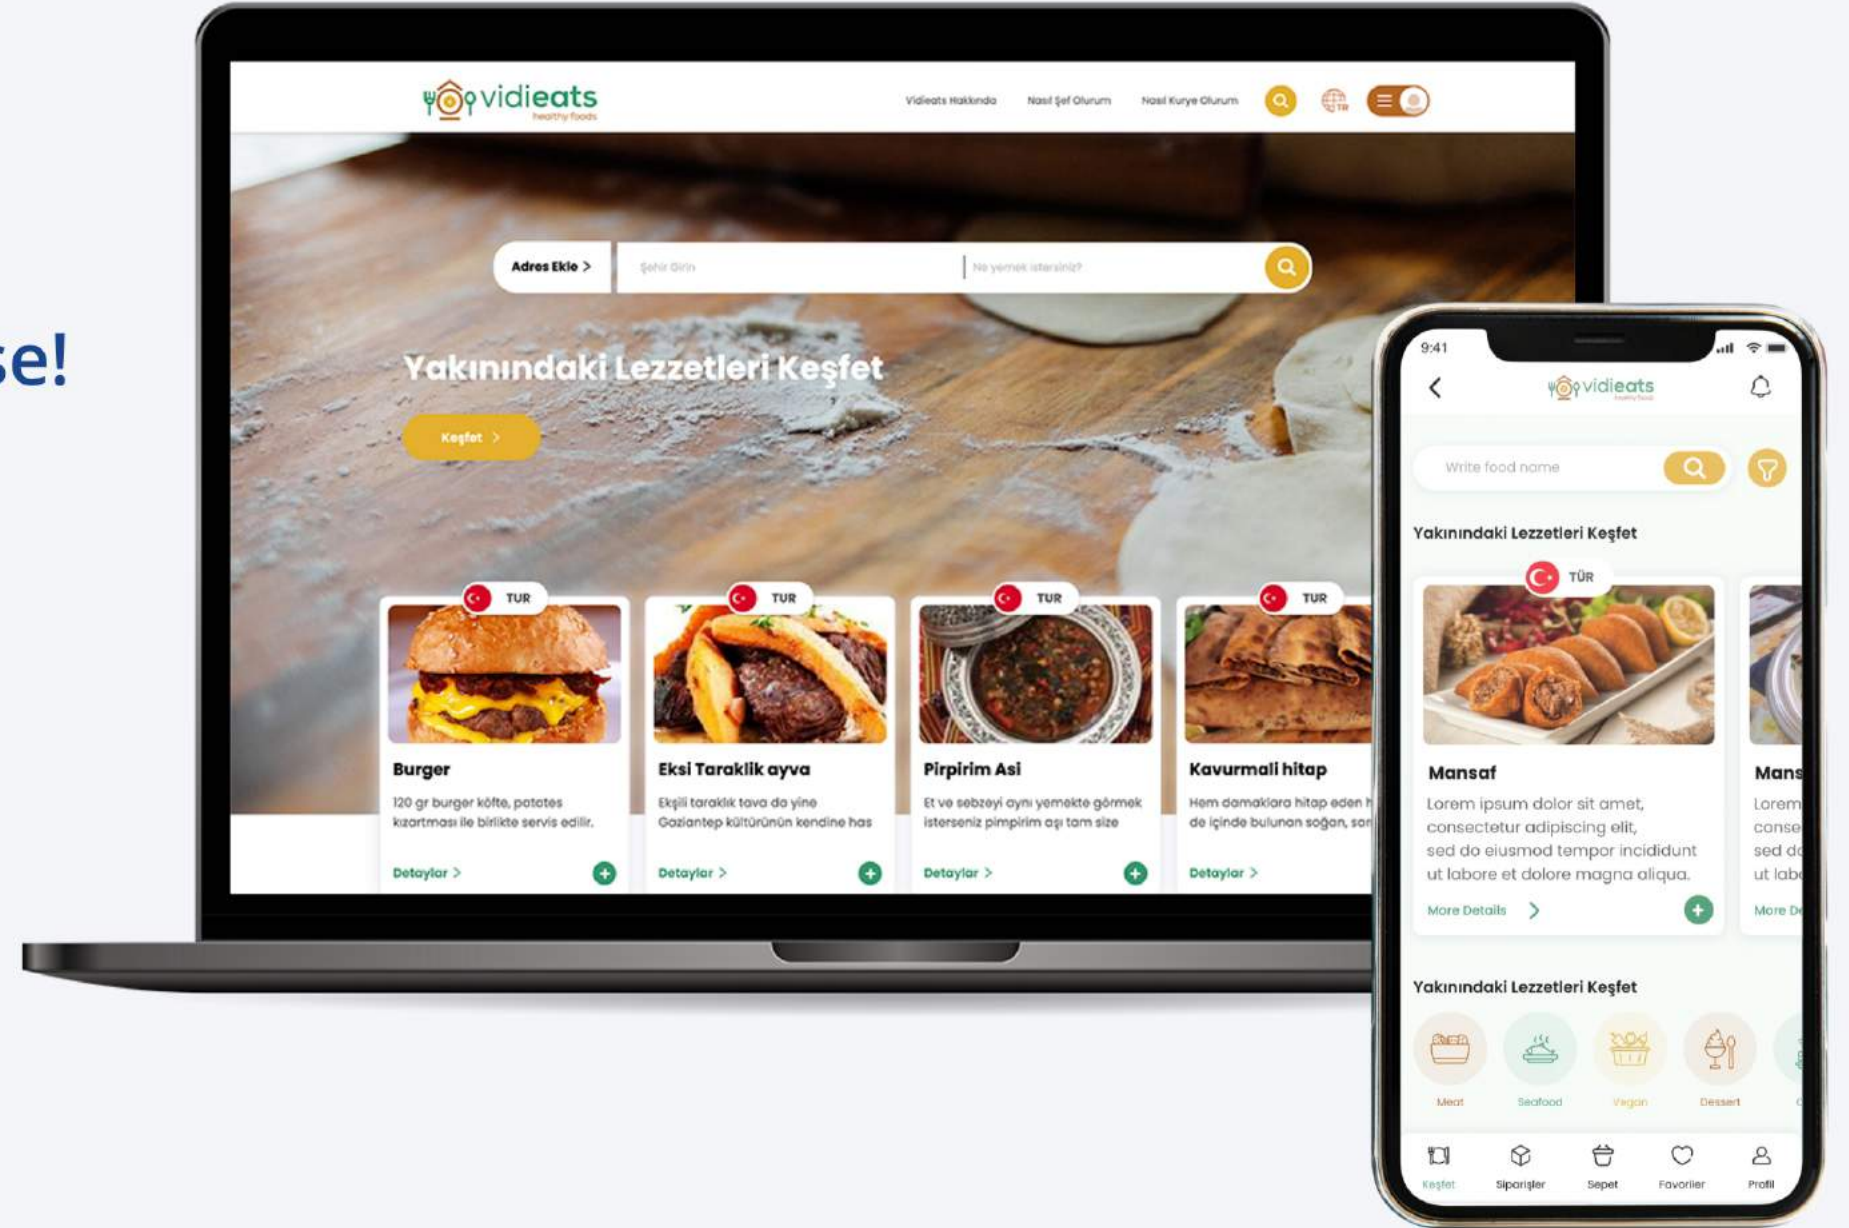

VIDIEATS platform is in testing phase!  
It will be available shortly on  
[vidieats.com](https://vidieats.com)

Available on the  
App Store

GET IT ON  
Google Play

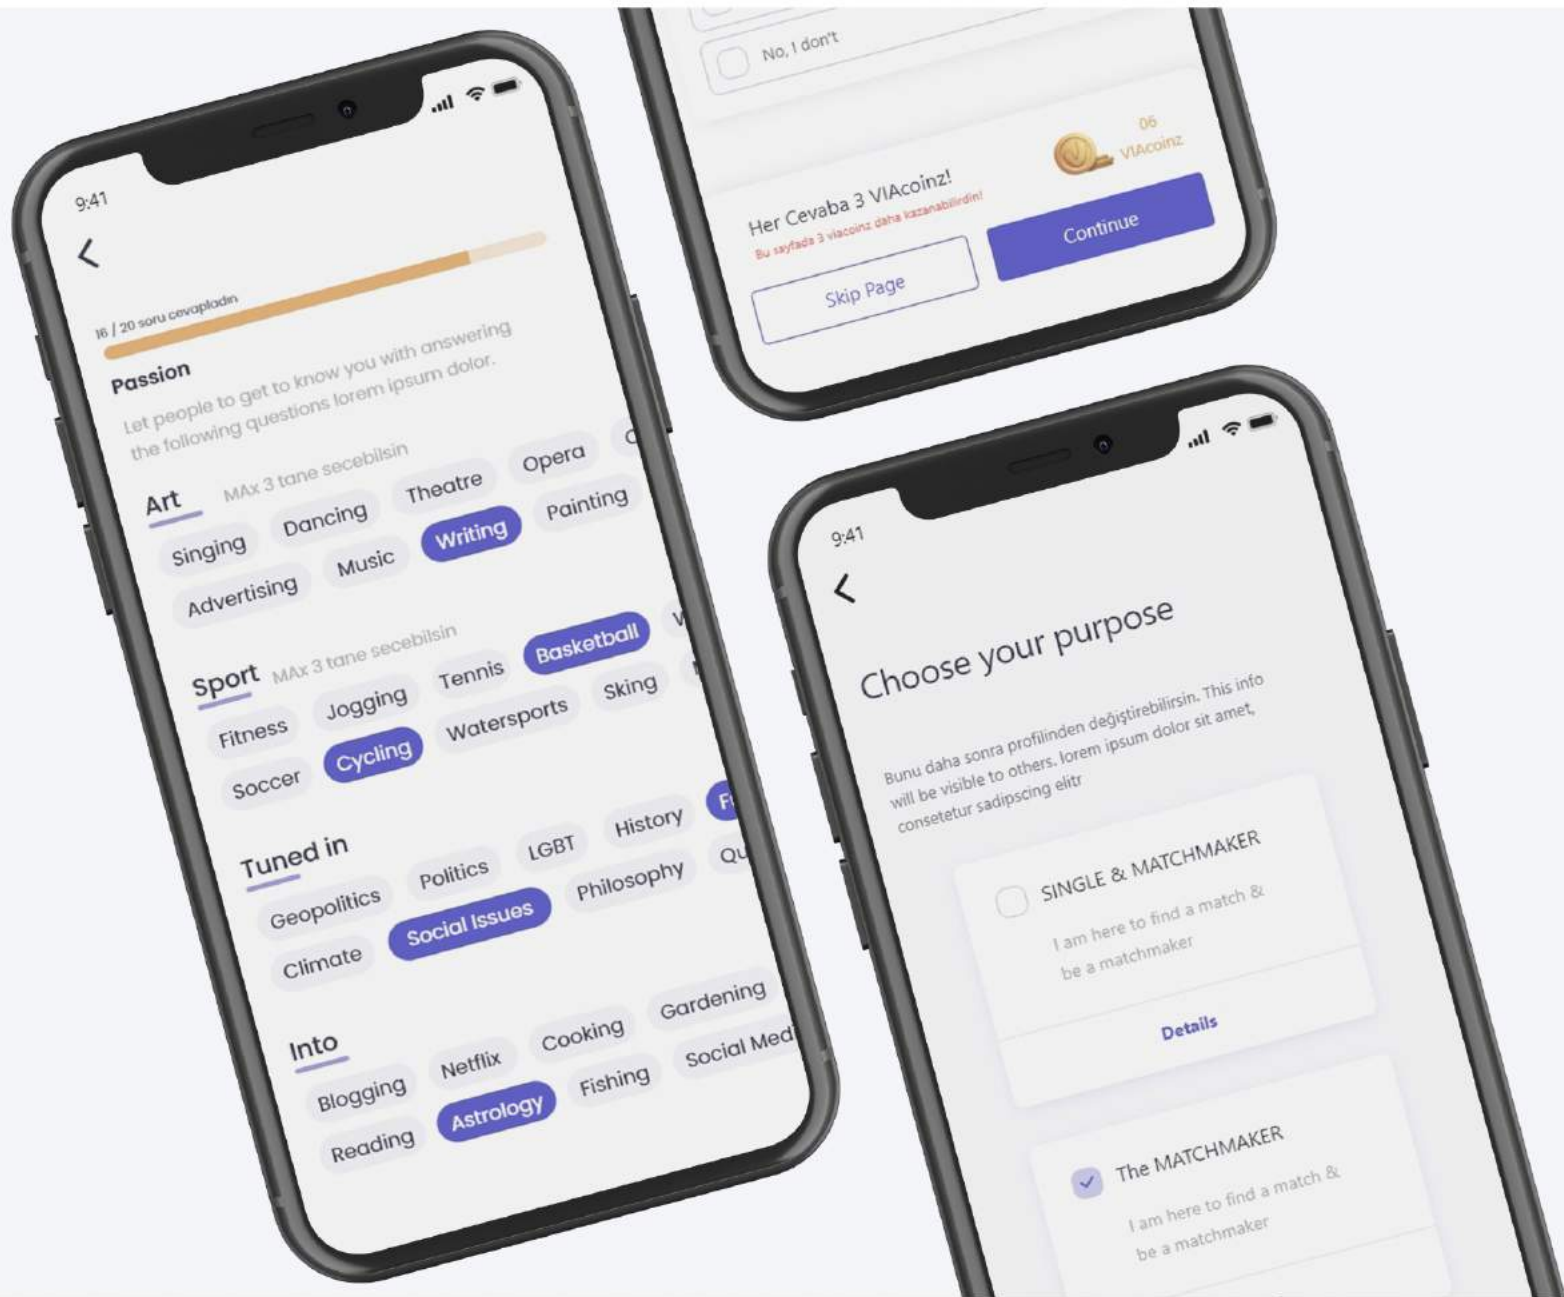

## Viafrenz Mobile Application Design

The VIAFRENZ application is a dating application where matches are made through mutual friends.

We started the design process by researching the target audience of the product with netrographic studies. After determining our needs and strategy, we have transformed wireframes into visual designs by following the branding and corporate identity designs we have created.

Interface Design

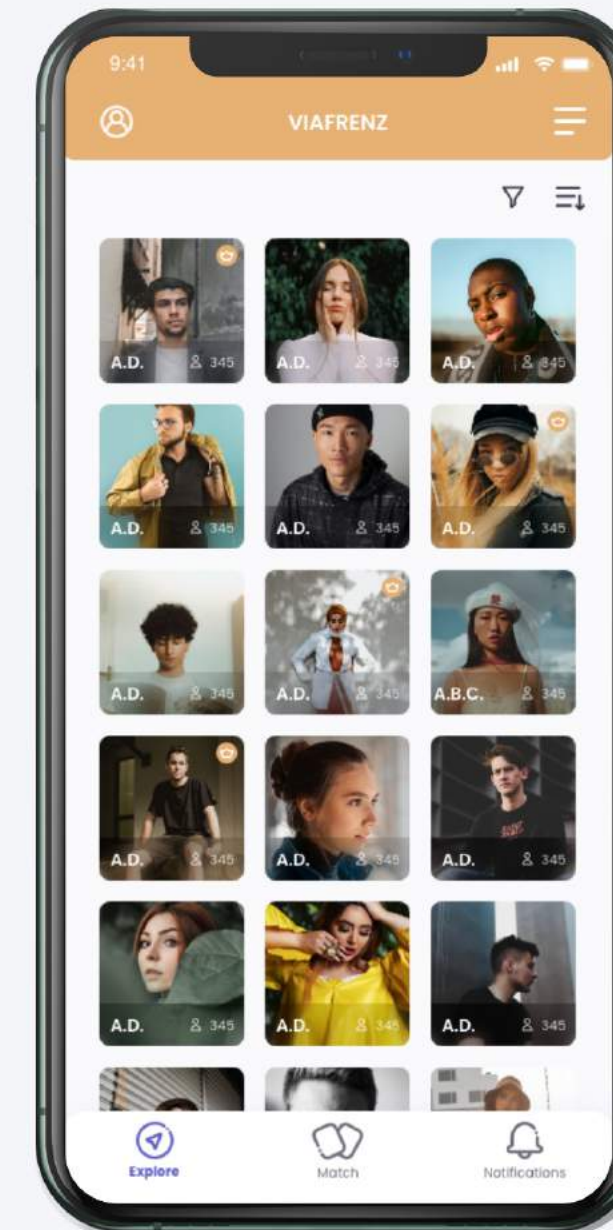

Information Architecture

Wireframe

# Viafrenz

## Networks

In this application, instead of suggesting people who do not have a common point to the user just because they live in the same area, Viafrenz use special algorithm and make suggestions that may be appropriate from the pool of friends' friends.

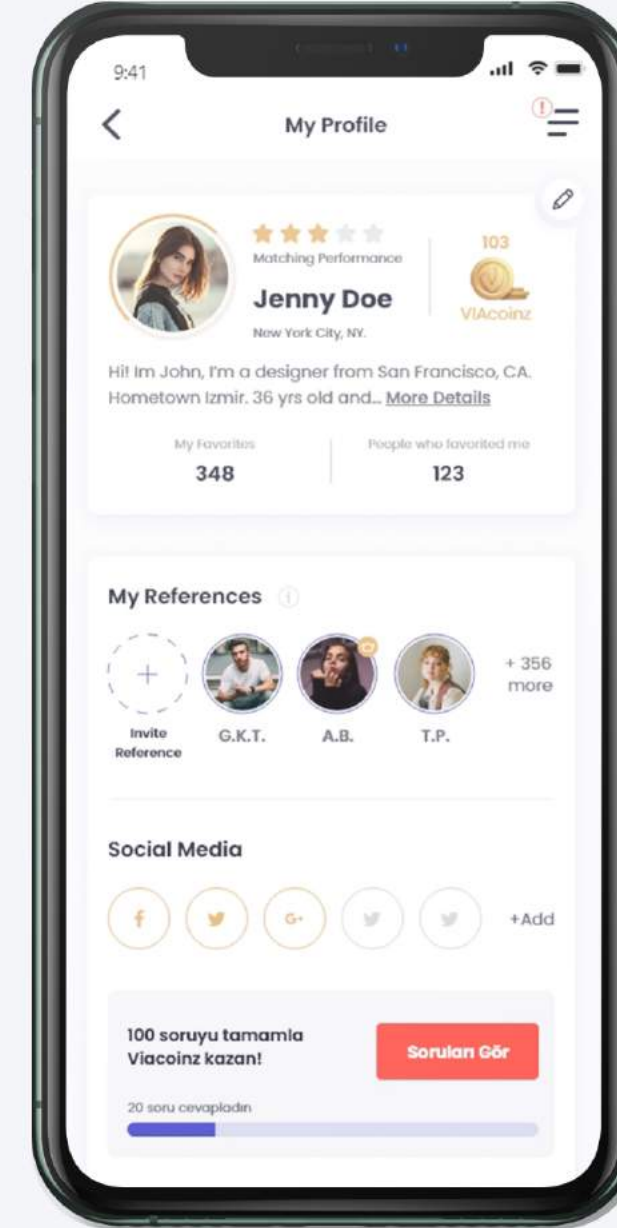

# Viafrenz

## Profile

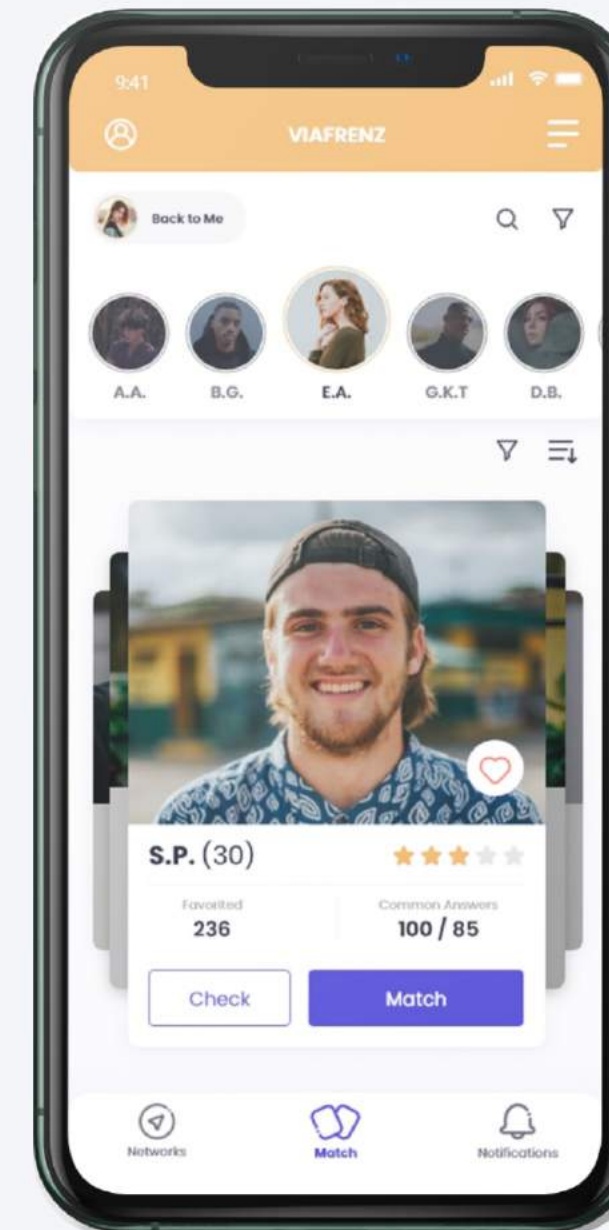

The user invites friends to the application that they know and can refer to. When each user brings their own friend, the pool of friends grows large enough to accommodate like-minded people.

# Viafrenz

## Matching

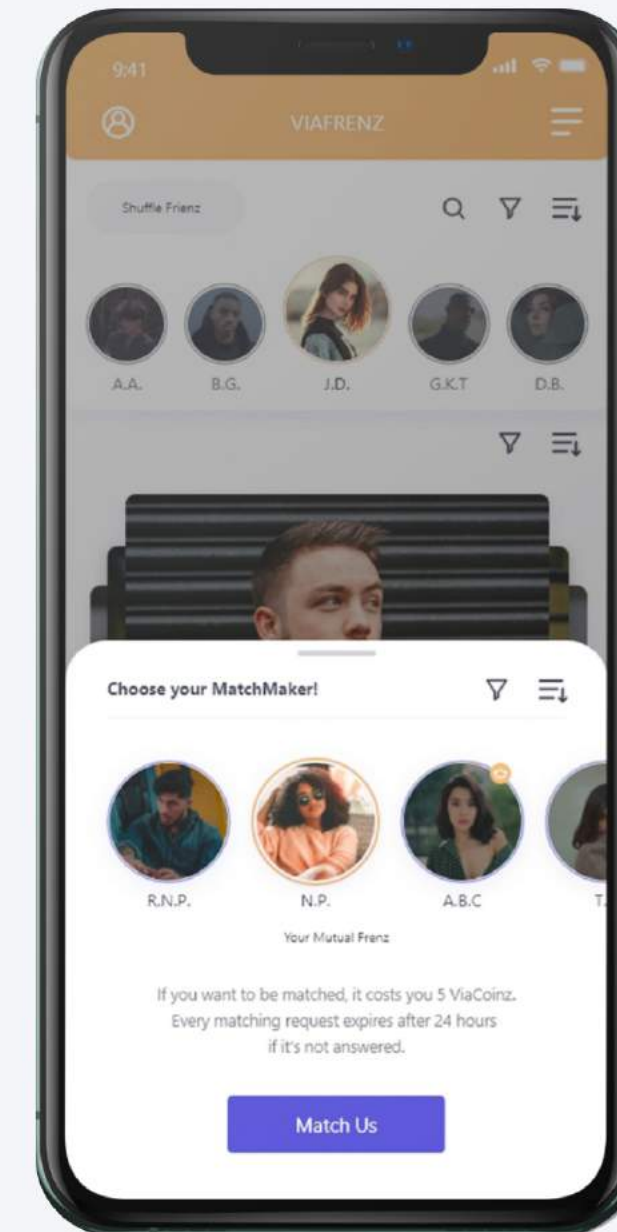

The user can view the people suitable for him or his friends in the reference list according to his profile compliance algorithm. S/he can check the compatibility level, the answers to the questions, and add his/her to favorites or send a matching request.

# Viafrenz

## Match Request

When a user wants to match someone, they say "I saw a friend of my friend, I liked it very much." After this point, he chooses his mutual friend to be a reference and transmits his request. When both parties approve, a match becomes completed.

VIAFRENZ mobile app is in testing phase!  
Will be in app stores very soon.

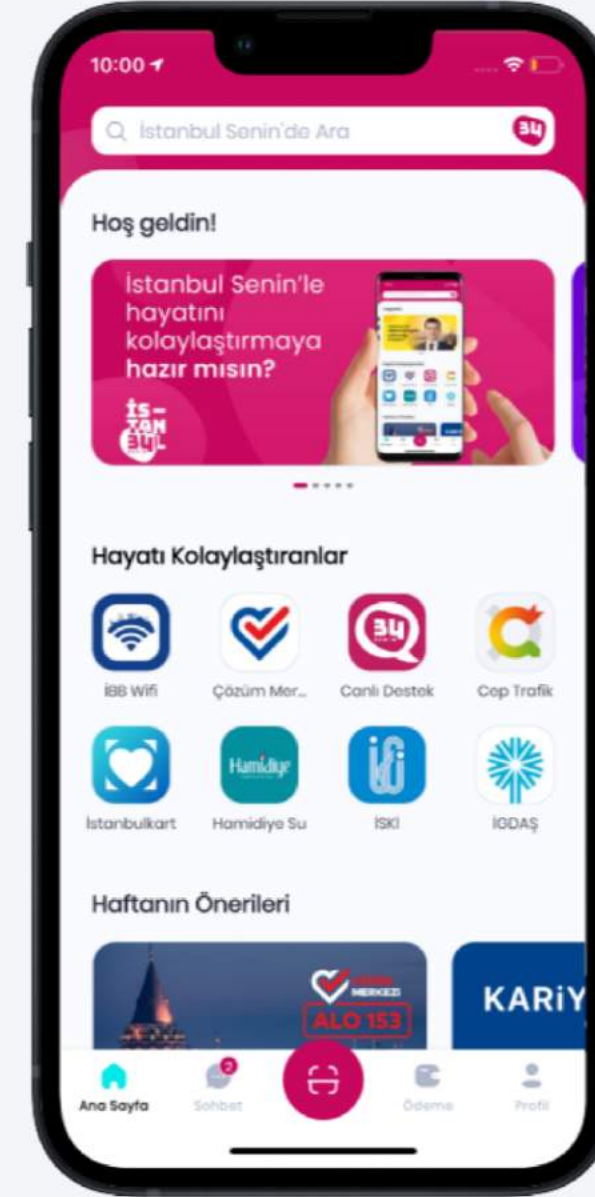

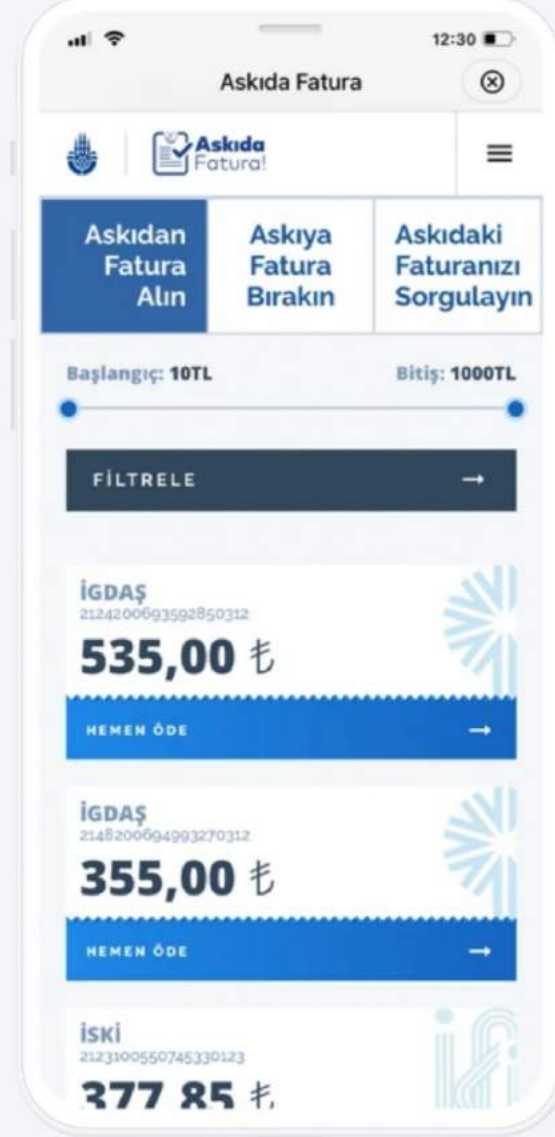

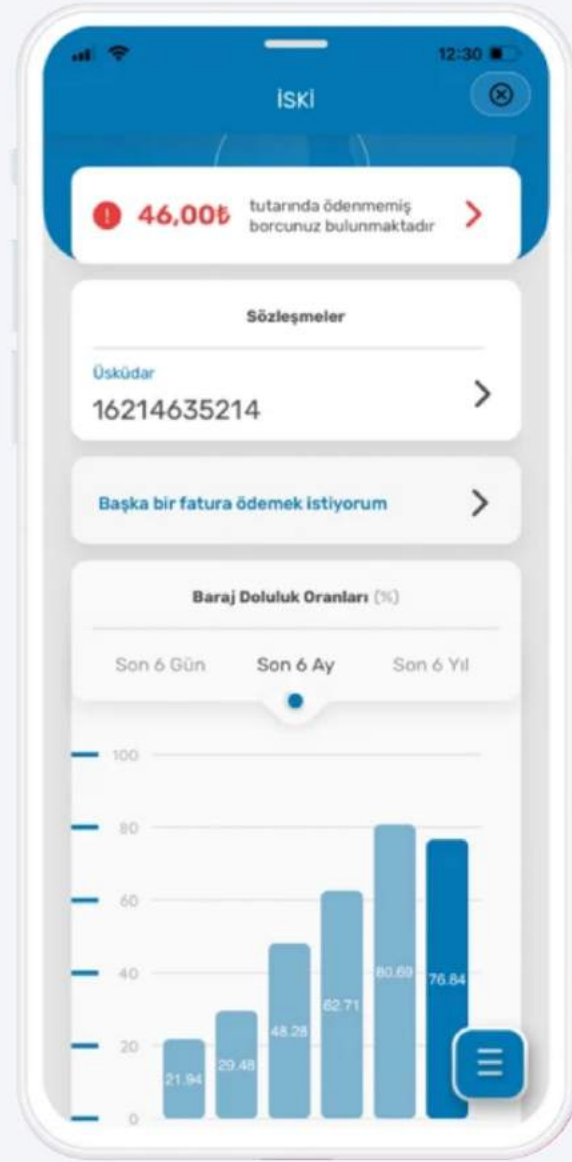

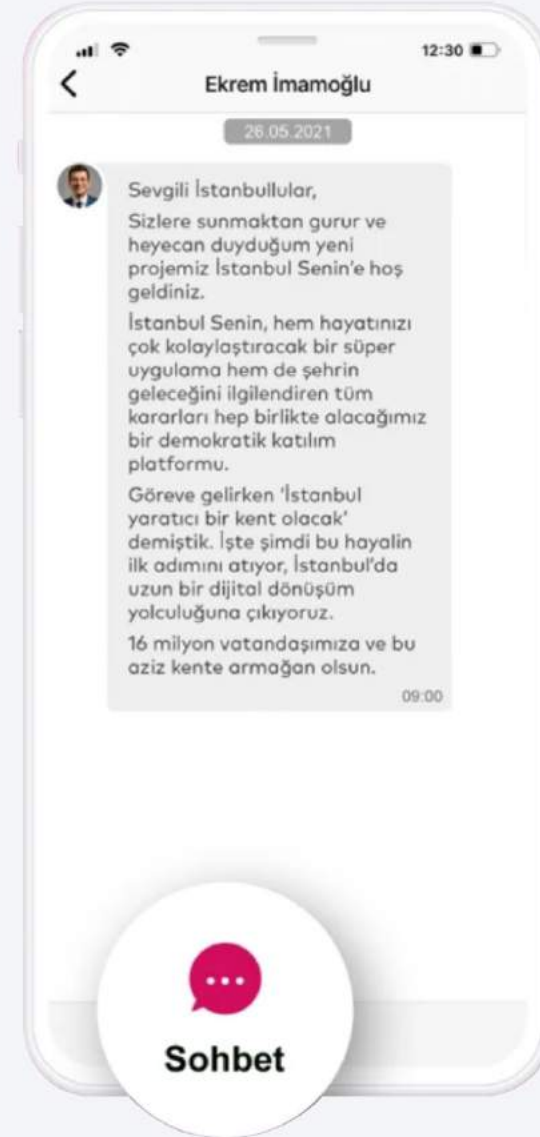

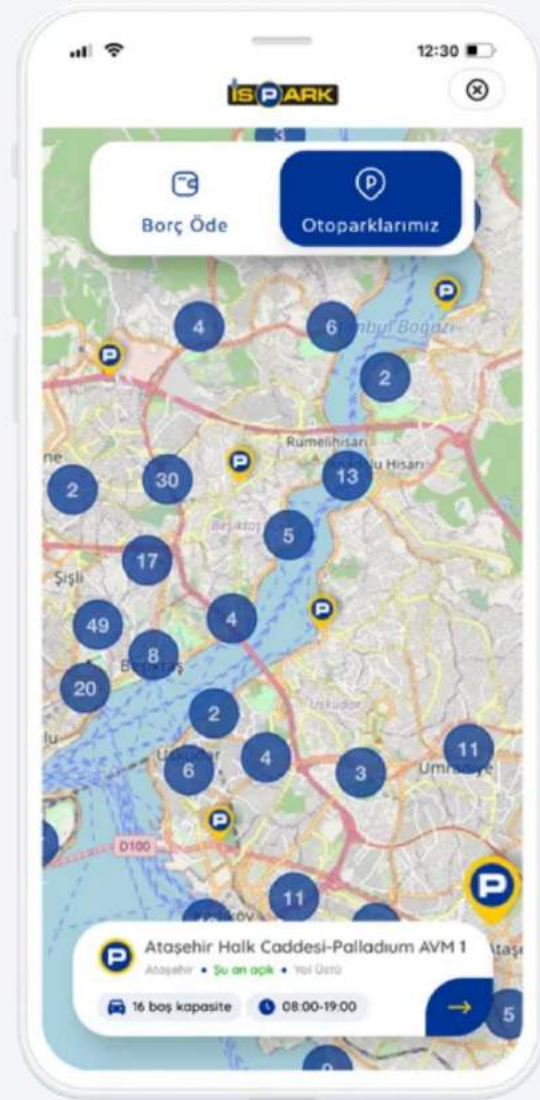

## İstanbul Senin Mobile Application

We developed mini-apps that are integrated into the mPower ecosystem. Those apps contain mPay, mChat, and mIdentity functionalities of the mPower product. In addition, we developed the mPower admin panel dashboard.

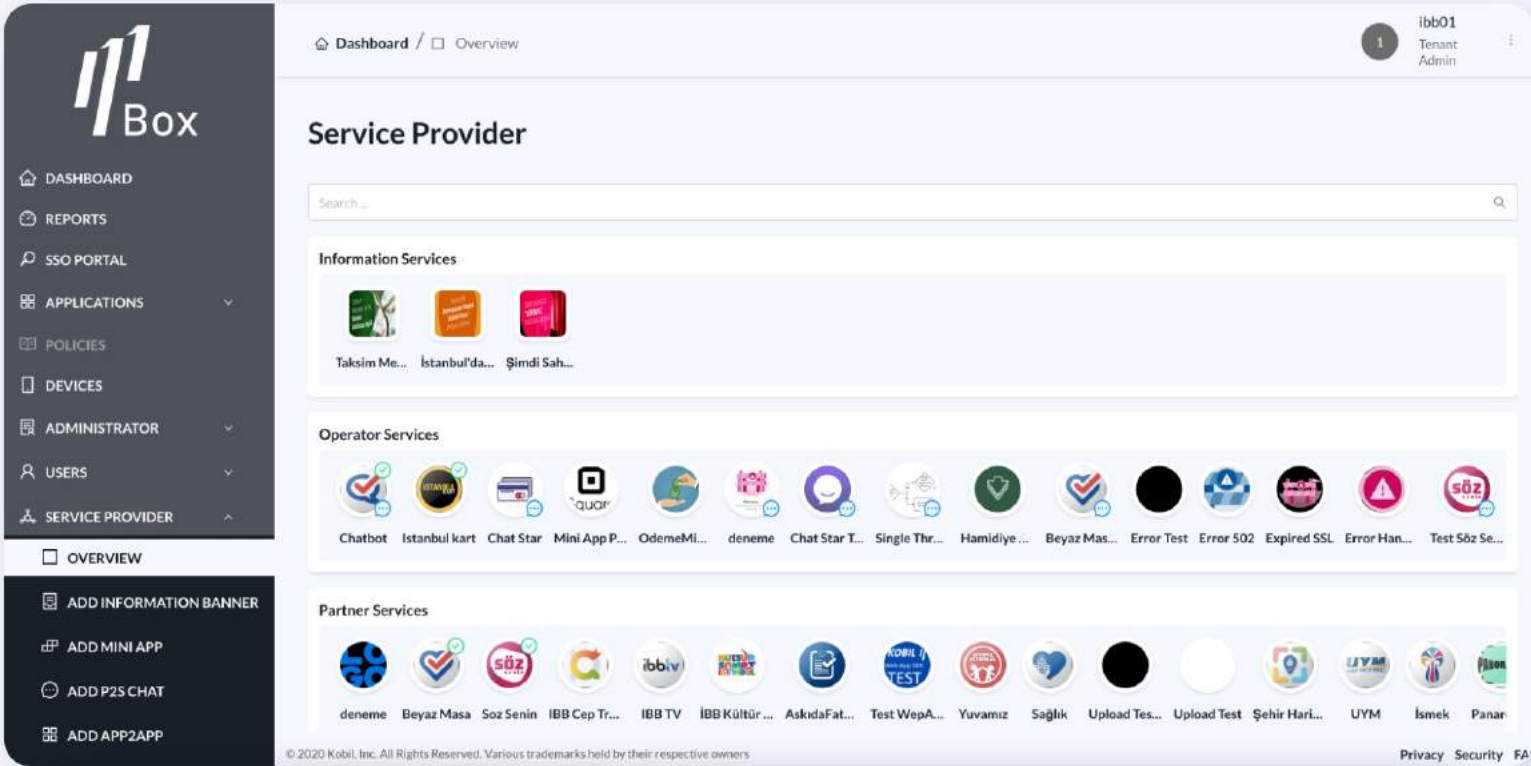

# Istanbul Senin

## Super Admin Management

mPower dashboard contains functionalities to manage users, devices, service providers, applications, and tenant configuration.

## Kobil – mIdentity.box Web Development

mIdentity.box is an application based on trusted identities and trusted communication. A place where today meets tomorrow, packed in mIdentity.box. You can communicate & sign in a secure ultimate app.

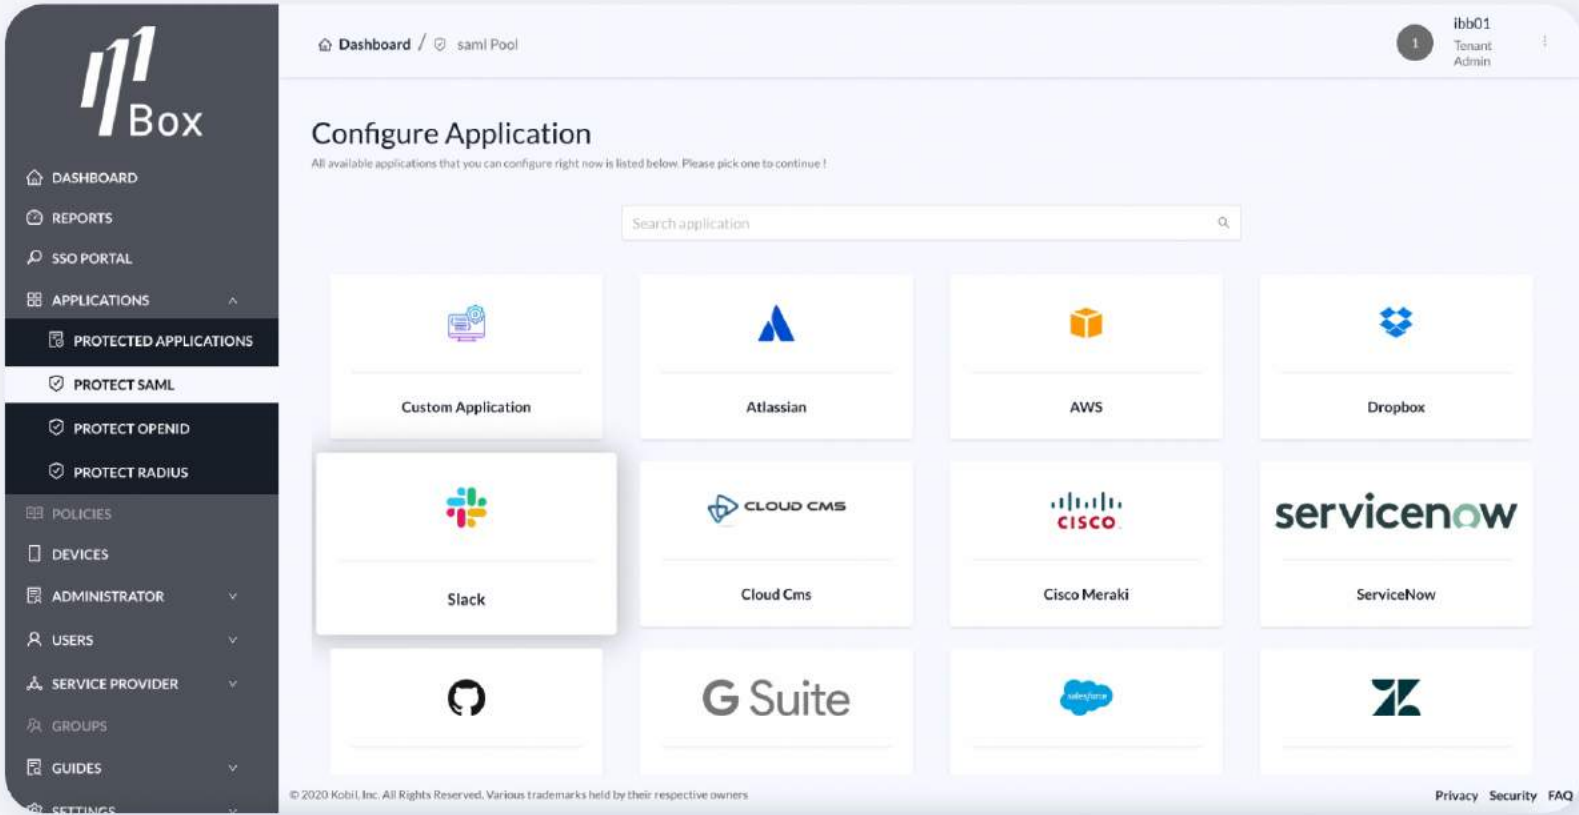

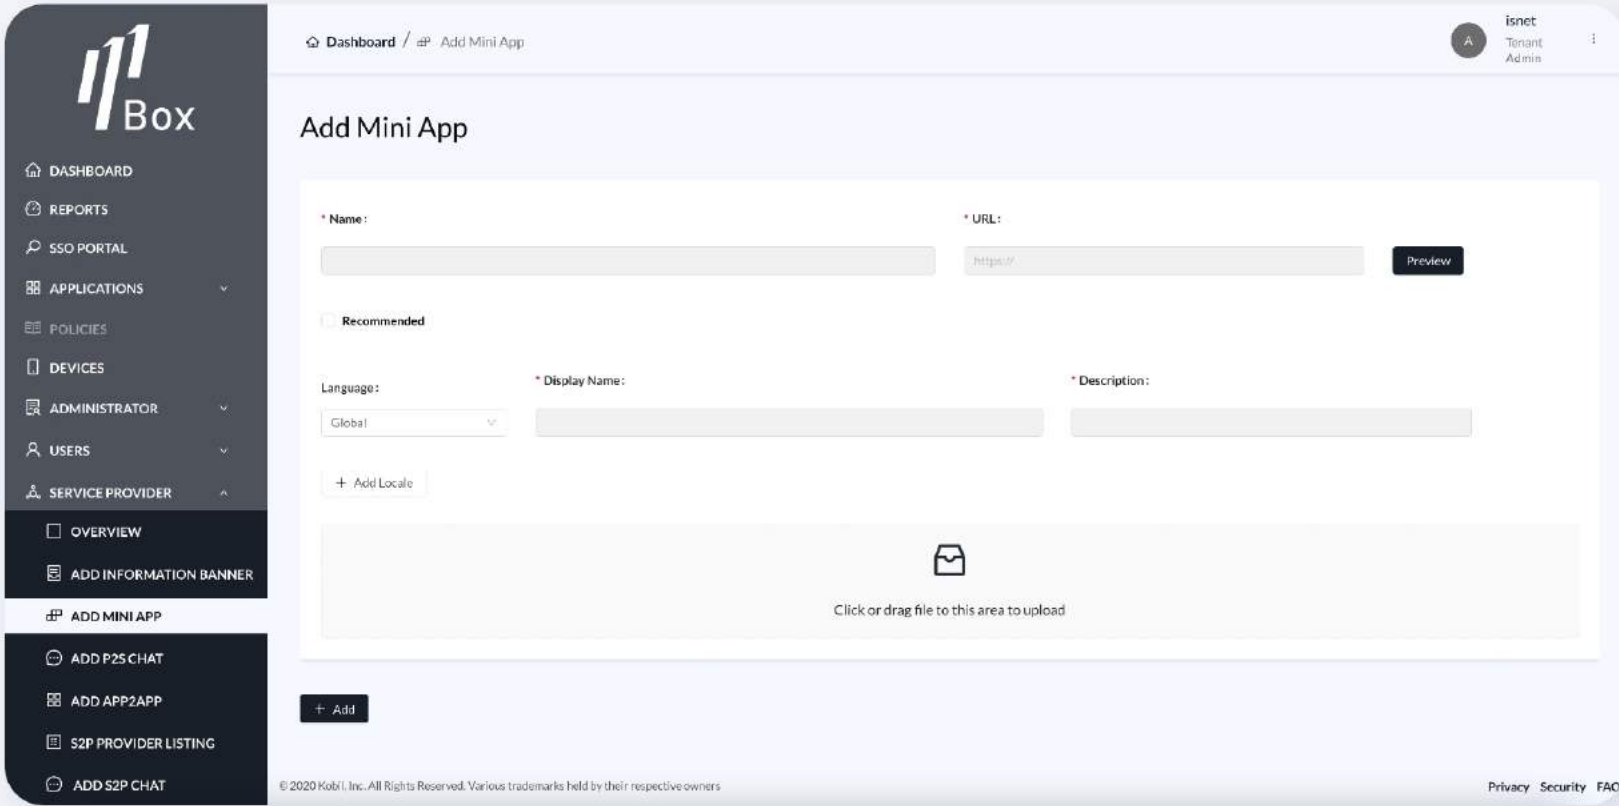

# Kobil – mIdentity.box

We created the dashboard for mIdentity.box application.  
We integrated 2-Factor-Authentication.

# What Have We Done?

## Türknet / Devops

We provide DevOps consultancy for Turknet, one of Turkey's leading internet providers. We support the creation and migration of Docker and Kubernetes architecture.

Deployment Automation

Grafana

JIRA Integration

Nginx & IIS

New Relic

Log Management - ELK Stack

Zabbix

Configuration Management

Promethues

Containerization – Docker & Kubernetes

**AKBANK**

## Akbank – Dynatrace Consultancy

We Support the critical operations of Akbank, one of Turkey's leading banks, with Dynatrace.

Our expert team provides consultancy to Akbank and its team in Dynatrace processes.

We integrate the events captured from Dynatrace into JIRA and send notifications to the Operations Team. We ensure that Dynatrace and the servers on which Dynatrace is installed work properly and provide support.

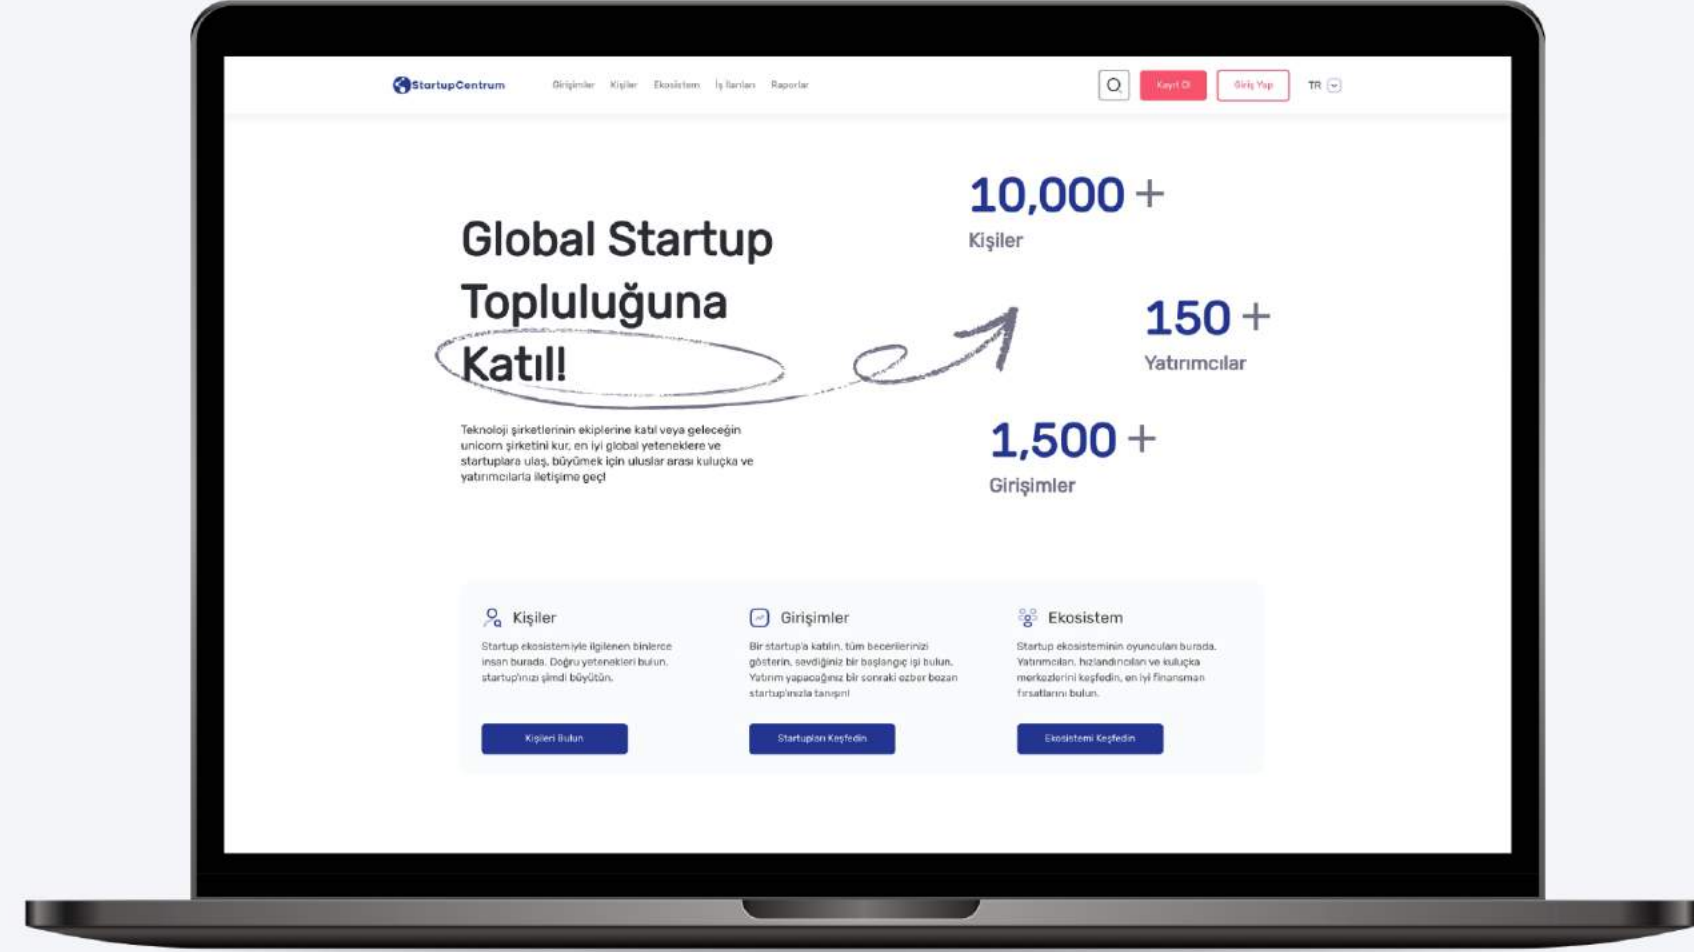

# StartupCentrum

## Web Design

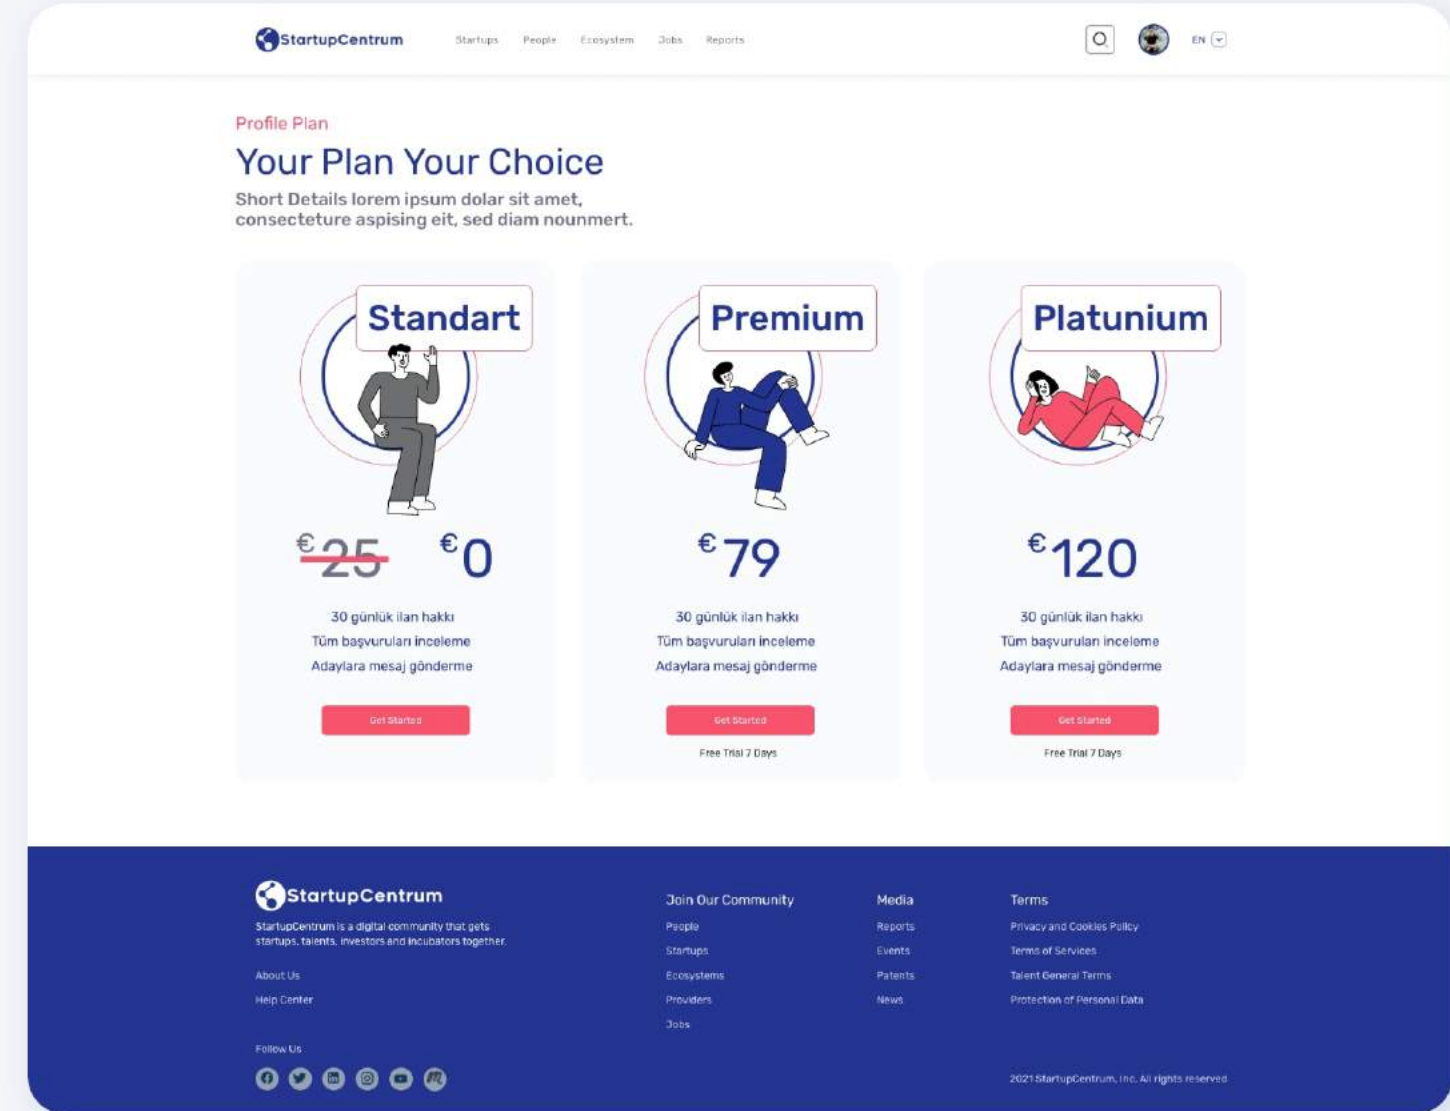

Startupcentrum is a digital platform that brings together startups, investors, incubators and talents related to the entrepreneurial ecosystem.

# StartupCentrum

We worked with Startup Centrum on UI/UX design. Our design team made detailed researches and improvements in line with our customer's instructions and revealed the design of the Startup Centrum as desired.

# StartupCentrum

We created 5 different profile options for users , these are:

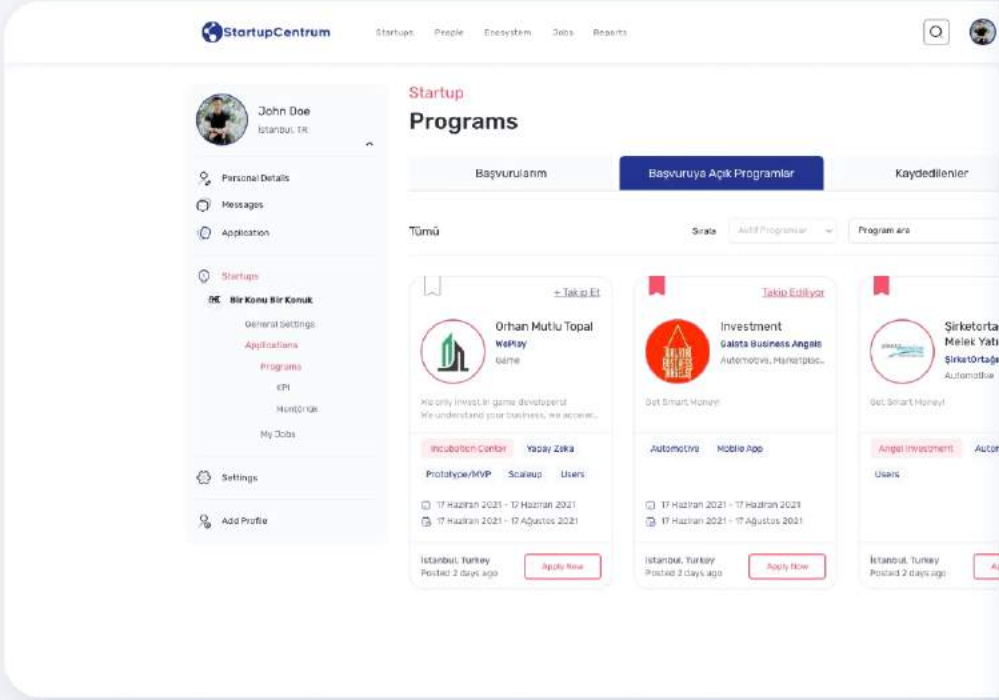

- Startup
- People
- Headhunter
- Angel Investor
- Provider

The screenshot shows the 'Sign Up' page of StartupCentrum. The page has a clean, modern design with a white background. At the top, there is a navigation bar with the StartupCentrum logo and links for Startups, People, Ecosystem, Jobs, and Reports. On the right side of the navigation bar, there are links for Sign Up and Login, and a language selector set to EN.

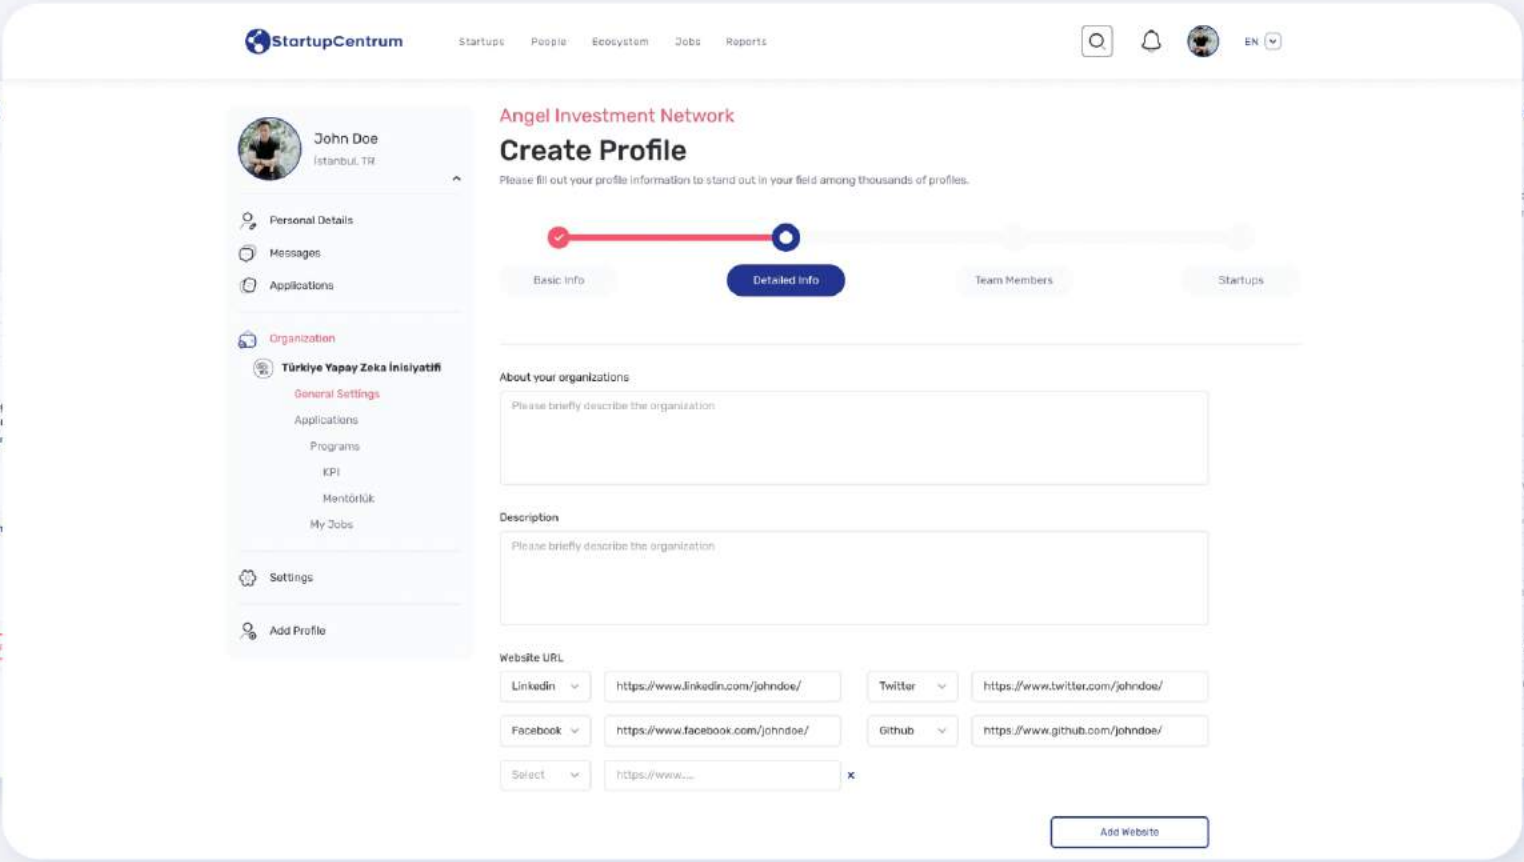

The main content area is divided into two sections. On the left, there is a 'Sign Up' form with the following fields: Name (with a sub-field for Surname), Email, Password, and Password Again. Below the password fields, there are two checkboxes: 'I agree to StartupCentrum's Terms of Services and Privacy Policy' and 'I'm not a robot' (with a CAPTCHA image). A red 'Sign Up' button is positioned below the form. Below the button, there are social media icons for Facebook, Google+, LinkedIn, and GitHub. At the bottom of the form section, there is a link for 'Already have an account? Login'.

On the right side of the main content area, there is a motivational message: 'Dream big, set goals, take action. Let's join our global startup community!'. Below the text is a large circular graphic showing two hands shaking, with two stylized figures (one red, one blue) jumping or running towards the center of the circle.

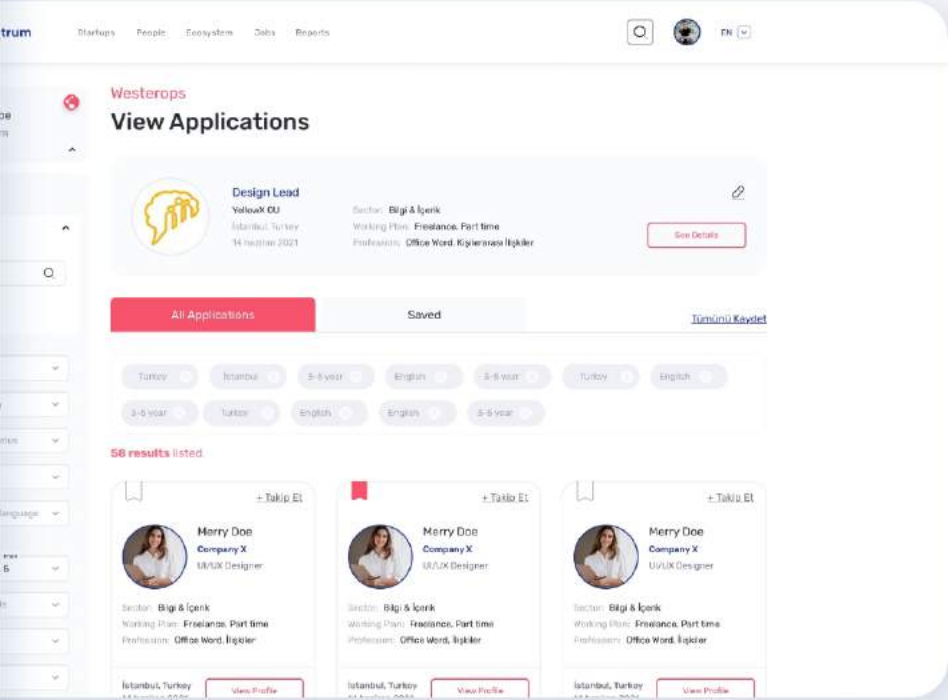

Startup

People

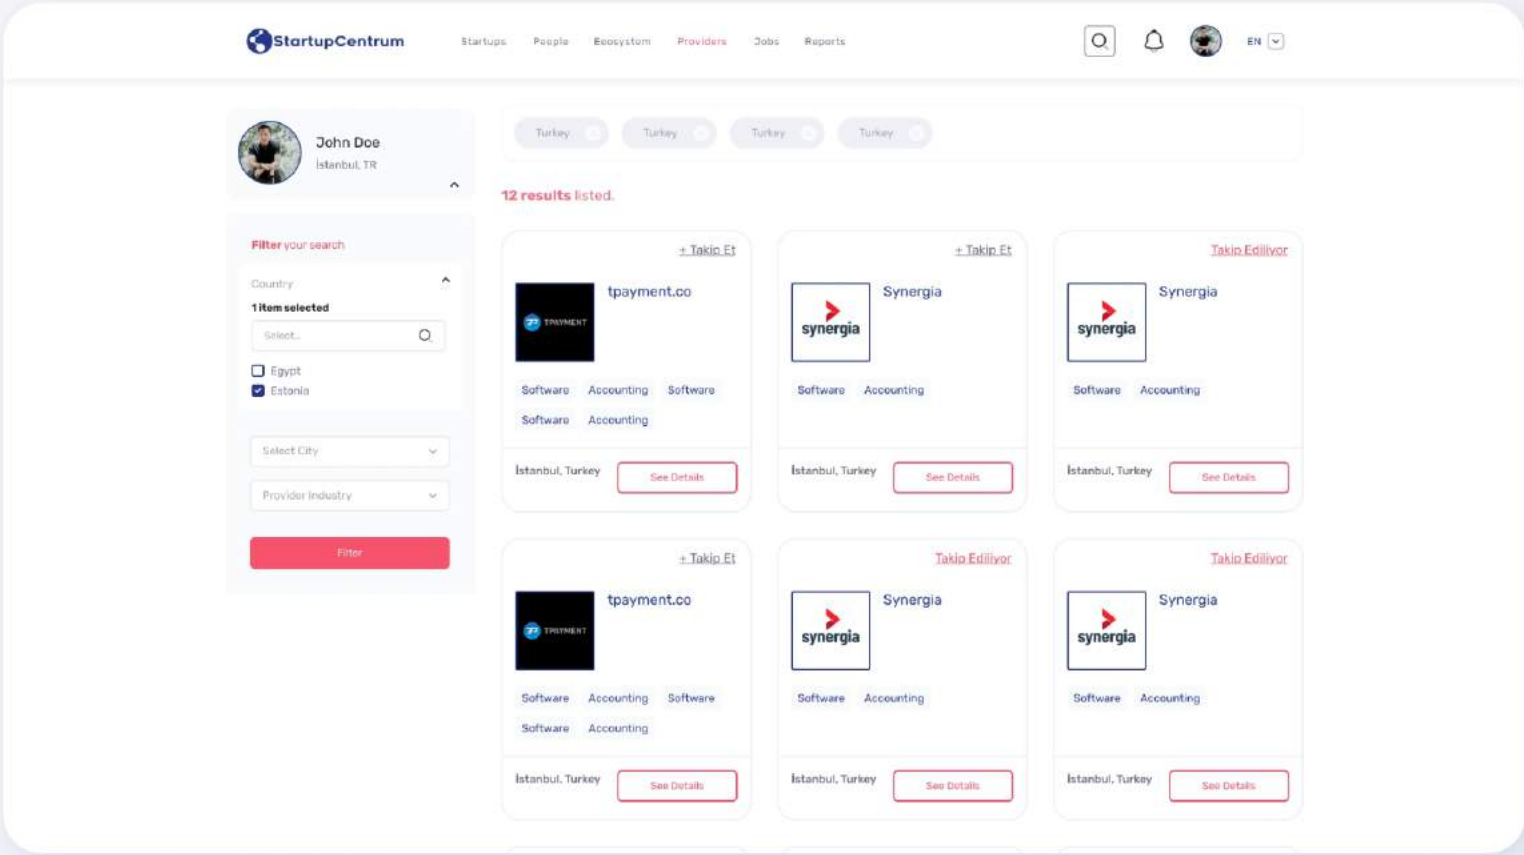

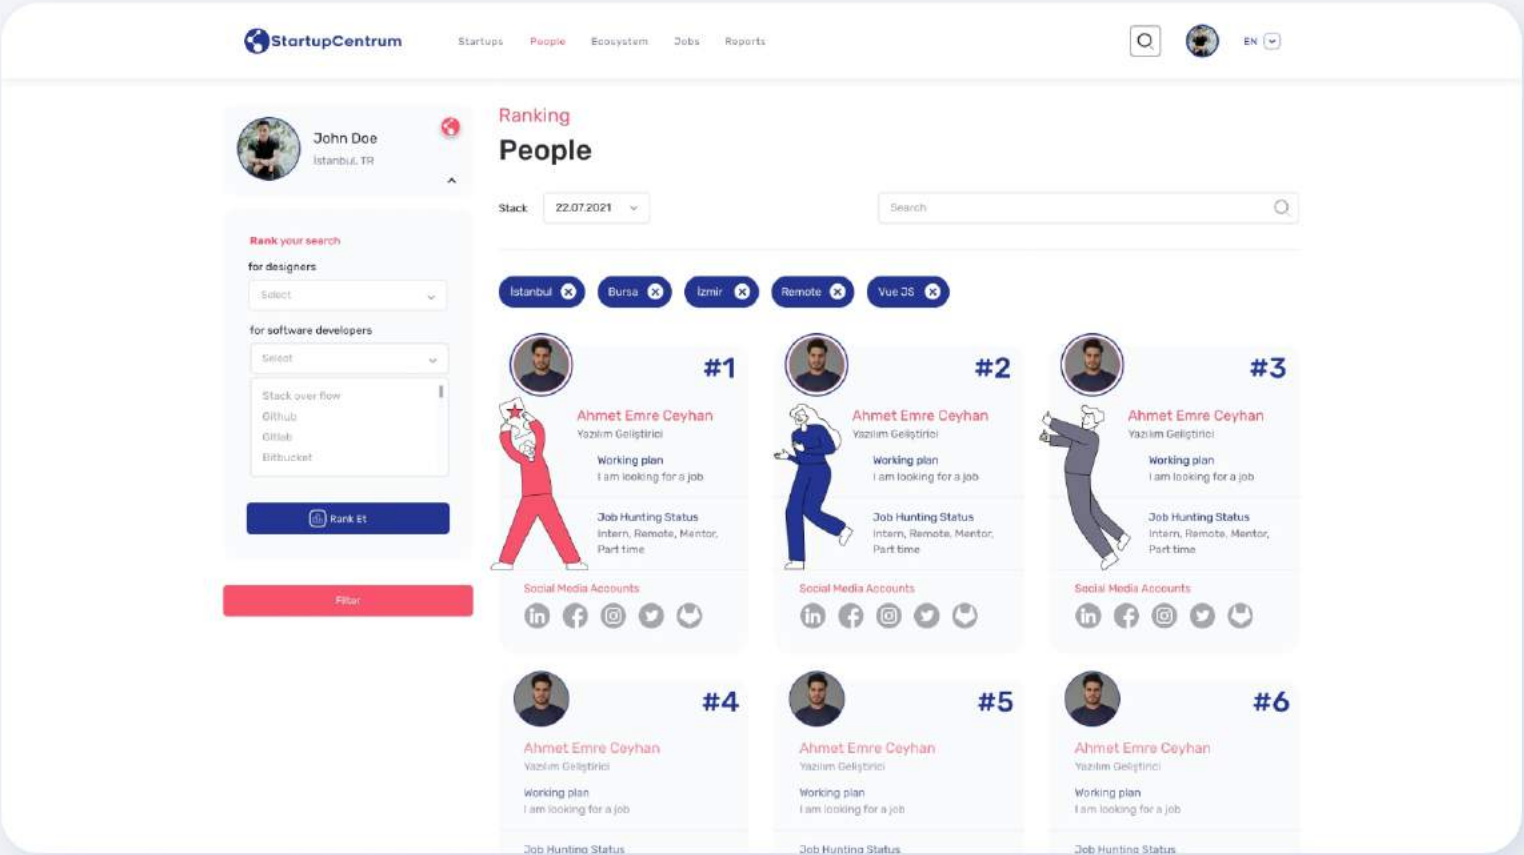

Headhunter

Angel Investor

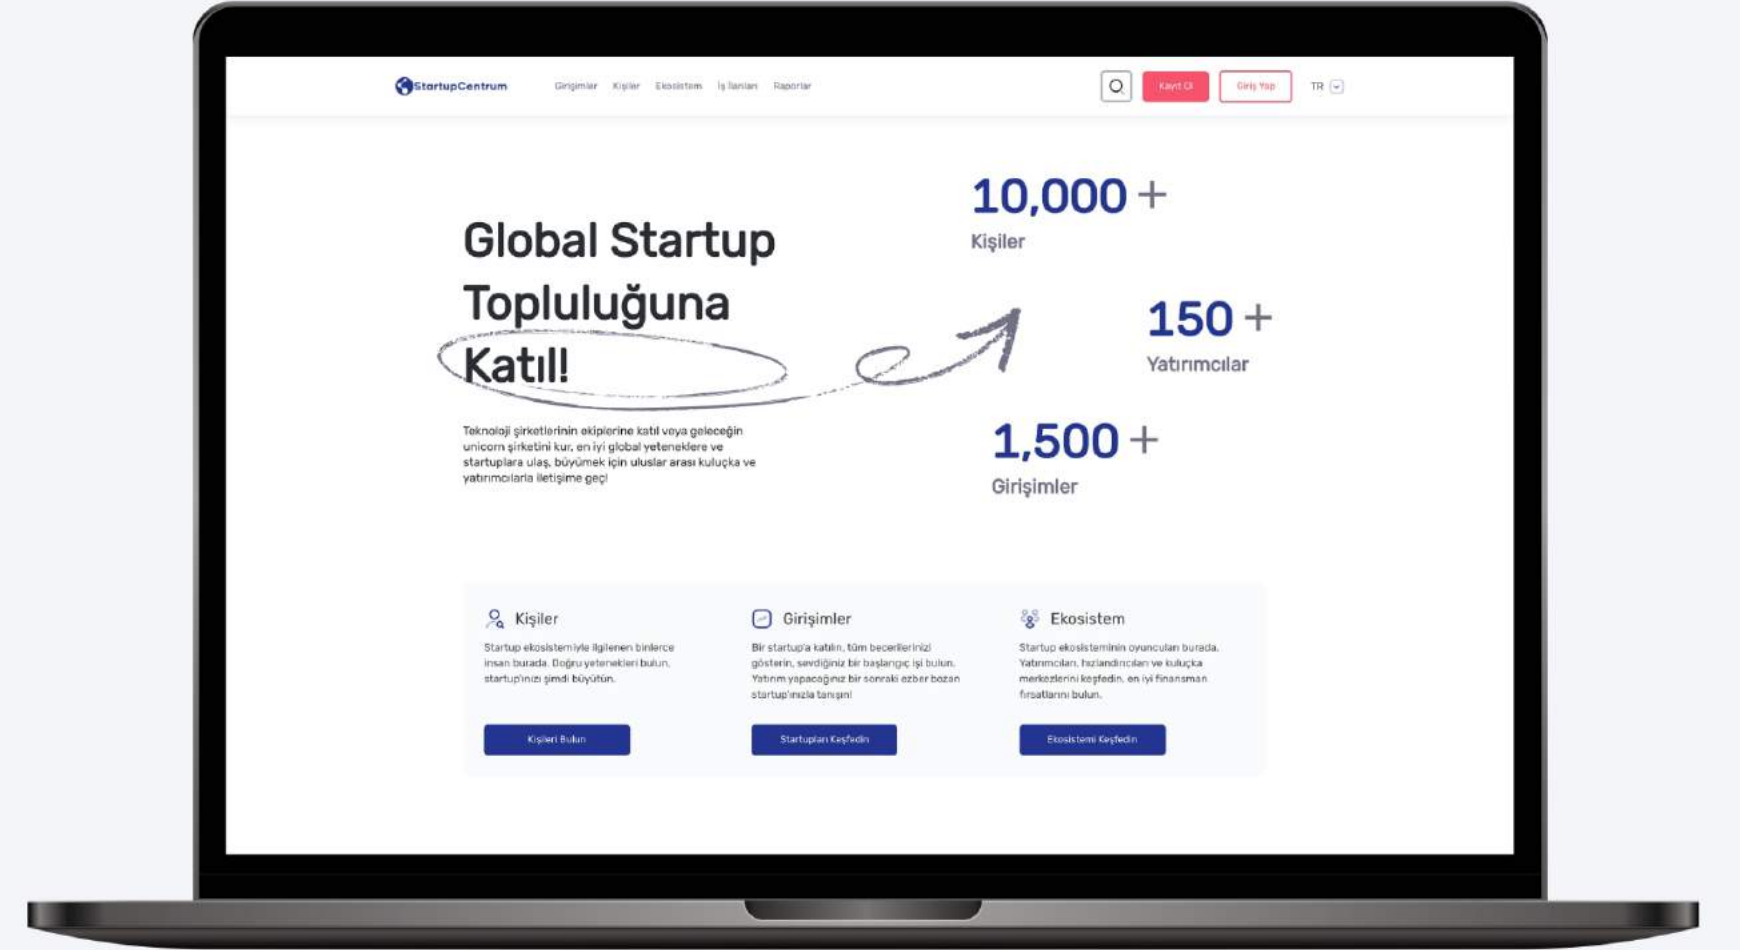

Provider

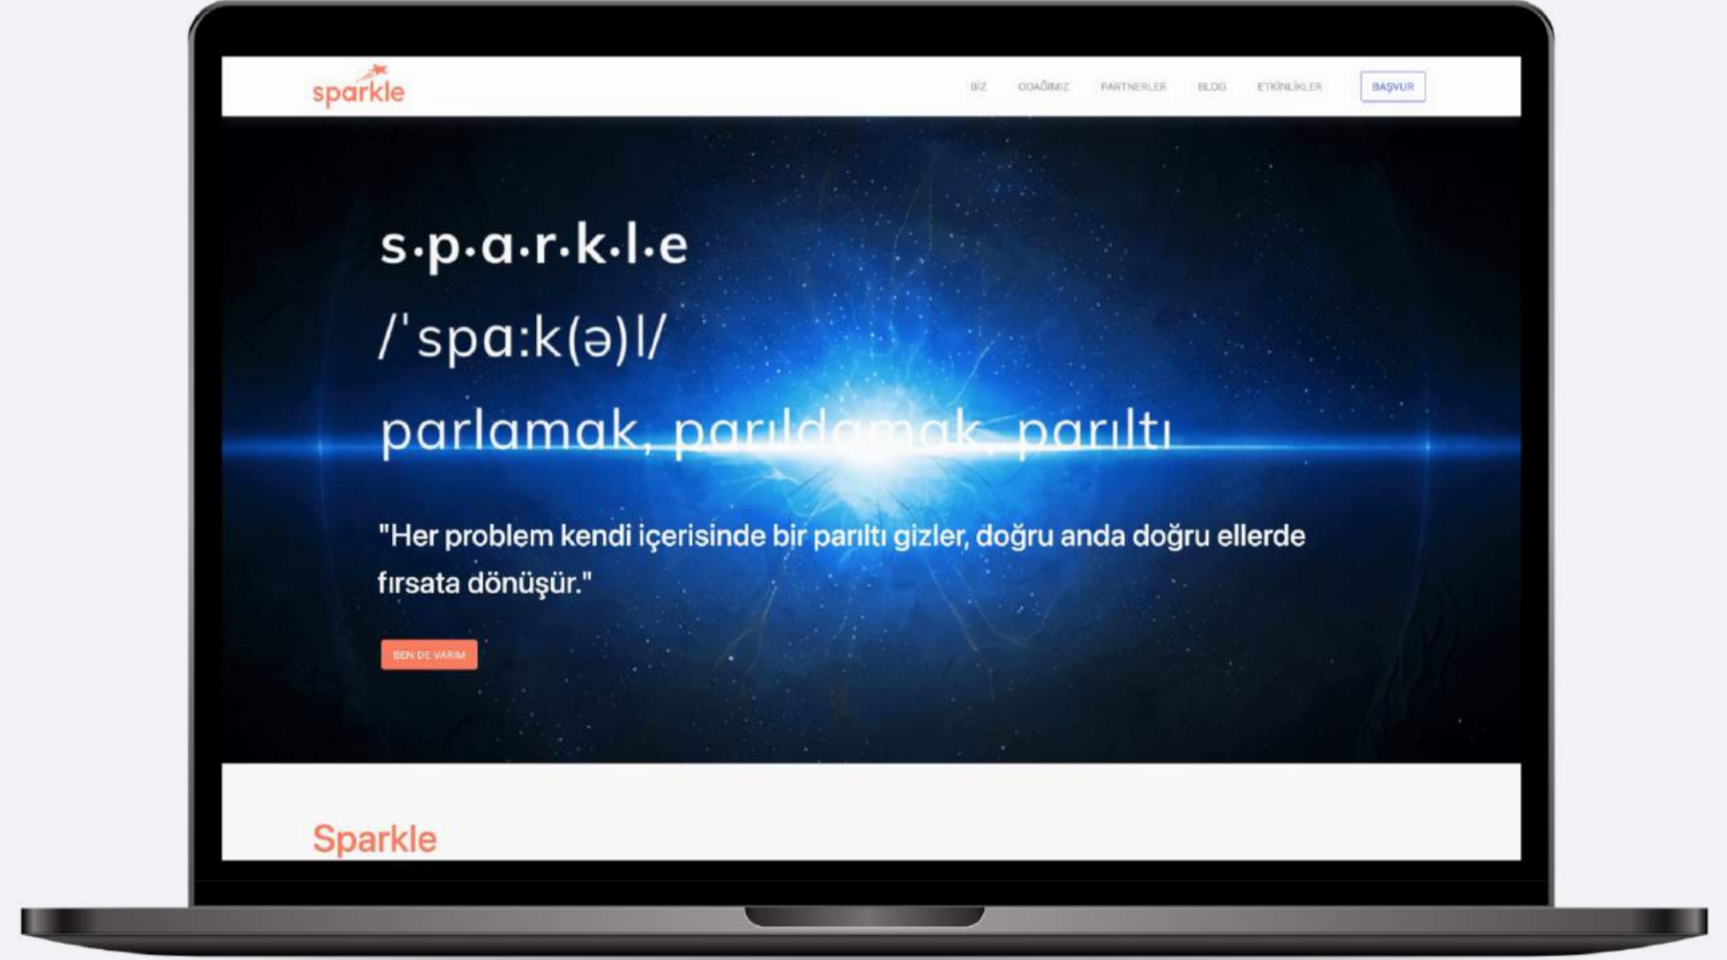

You can be a part of the Startup Ecosystem. STARTUPCENTRUM is available on [startupcentrum.com/tr](https://startupcentrum.com/tr)

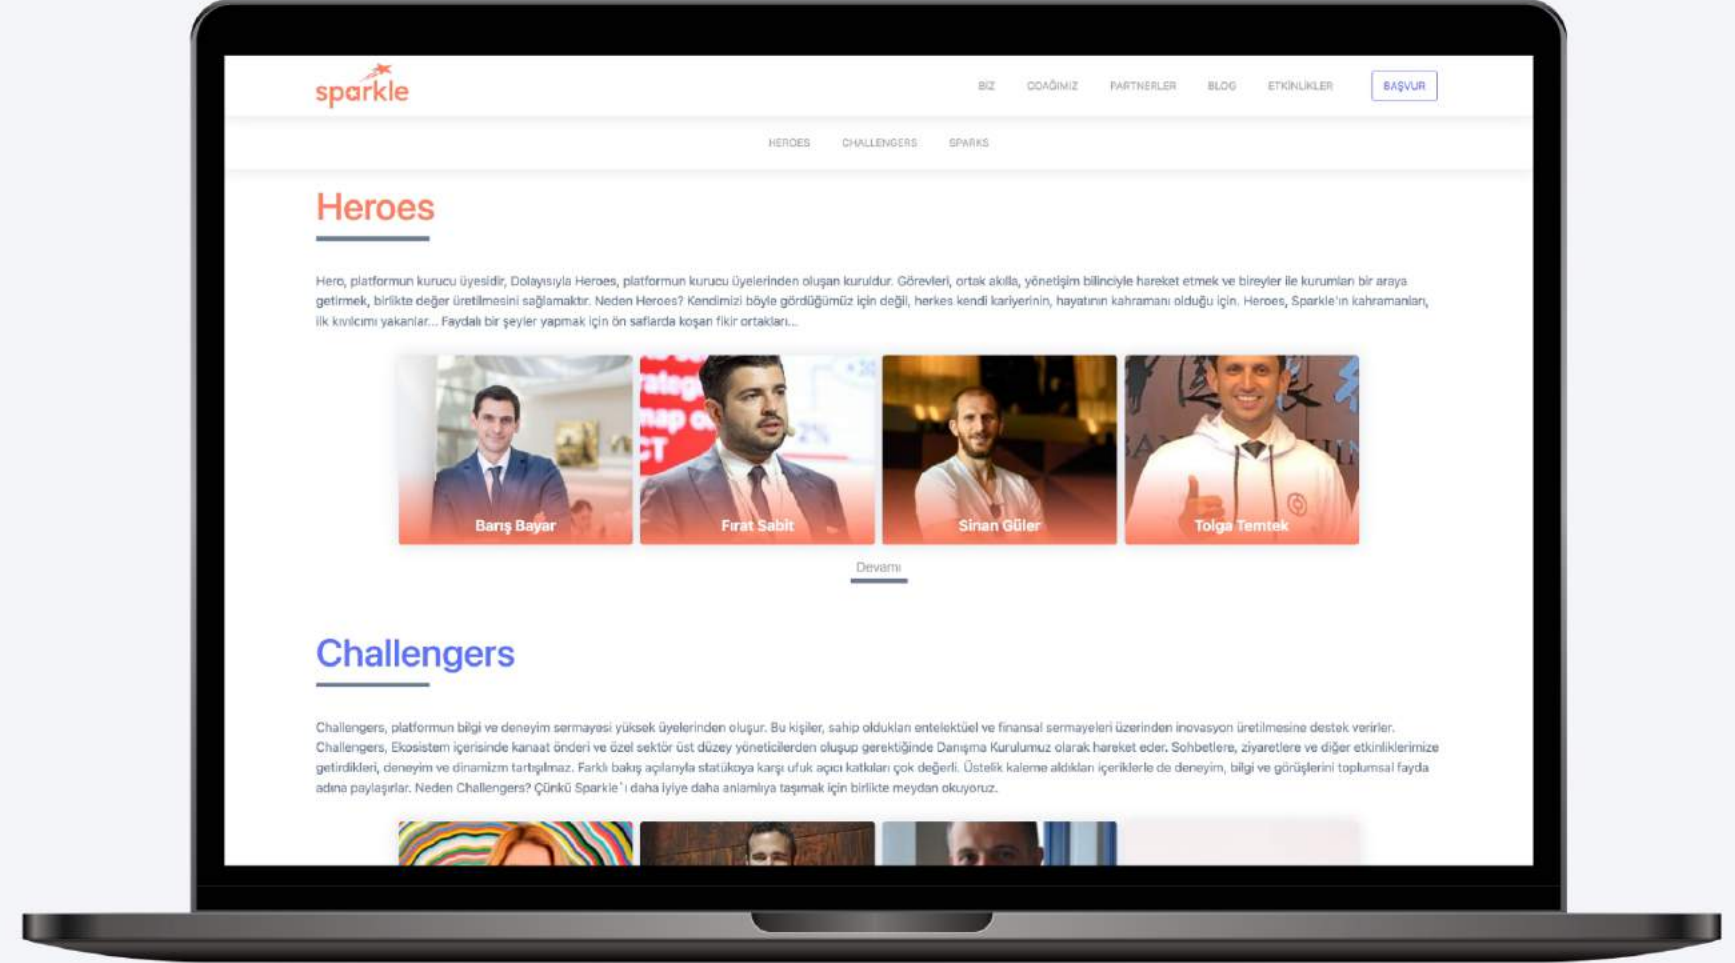

## Sparkle Web Design

Sparkle is a new generation community that acts as a bridge between the entrepreneurship and innovation ecosystem and institutions, based on volunteerism, and where all stakeholders feed by influencing each other.

# Sparkle

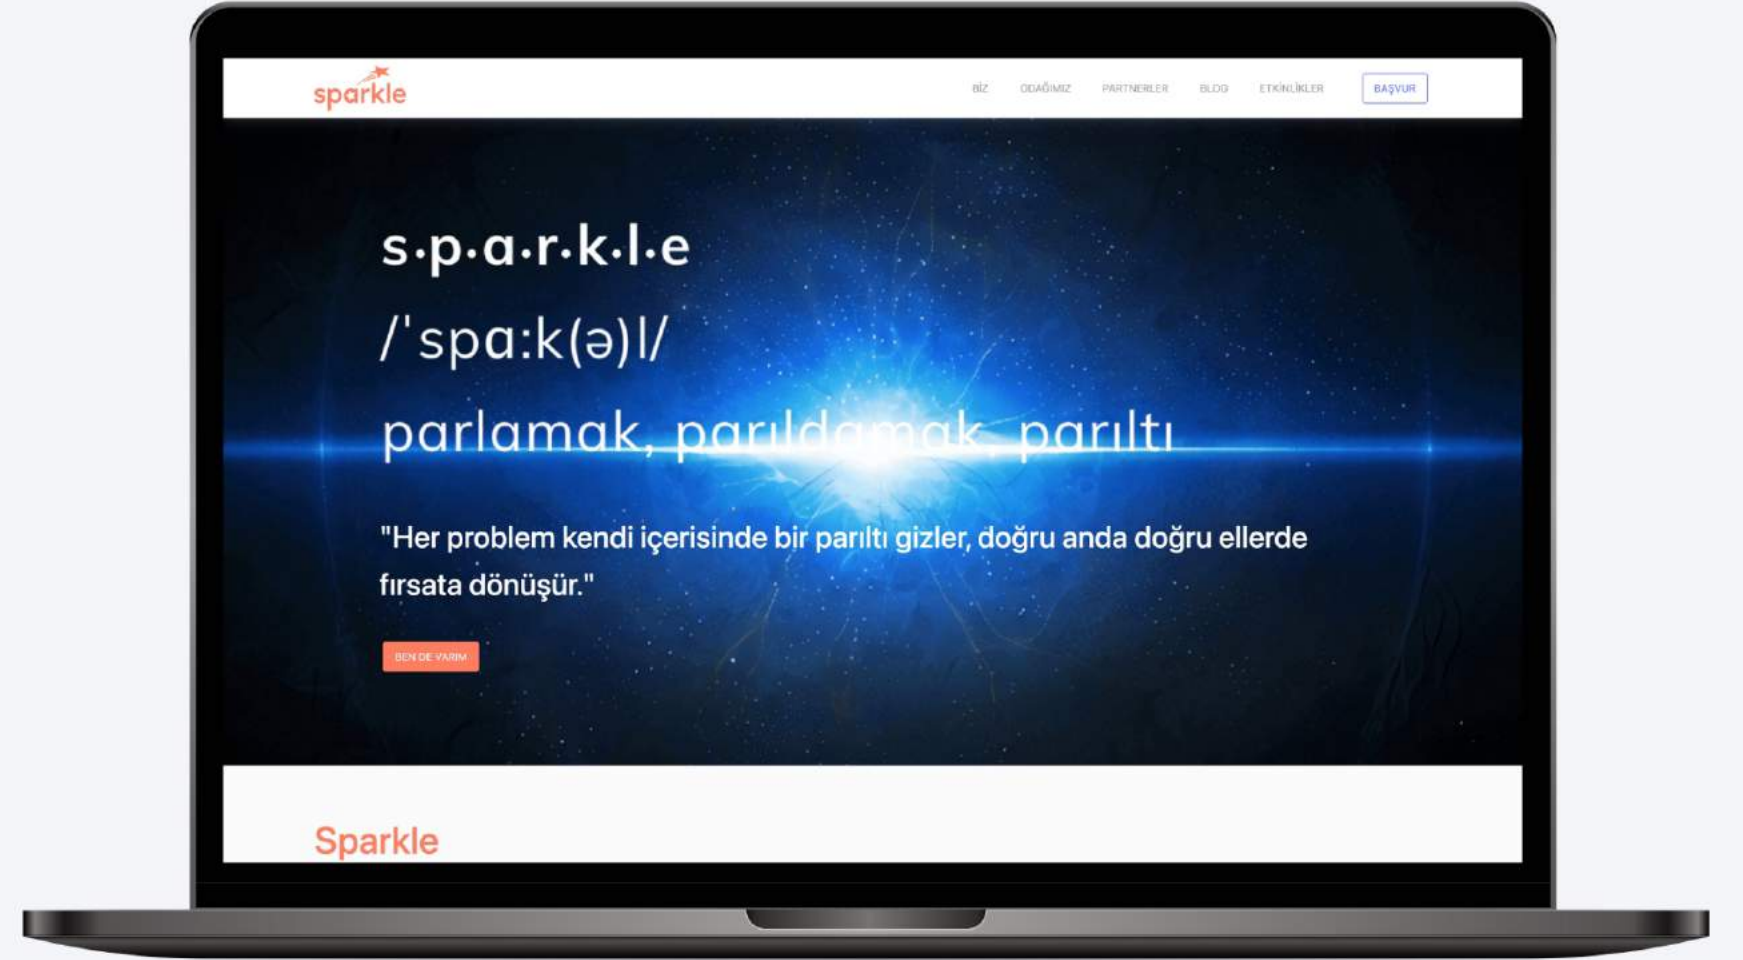

We worked with Sparkle on website design and development. We have done a study to understand our customer's point of view and meet their expectations. As a result of our UX research and wireframing, we implemented a simple and elegant user interface design.

SPARKLE is available on sparkle.zone  
Visit the website and bring out  
your passion for Entrepreneurship  
and Innovation!

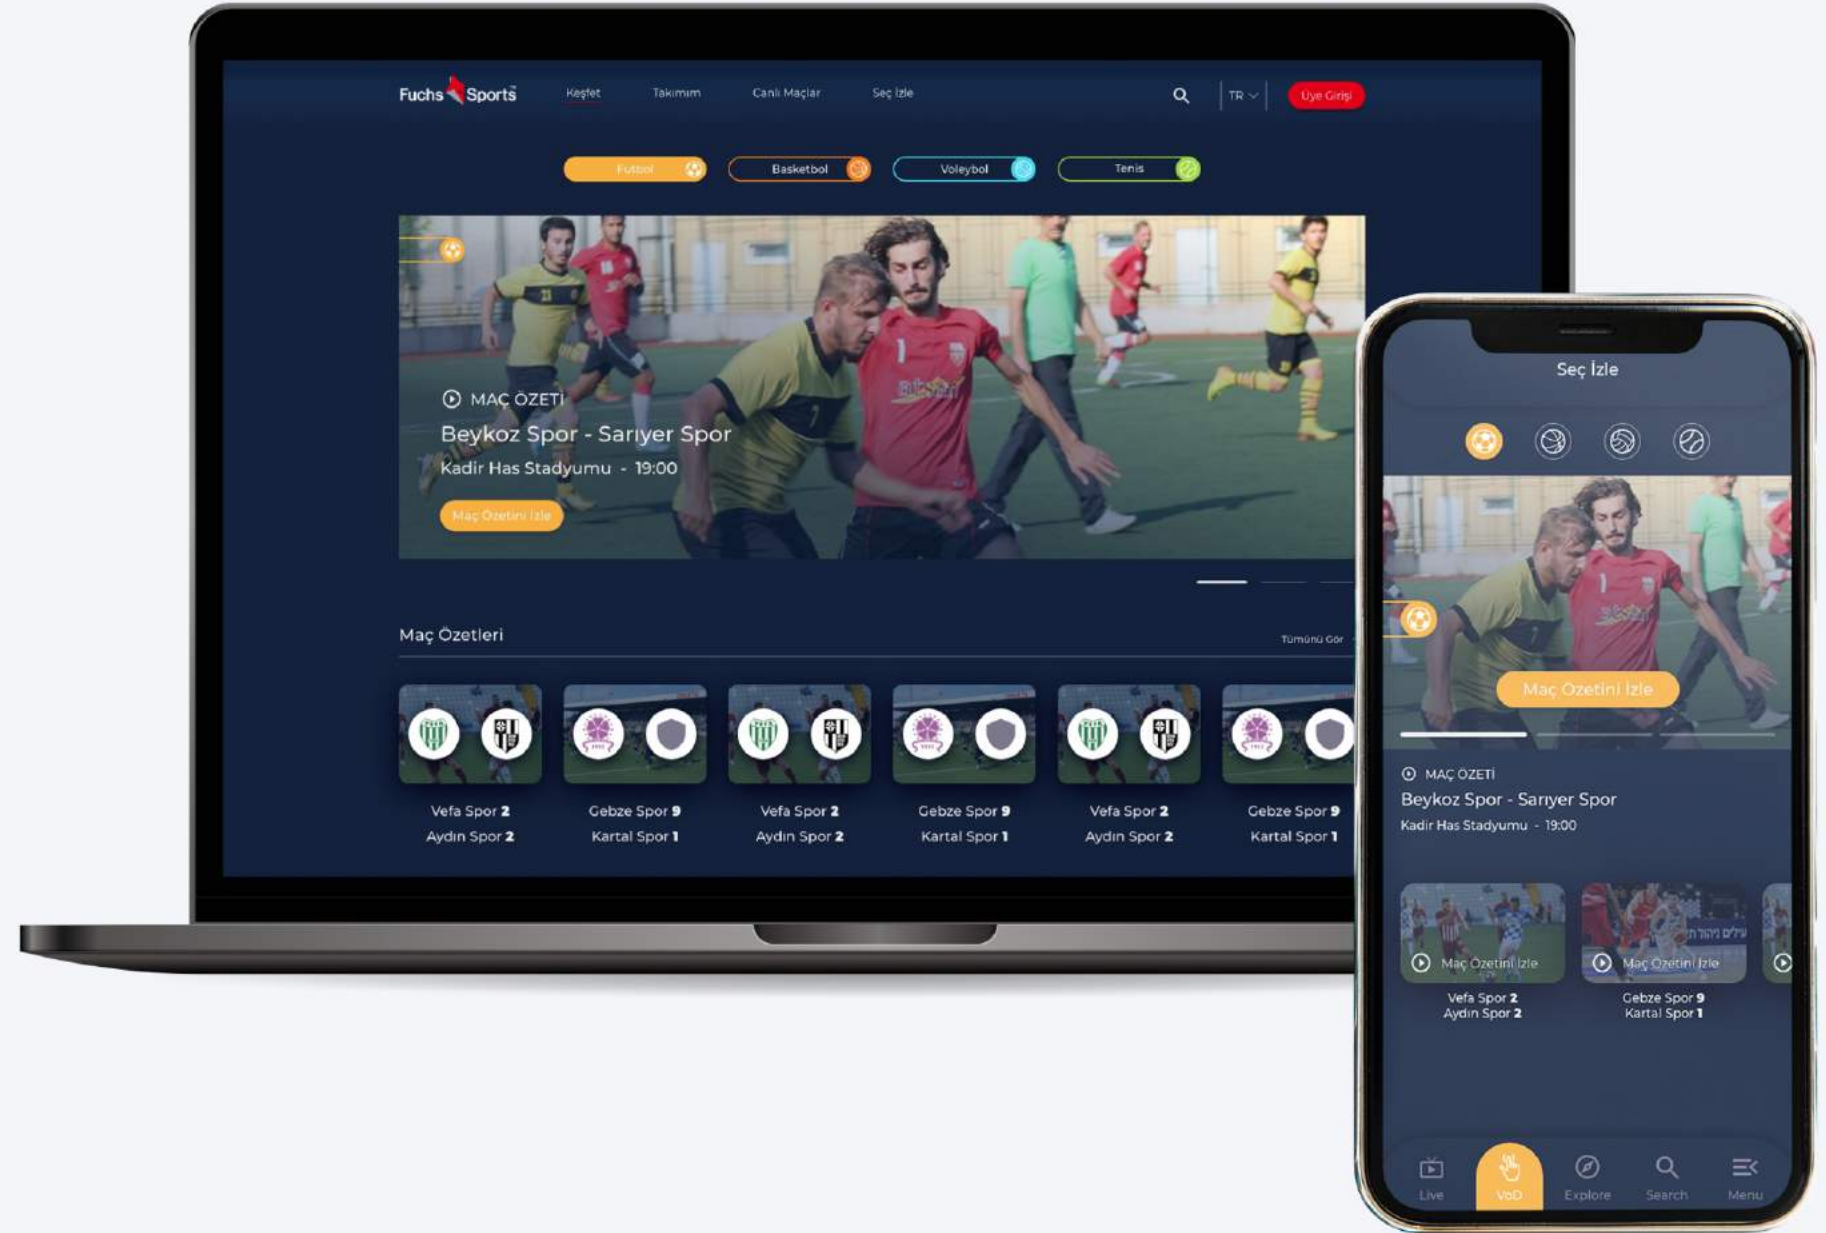

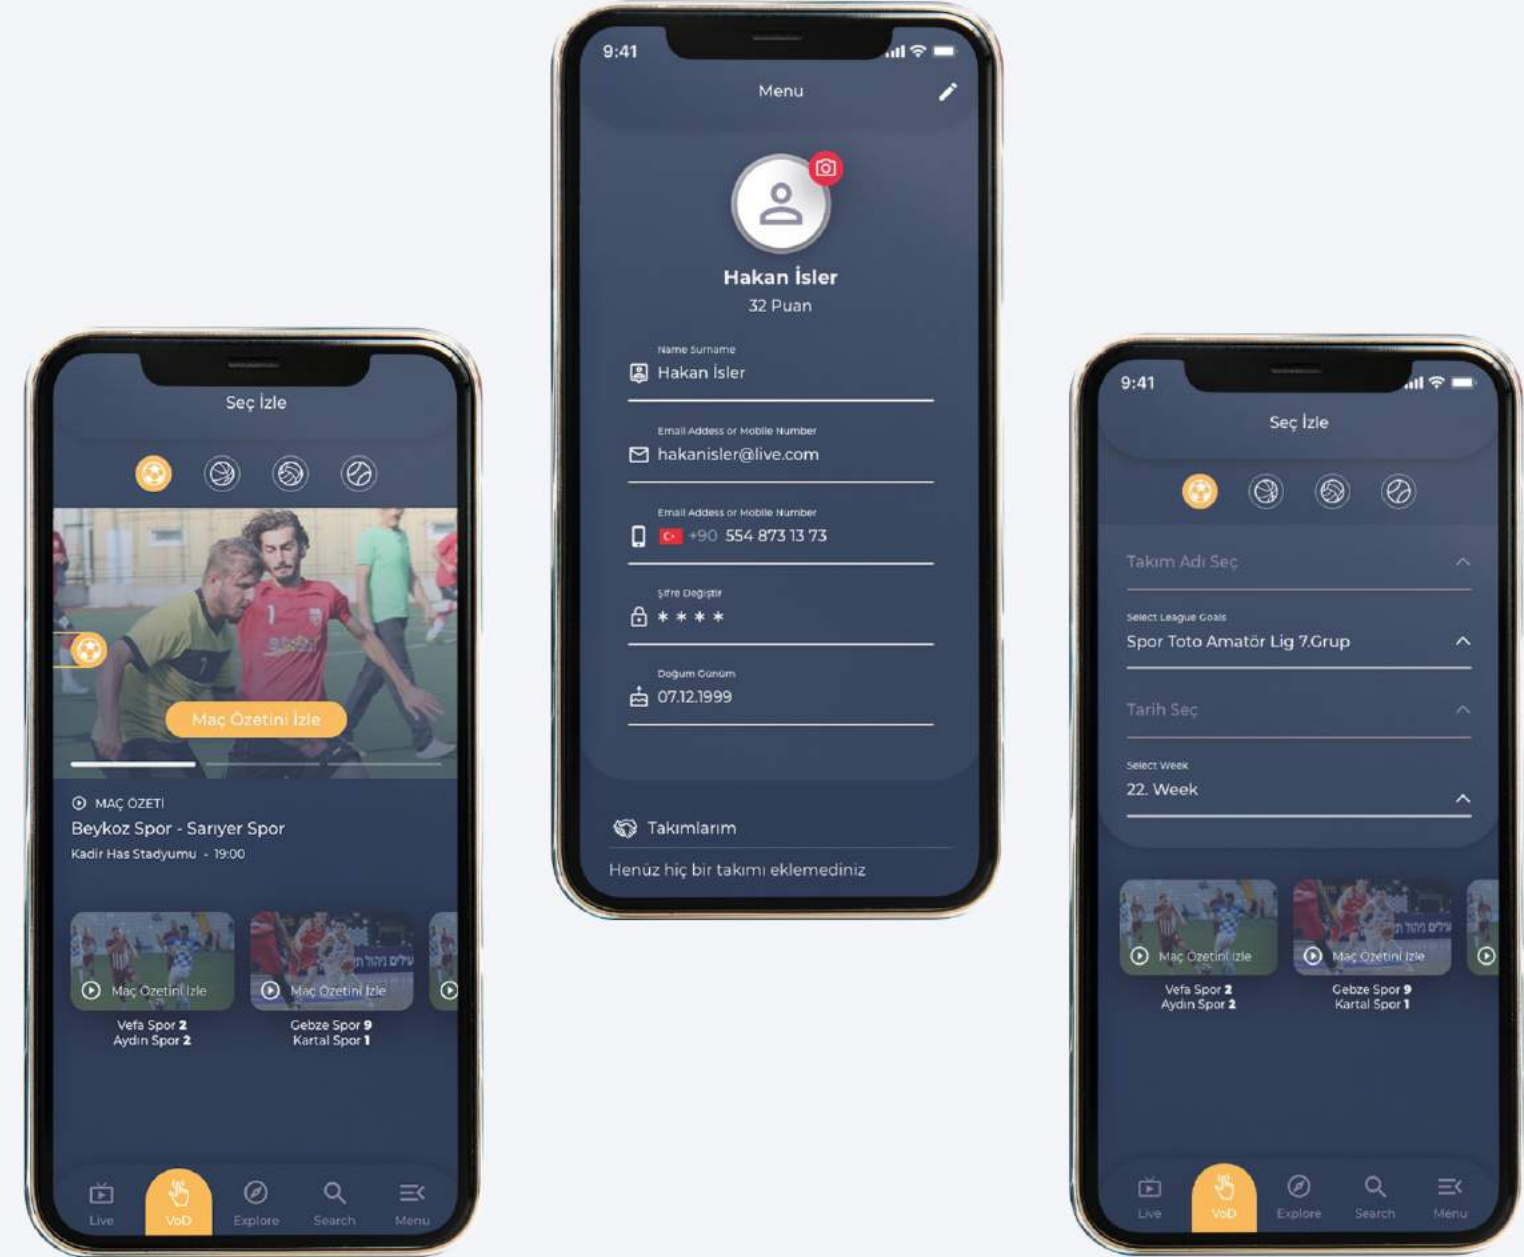

## Fuchs Sports Web Development

Fuchs Sports is a live sports streaming platform where people can sign up then follow football and basketball matches.

# Fuchs Sports

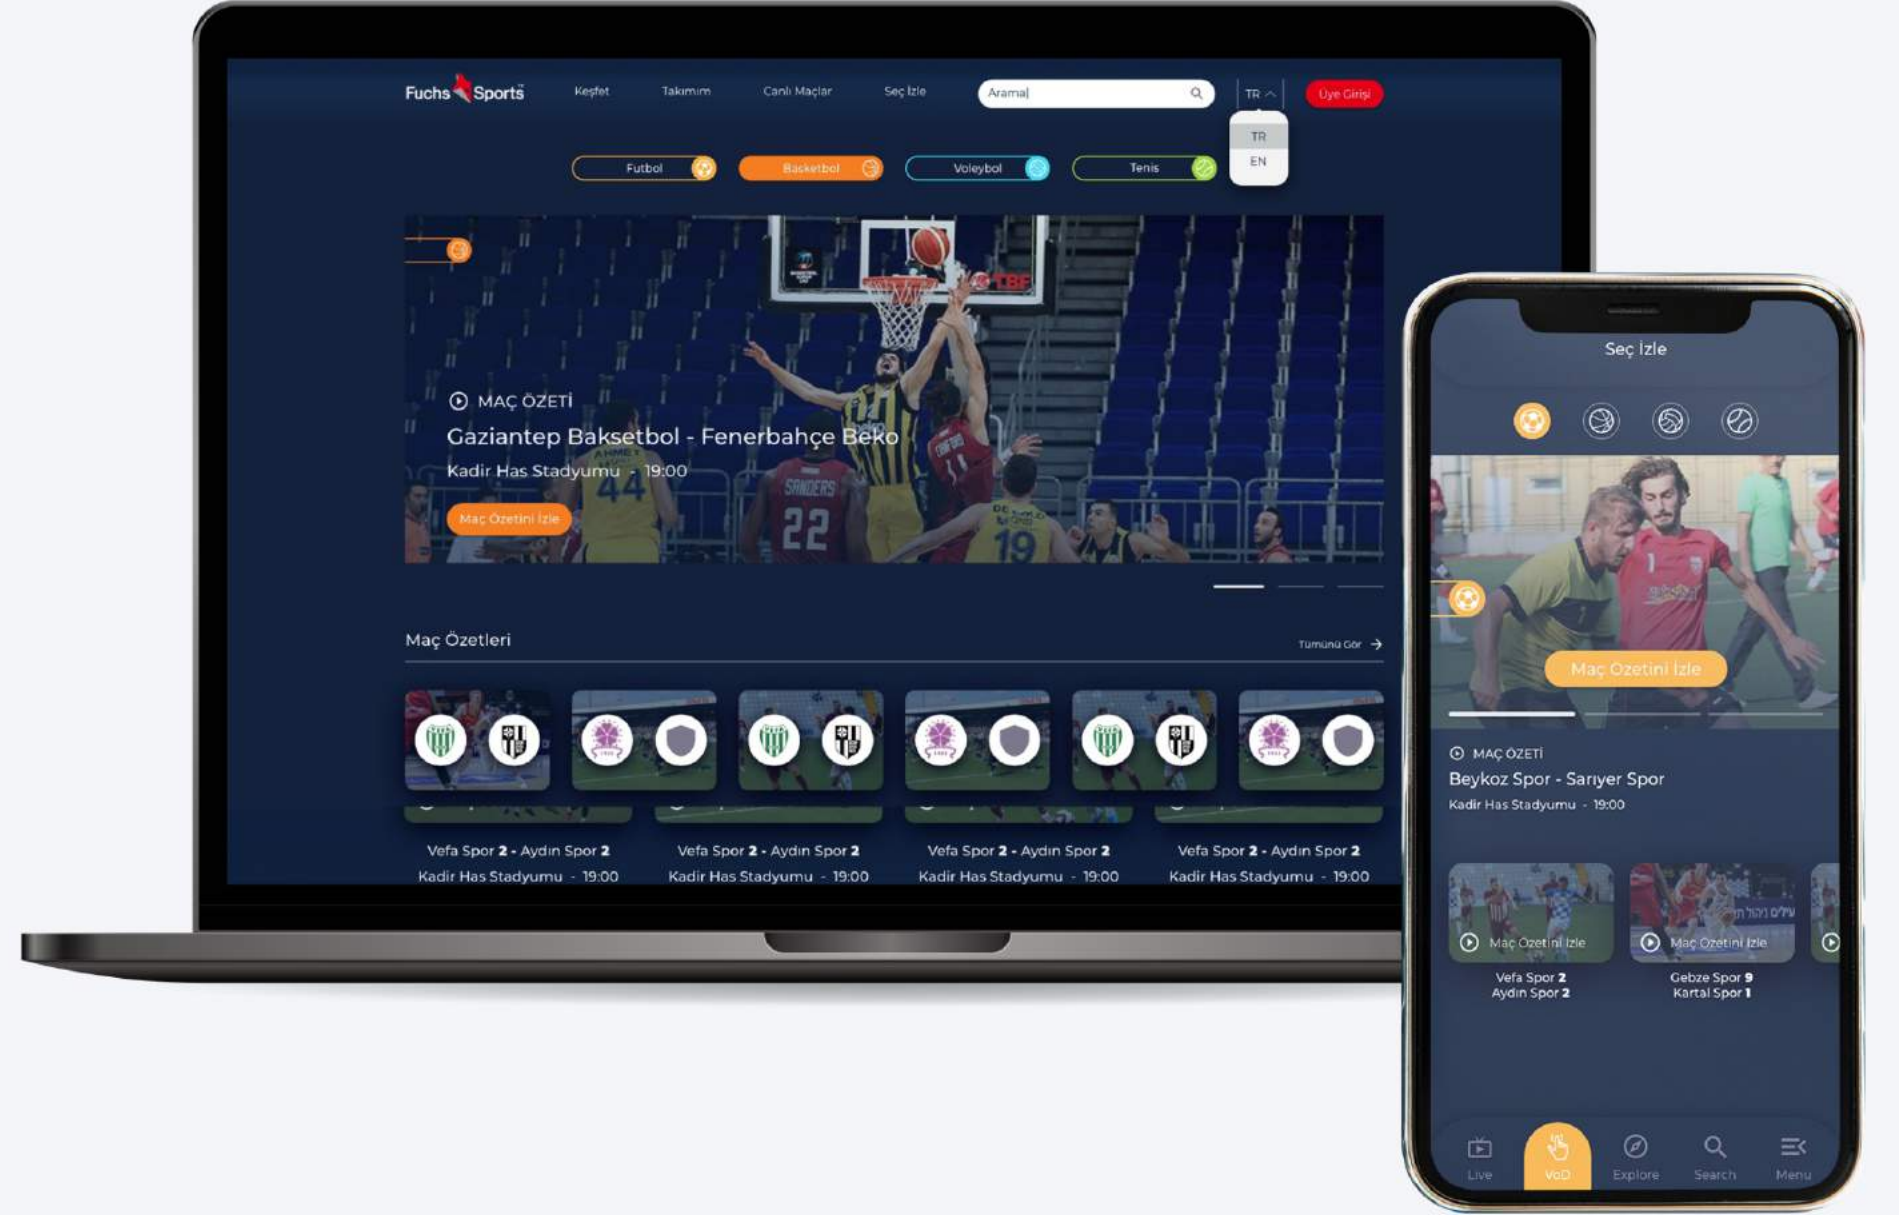

As WesterOps, we make all the fixes and updates of Fuchs Sports' web and mobile application. In addition, we integrated the basketball branch and payment system into the web and mobile application.

Download FUCHS SPORTS mobile app or visit [fuchssports.com.tr](https://fuchssports.com.tr) to watch your favorite teams online!

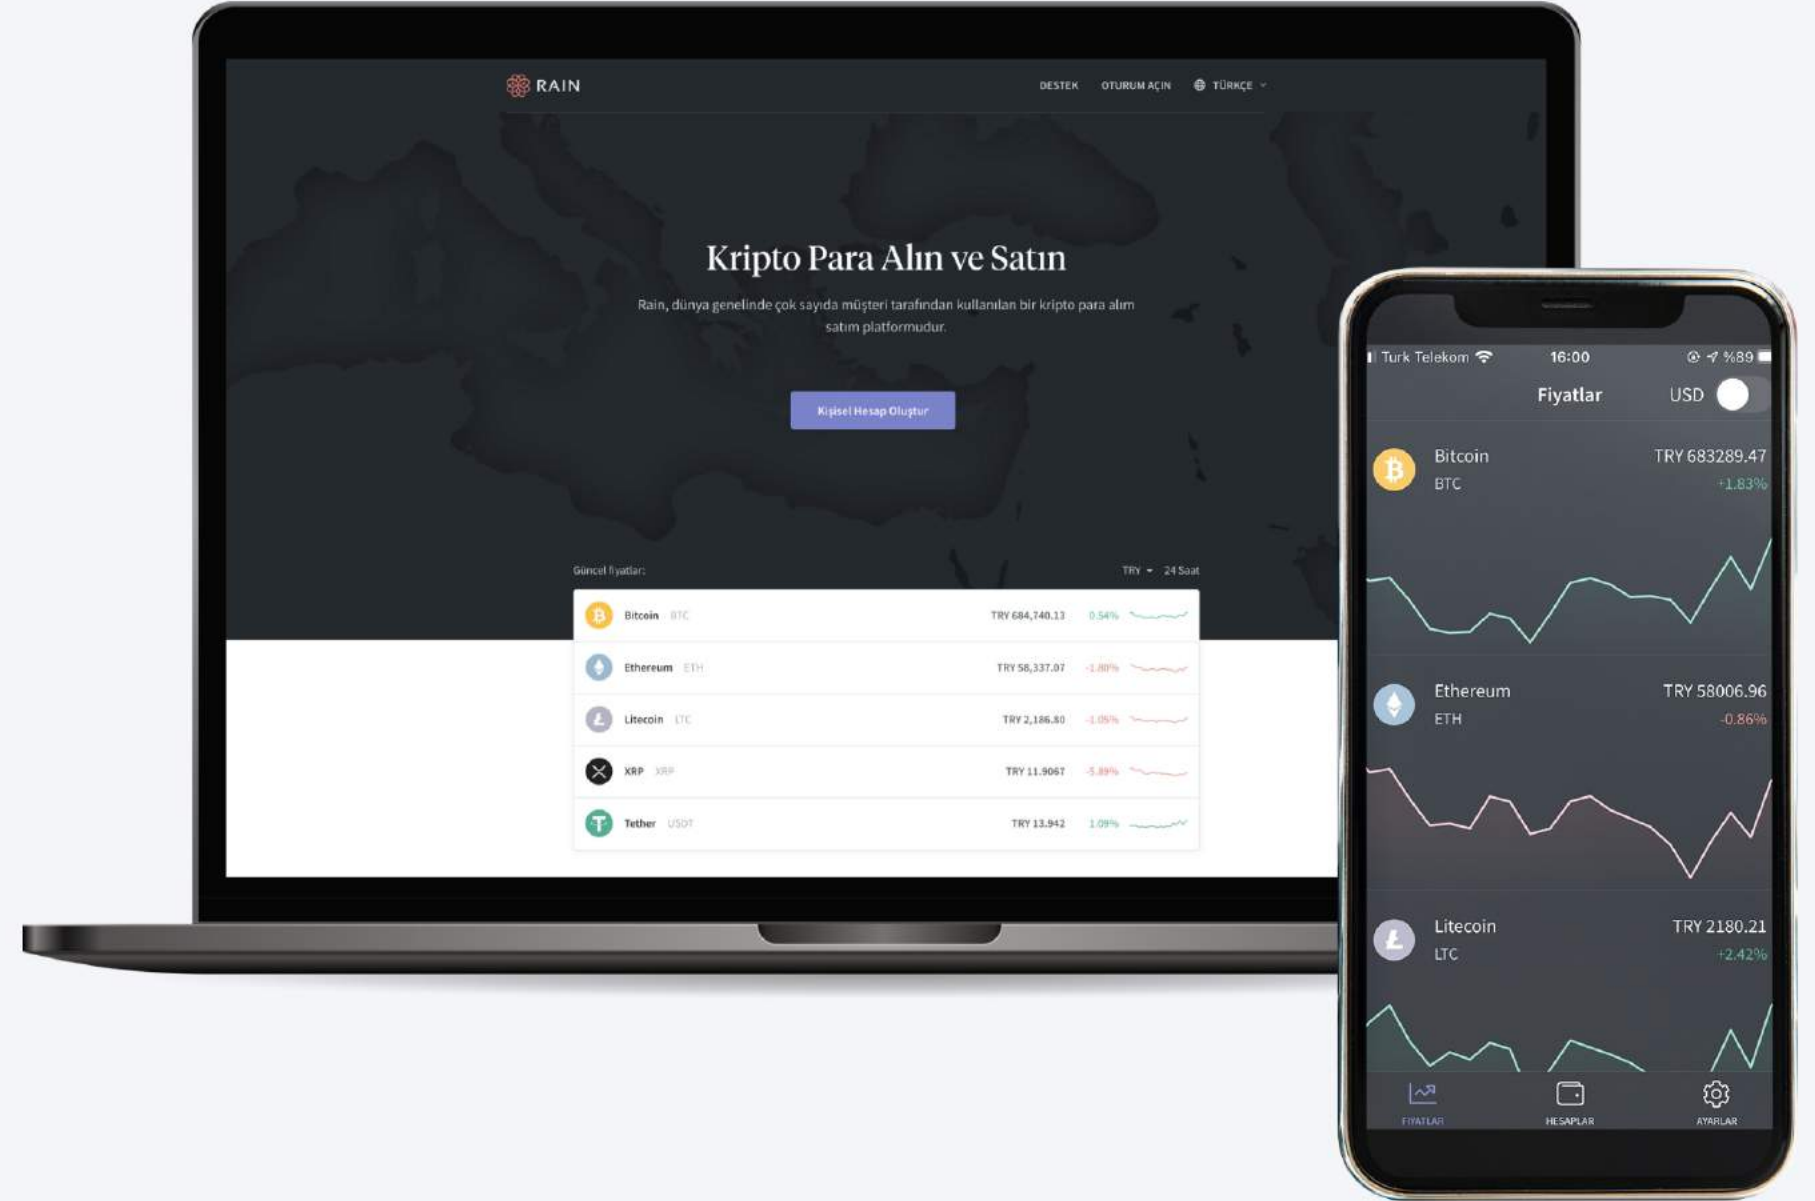

## Rain

### Web Development

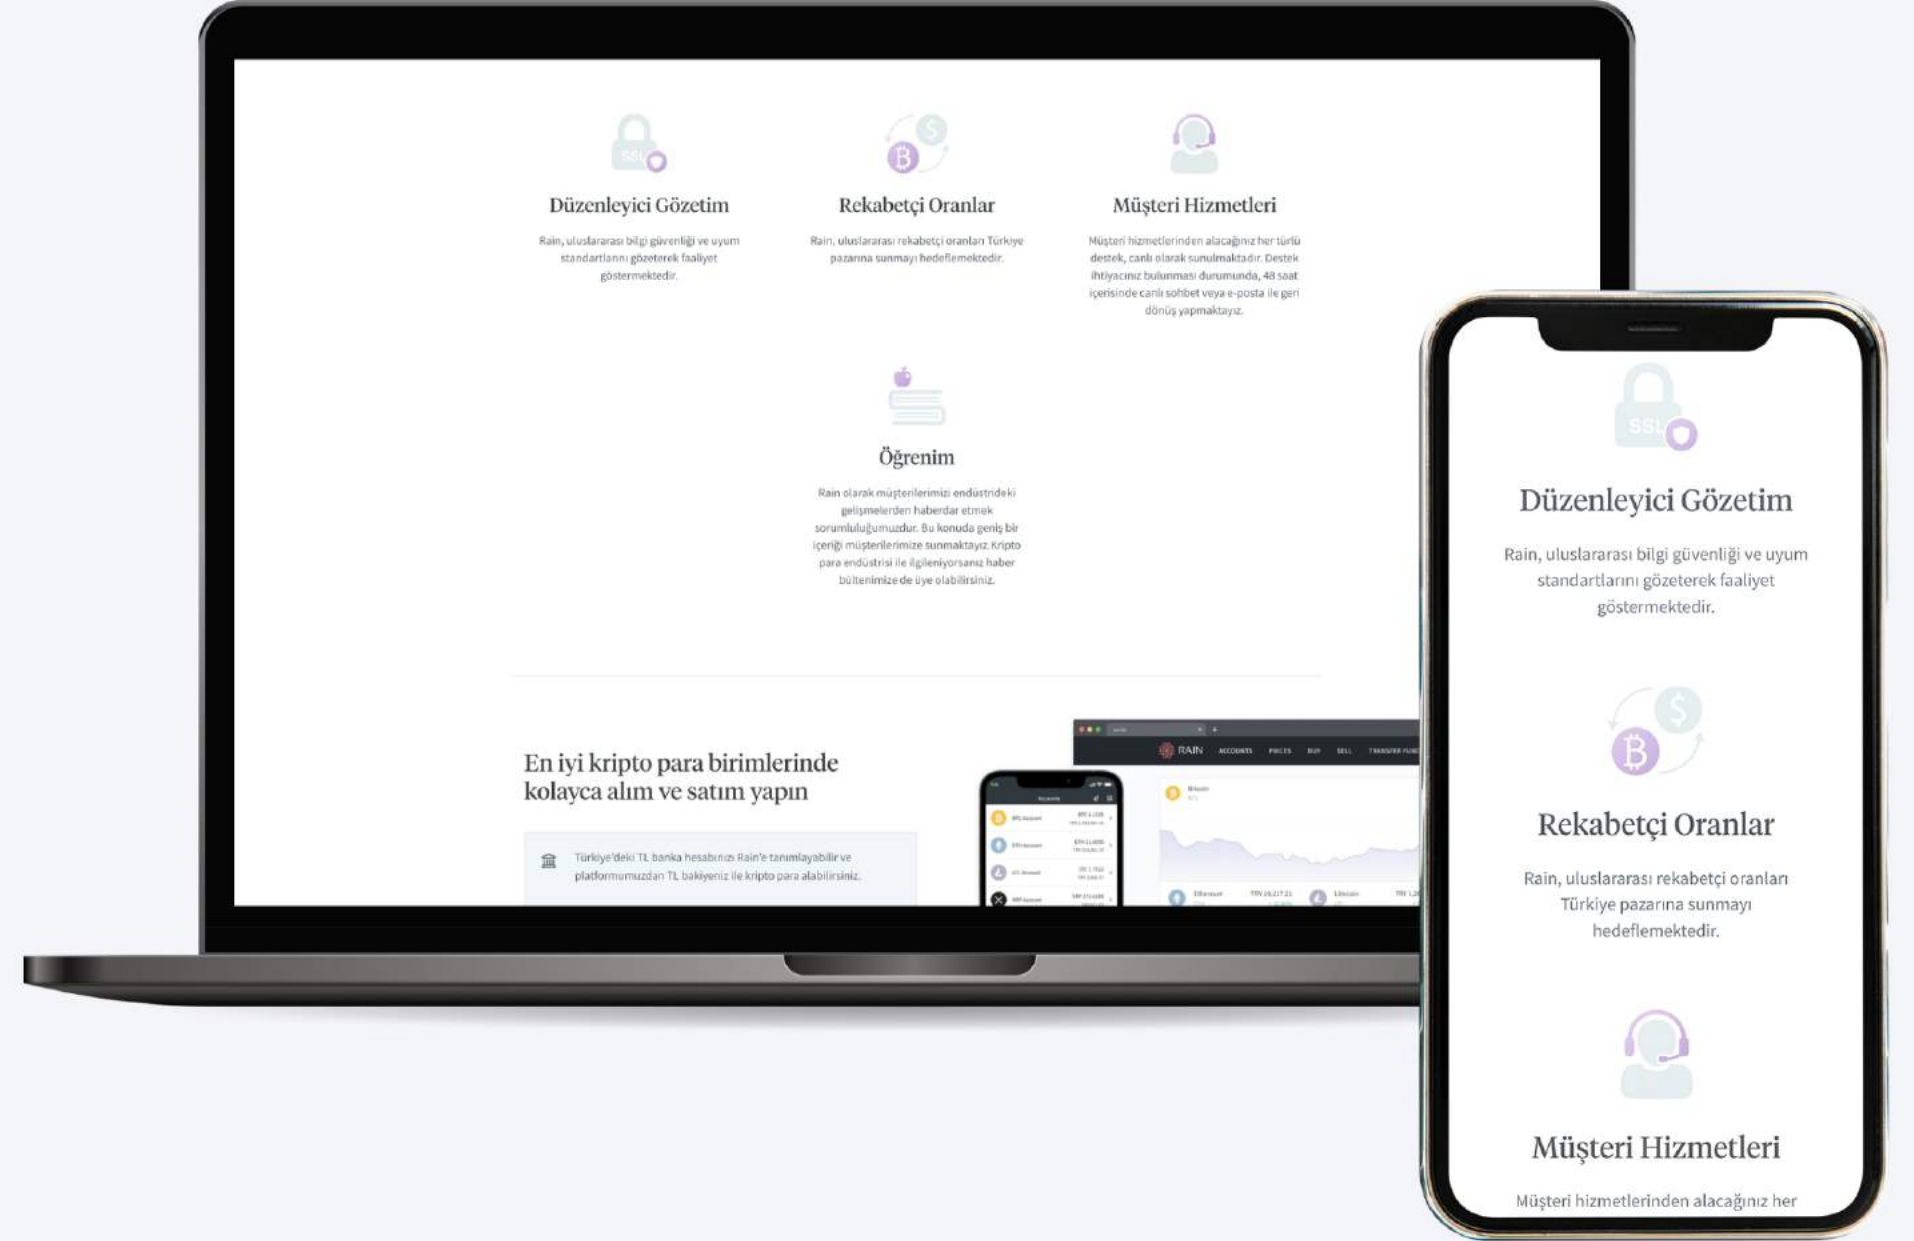

Rain is a cryptocurrency trading platform used by a large number of clients around the world.

### Rain

As WesterOps, we take part in e-invoicing integration for Rain.

### Regulatory Oversight

Rain operates by observing international information security and compliance standards.

### Competitive Odds

Rain aims to offer international competitive rates to the Turkish market.

### Customer Service

All kinds of support you will receive from customer services are offered live. If you need support, we respond within 48 hours via live chat or e-mail.

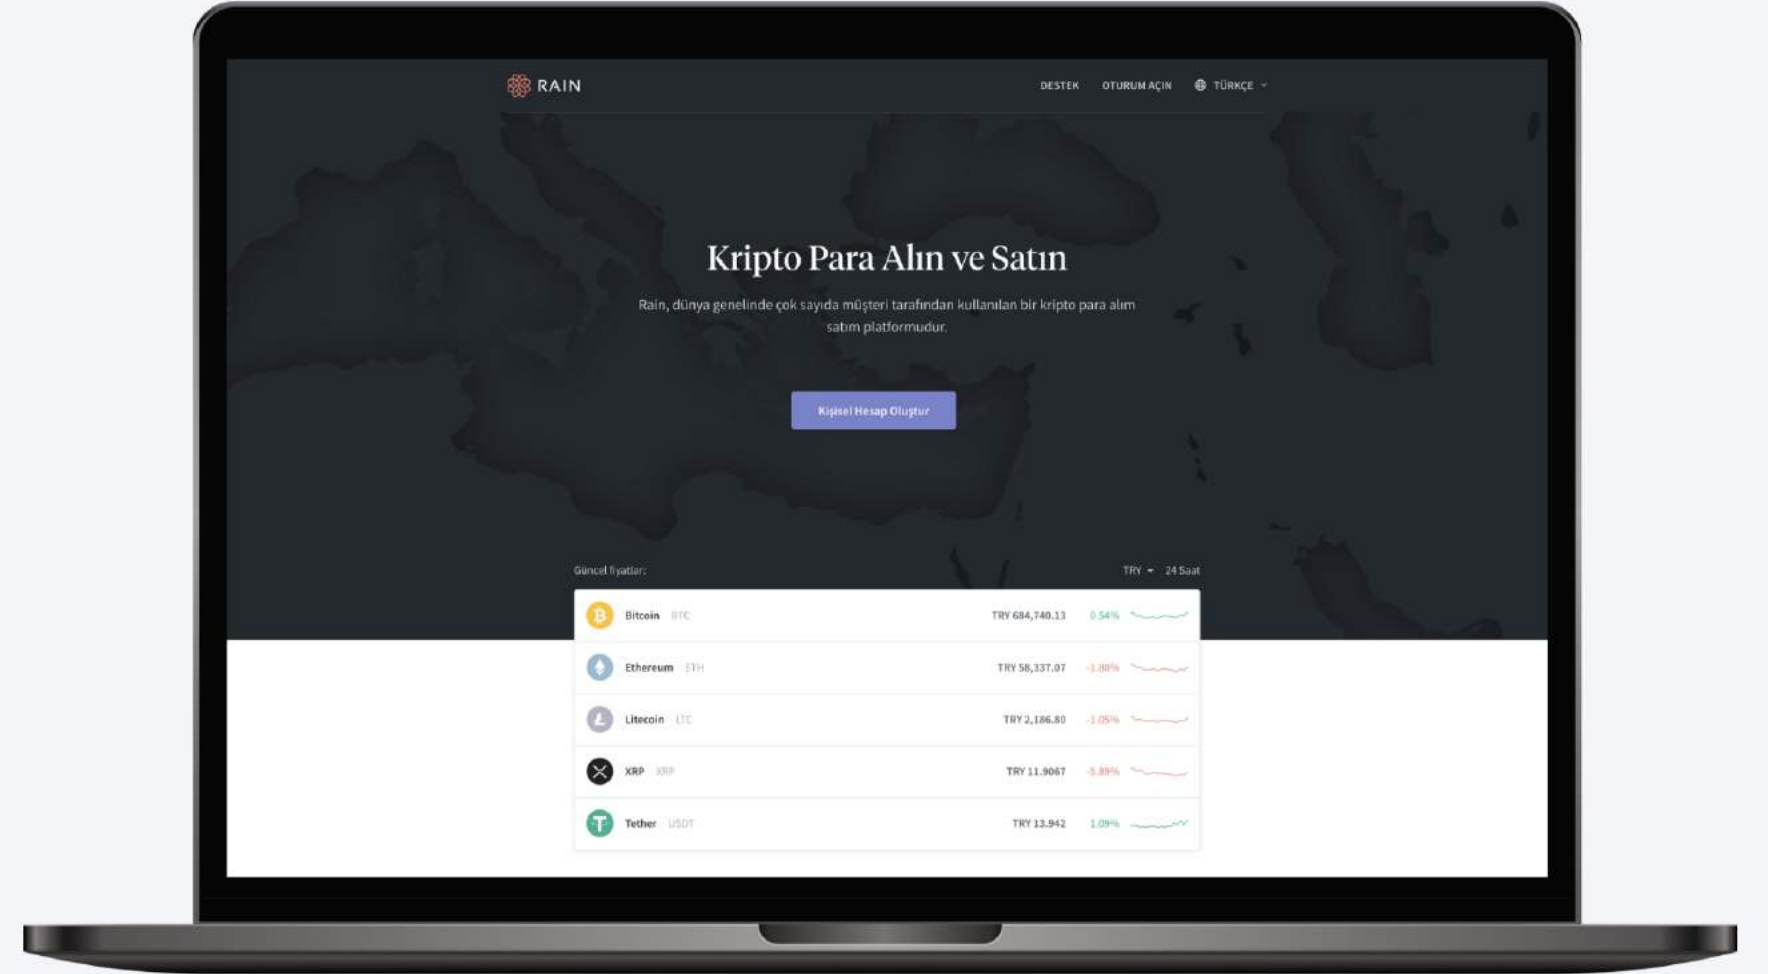

### Education

At Rain, it is our responsibility to keep our customers informed of developments in the industry. We offer a wide range of content on this subject to our customers. If you are interested in the cryptocurrency industry, you can also subscribe to our newsletter.

Download RAIN mobile app, buy and sell cryptocurrency.

## Hotel App Mobile Application Development & Design

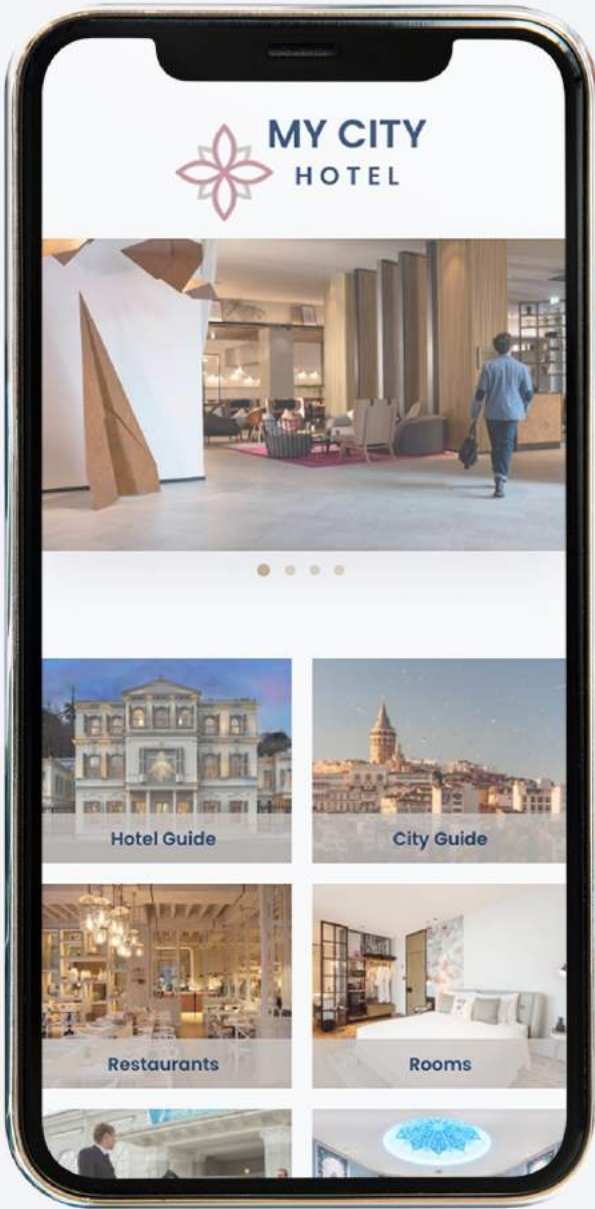

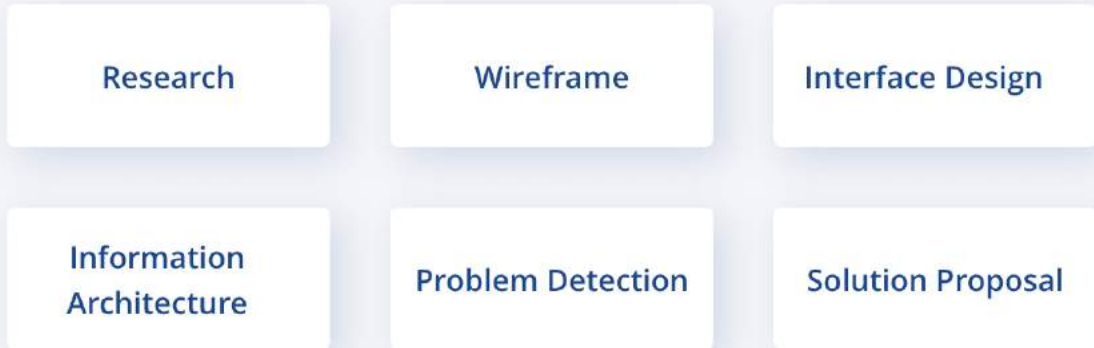

The hotel application offers fast and easy solutions to hotel customers during the reservation and their stay at the hotel, such as city guides, in-hotel services and car rental services.

# Hotel App

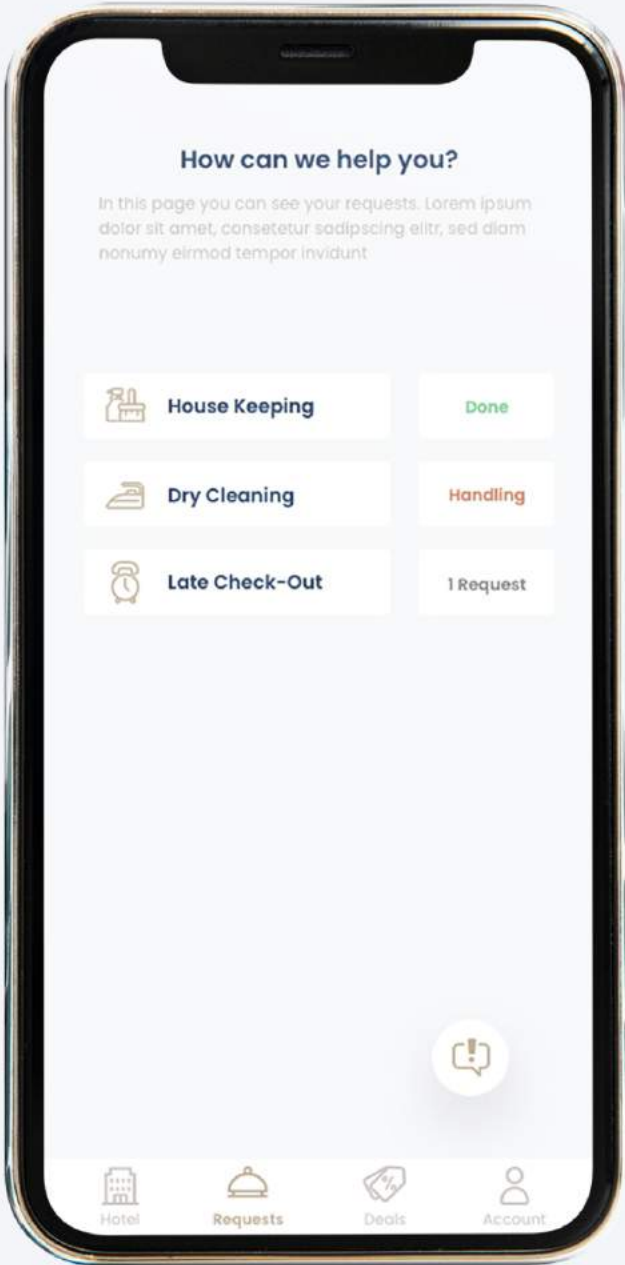

We started the design process by understanding where the users had problems, what they did not want, what they liked more or simply their needs and behaviors. After designing the information architecture and flows, we designed stylish interfaces that support the brand, in line with current trends.

# Hotel App

## Requests

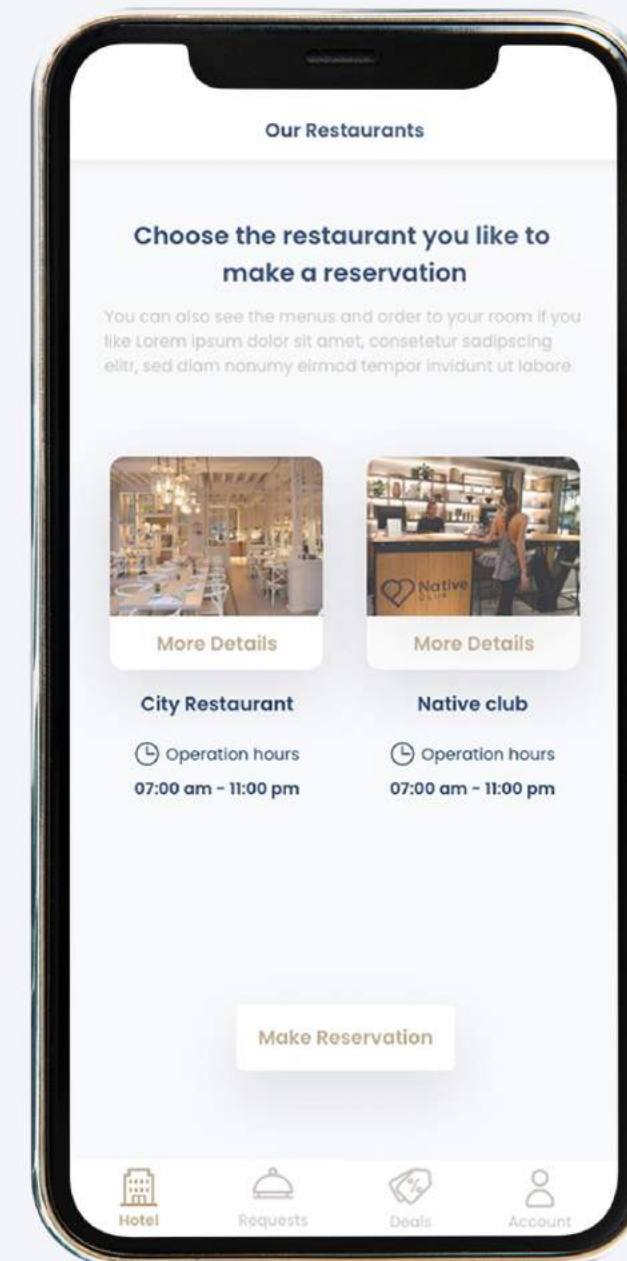

Functions were determined in line with the needs of the user group through idea development studies. The “requests” experience, which can prevent the language problems of hotel customers while explaining their requests on the phone, was added to the application flow. Thus, the user has become able to make requests through the application and check the status of the request.

## Hotel App

### Creating a Reservation

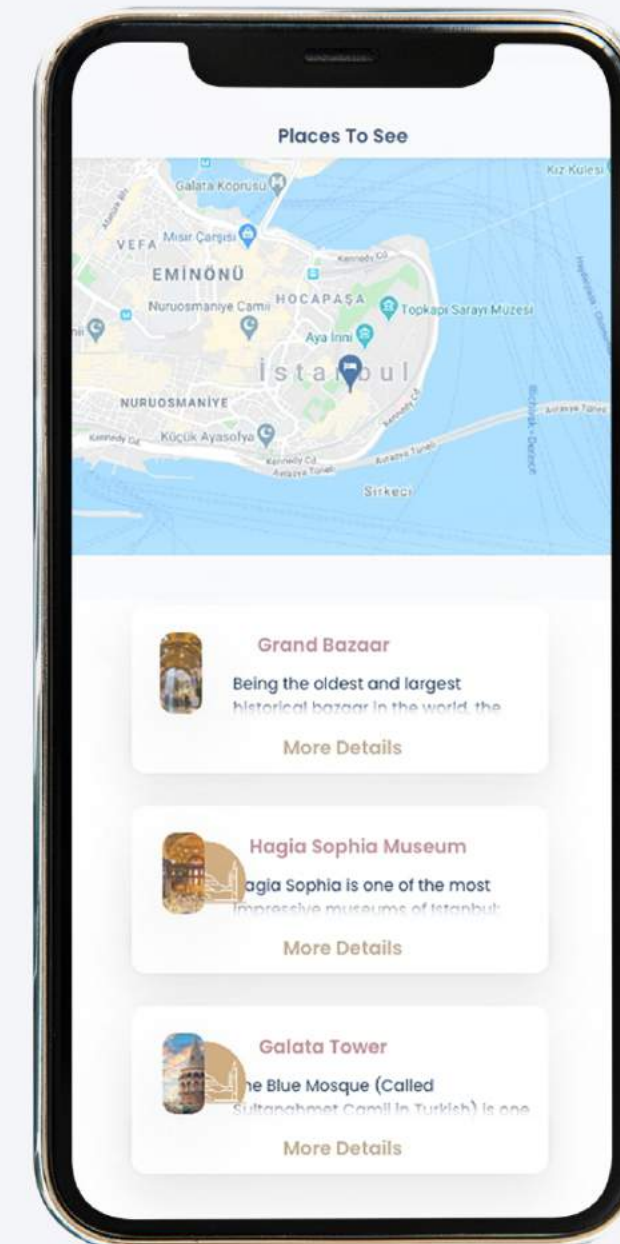

Functions that differ according to hotel facilities have been customized within this application. Thus, users can reach their needs such as hotel restaurant reservation, rental car / transfer reservation, spa reservation through the application.

# Hotel App

## City guide

Users can view the places to visit on the map in the city before / after their arrival, if they wish, reserve a guide or transportation for the places.

HOTEL APP mobile application is on application markets very soon!

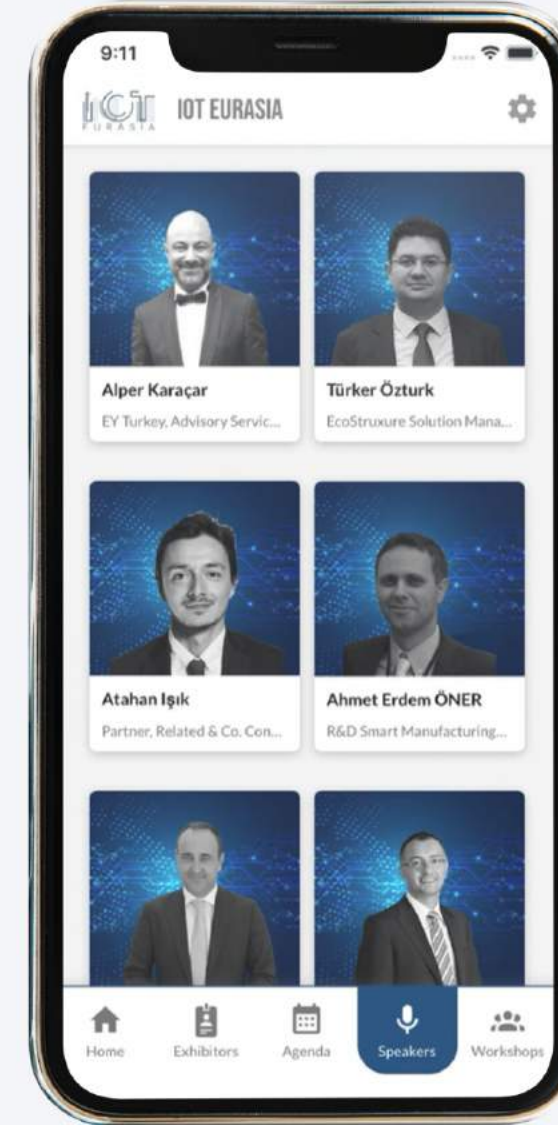

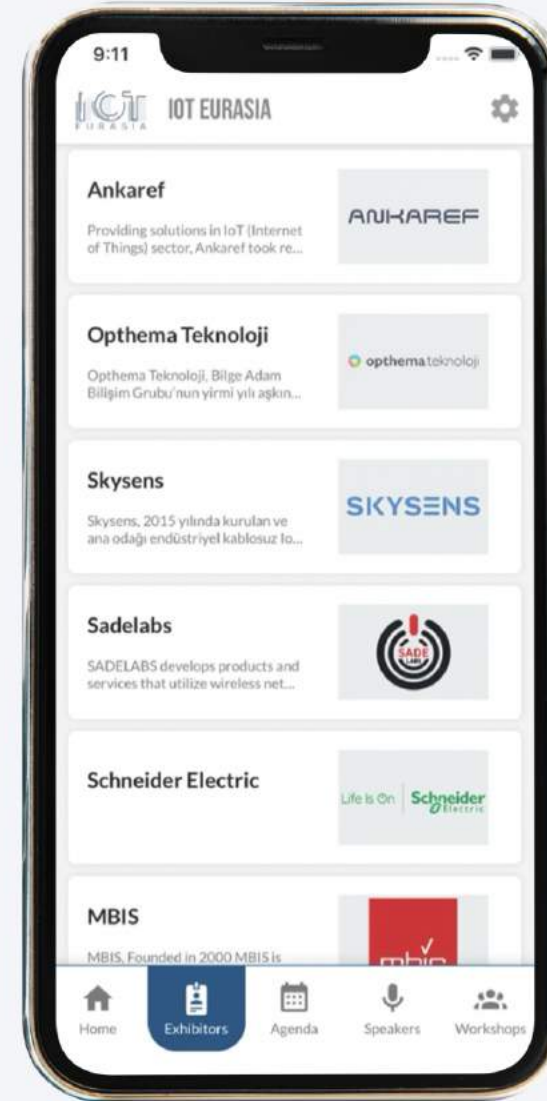

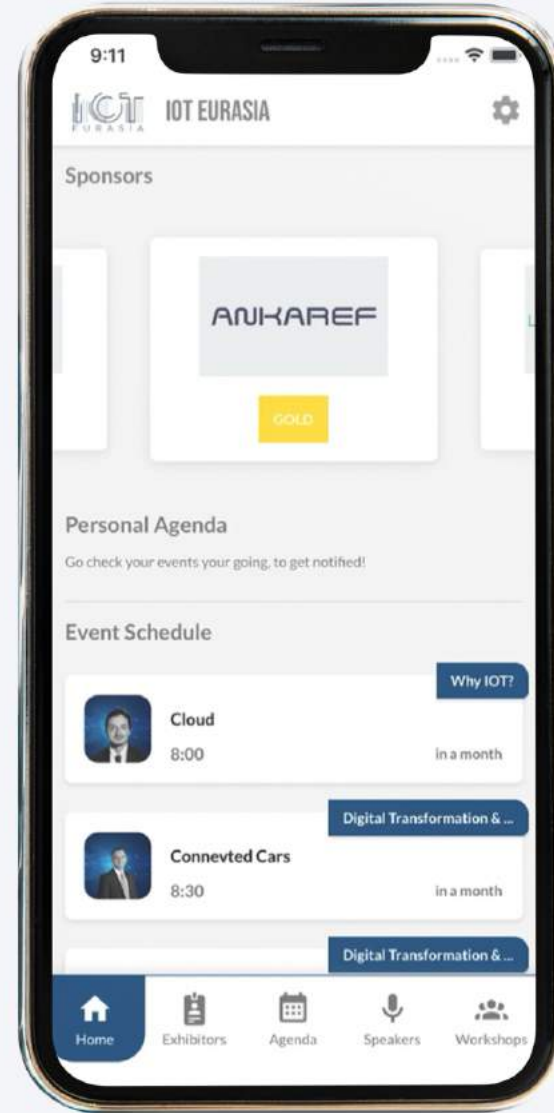

## WWPS Events Mobile Application Development

We developed an event management application called WWPS Events. WWPS Events enables you to create successful virtual or in-person events with a user-friendly event management platform and a powerful mobile event app that is beneficial for your attendees before, during and even after the event.

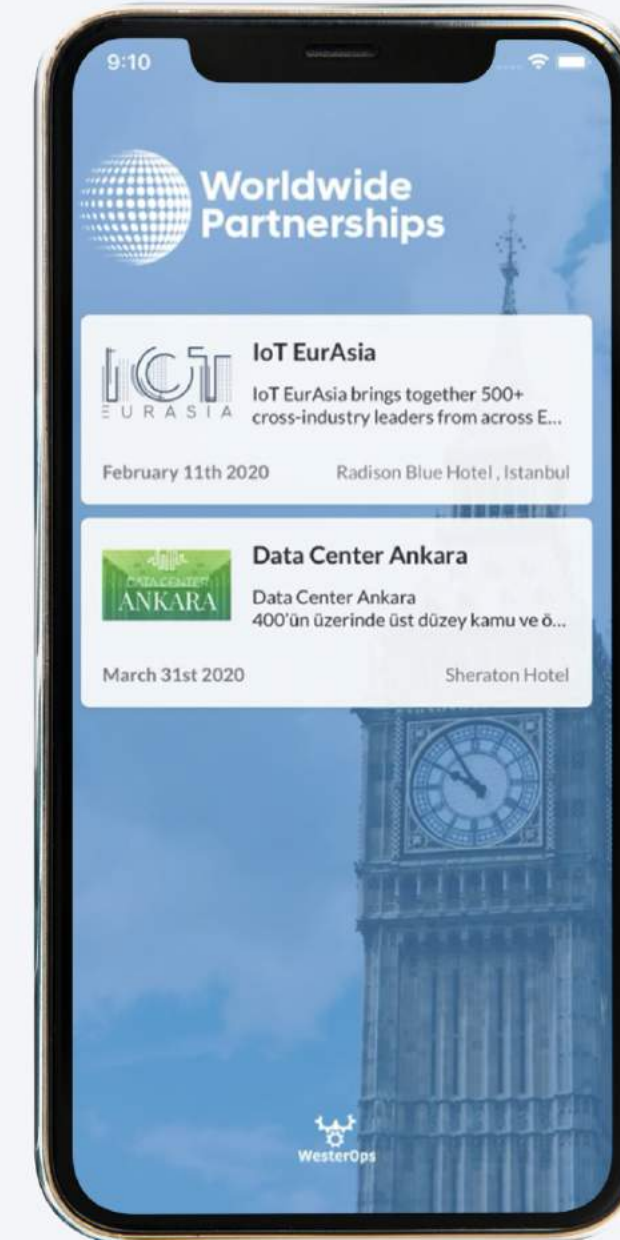

You can download WWPS Events on both your IOS and Android devices.

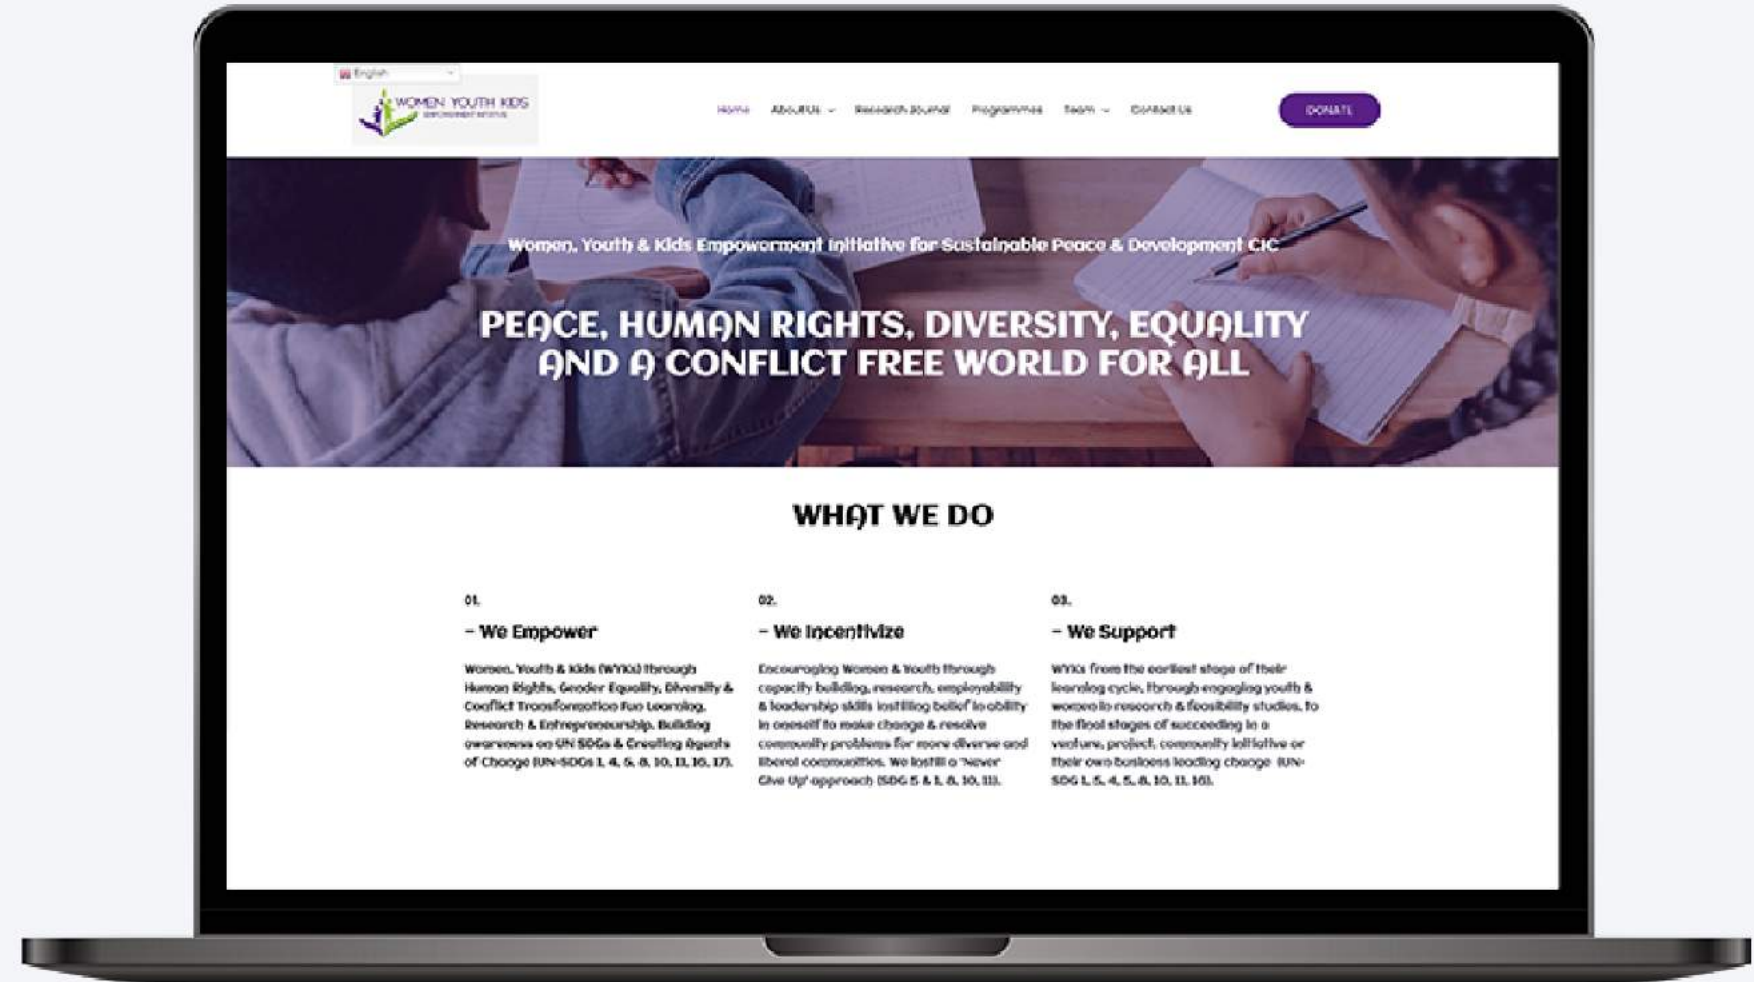

## Wykei

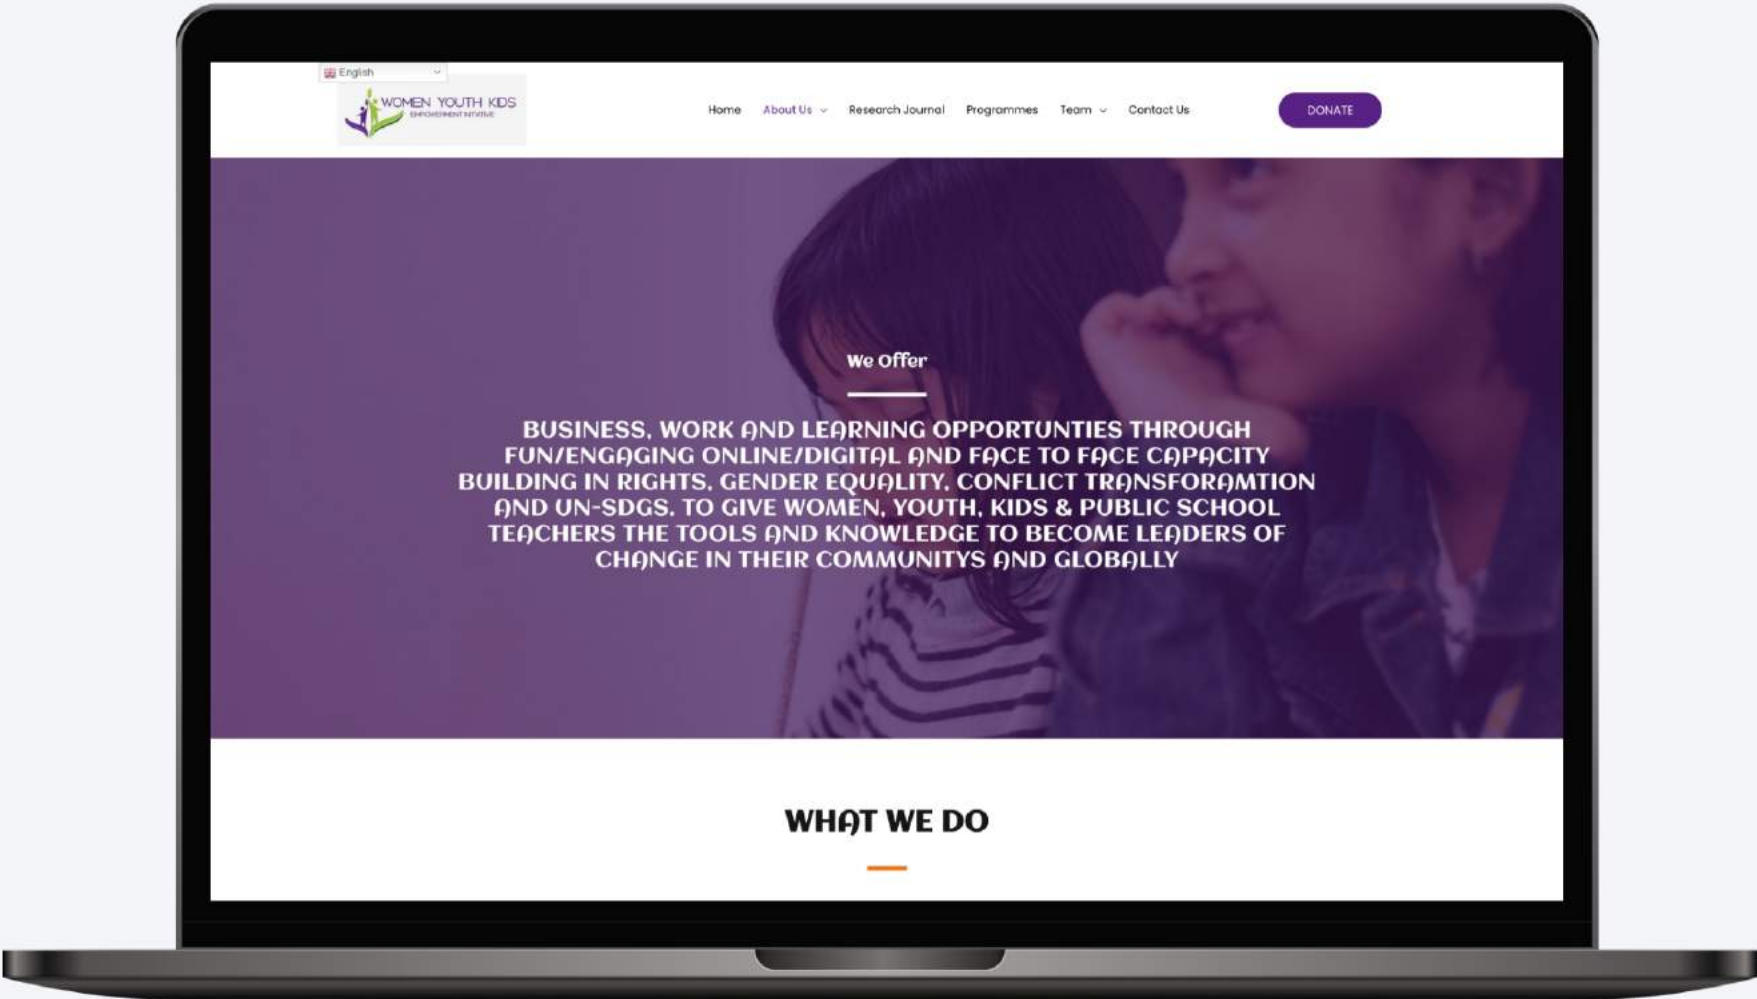

### Wordpress Design

WYKEI (Women, Youth, Kids Empowerment Initiative) is a non-profit Community Interest Company established in order to achieve the sustainable development goals through empowering women, youth and kids globally.

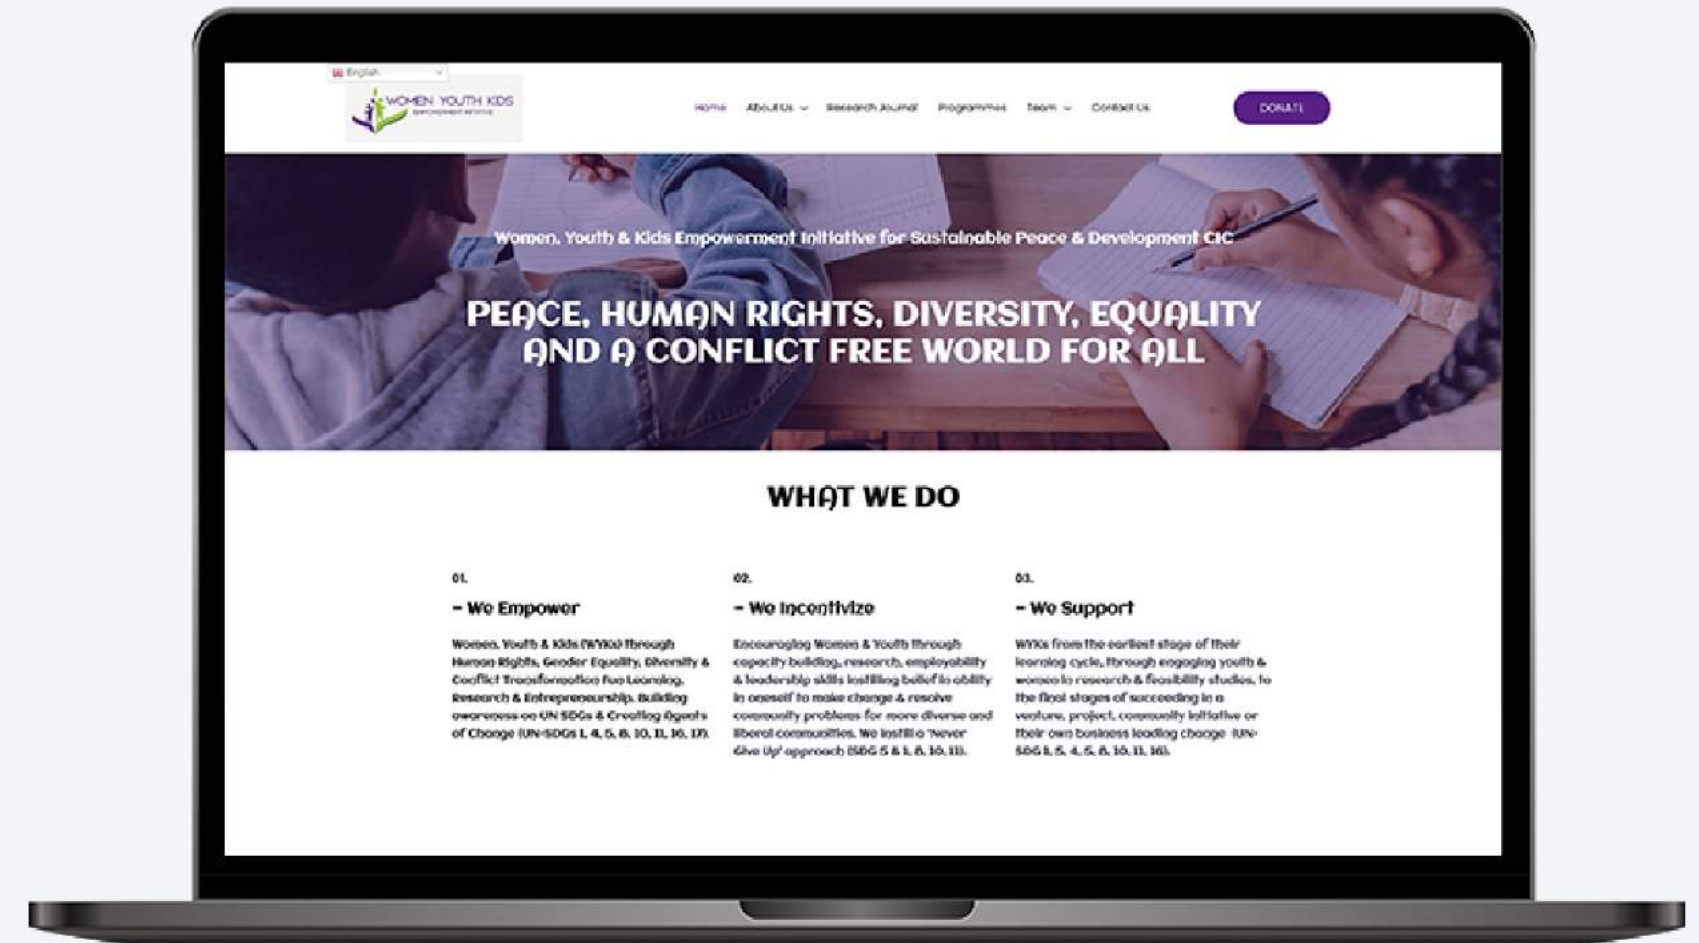

# Wykei

As WesterOps, we built an interactive website with Wordpress from scratch which includes donation plugin integrated with PayPal.

WYKEI is available on [wykei.org](http://wykei.org)

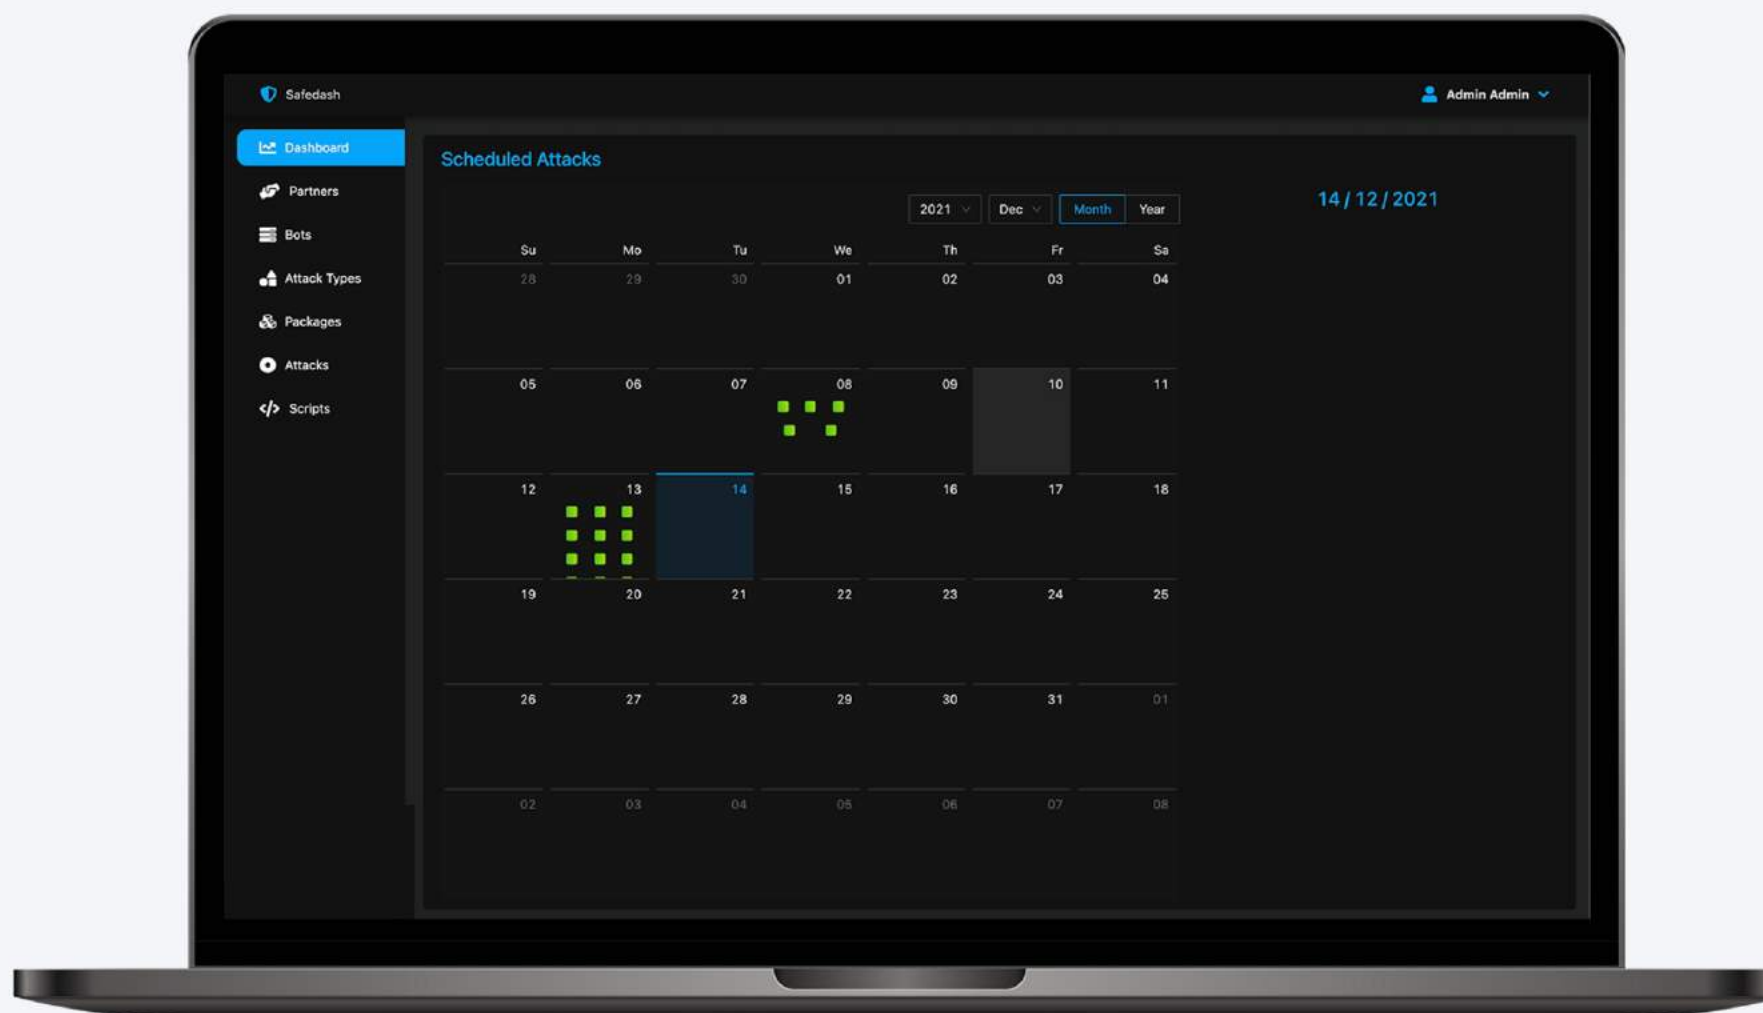

# Safedash

## Cyber Security Platform

Safedash is a cyber security platform.

We created bot machines and uploaded specially written scripts to them. These bot machines' goal is to attack to the ip, port and url given.
